
The report of the membership committee showed a gain in membership for the organization, and the treasurer's report showed a net balance of over $40,000 on May 1.

Right to Sell.—Widespread interest in the trade has been aroused by the recent decision by Federal Judge Manton, in the United States Circuit Court of Appeals here, in setting aside and reversing the order of the Federal Trade Commission made last January, designed to compel the National Biscuit Company and Loose Wiles Biscuit Company to sell to buying exchanges and other pools on the same basis as wholesale distributors. The court, in its opinion, reiterated the right of any producer or distributor to freely exercise his own discretion in both buying and selling. According to the decision, he may trade or refuse to trade with anyone, as he sees fit, for any reason or for no reason, provided, of course, that he always acts independently. The court further pointed out that buying exchanges are not organized to sell, but only to buy. The buying pool of retail grocers, said the court, does not render the manufacturer any more service than the members individually, whereas the chain stores not only render a valuable distributive service, but also by their advertising help the sale of the various manufactured products distributed by them. The retail growers of the country were behind the Federal Trade Commission in its campaign to force the cracker manufacturers to recognize the retail grocers' co-operatives and buying pools as legitimate wholesale buyers, on the same basis as the chain stores. The way the situation turned out, however, the retail grocers have provided not only a clean bill of health for the chain store grocers, but in addition have given them a boost, through the wording of Judge Manton's decision.

Several excerpts from thhe court's ruling of interest to all canners and wholesale grocers alike, follow:

> "While a chain store owner may handle more crackers because of his ownership of more than one store, this is but the result of healthy competition.
>
> Effective competition requires that merchants have freedom of action in conducting their own affairs.
>
> The law against unfair acts can have no appliion unless the unfair act substantially lessens competition or tends to create a monopoly in any line of commerce. It was never intended by Congress that the Trade Commission would have the duty and power to judge what is too fast a pace for merchants to proceed in business and compel them to slow up. To do so would be to destroy all competition except that which is easy.
>
> A pool is organized merely to buy and not for selling purposes. By pooling purchases the retail customers of the petitioners could afford no service in the sale of the petitioner's product to the consumers beyond that which each furnishes individually."

The National's Convention.—With the American Wholesale Grocers Association Convention in full swing at Dallas this week, trade interest will next turn to the meeting of the National Wholesale Grocers Association in Chicago, May 27-30, inclusive. Among the speakers at the National meeting will be Royal F. Clark, president of the National Canners Association; W. W. Frazier, Jr., president of the American Specialty Manufacturers Association; Charles P. Whiteman, president of the National Food Brokers Association; Dr. Melvin T. Copeland, director of the Harvard Bureau of Business Research; Sylvan L. Stix, of Seeman Bros., New York city; Arjay Davies, of Easton, Pa.; L. W. Mallory, E. F. Brewster, Arthur P. Williams, John D. Houston, Roy L. Davidson, D. H. Bethard, A. L. Baker, Jacob Blumlein, John H. Miller, John W. Morey, Amos E. Ayres, Frank R. Wood, Jr., Egbert B. Hawk, S. O. Meyer, O. J. Moore and Leslie Lieber. "Phil" Staib, of New York city, will be toastmaster at the annual banquet.

Price Cutters—Wholesale grocers in all parts of the country have for the past few years been complaining of "cut throat" competition on the part of some of their competitors, and considerable has been said and written on the subject of price cutting in the grocery trade. H. A. Perfect, of A. H. Perfect & Co., of Fort Wayne, Indiana, comments interestingly no the fallacy of price cutting in a recent letter, in which he says:

"We have learned that no matter what our price on any article, we can not sell all of it, but our competitors are going to sell some at a higher price. Take our best salesman for instance, and it is doubtful if five per cent of his trade buys exclusively of him. This being the case, why worry because some other jobber sells a customer some of the items on which he has a low price, for the customer is not going to buy everything of us any way. This being the case, why not let him buy of our competitor some of the things that we do not want to sell this merchant. Even if we do enjoy the greater part of his business and he gives us the heavy stuff like sugar, tobacco and cereals and some other things, by the time he has given us what appears to be a good order (and it is from the dollars and cents viewpoint), he begins to hold back, saving something for some of his other friends and naturally after we have sold him all of the unprofitable items, he is going to save for our competitor, who is also his friend, the profitable items. Our idea is to reverse this operation. If he must give some of the business to his friends, let it be that portion which we do not want because it is unprofitable."

The J. C. Felstenthal Company, Memphis wholesale grocers, have purchased the stock and good will of the White-Wilson-Drew Co., wholesale grocers, also of Memphis. The Felsenthal Company is now occupying the building formerly occupied by the White-Wilson-Drew Co. The Felsenthal Co., which operates branch houses at Jackson, Tenn., and Humboldt, Tenn., entered the Memphis market five years ago, purchasing the business of the Davis-Mize Grocery Co. The company originally started in the wholesale grocery business at Jackson. The White-Wilson-Drew Co. had been in the wholesale grocery business in Memphis for twenty years.

Another merger in the ranks of wholesale grocers is reported, the General Grocer Co. of St. Louis having taken over the business of the Niehoff Grocery Co., also of St. Louis. The General Grocer Co. is made up of three of the leading St. Louis wholesale grocers; Amos-James Co., Scudders-Gale Grocer Company, and the Hass-Lieber Grocery Co. The Amos-James Co., branch of the business will occupy the building and warehouse formerly occupied by the Niehoff Co. at Eighth and Spruce Streets. The combined sales volume of the General Grocer Co., is expected to total $20,000,000 annually.

W. T. Bolton, manager of the Denton, Texas, branch of the Boren-Stewart Co., of Dallas, Texas, has been appointed a vice-president of the concern.

Trade Items—The Great Atlantic & Pacific Tea Co., this week announced awards totalling $3,000 in its contest recently conducted, in which the public was asked to contribute criticisms and suggestions on operation of the A. & P. stores.

The Bell Grocery Co., jobbers of Pineville, Ky., are establishing a new branch house at Baxter, Ky.

The Charles Ilfeld Co., wholesale grocers of Albuquerque, New Mexico, have bought out the Gallup Mercantile Co., of Gallup, New Mexico, and will conduct the latter house as a branch.

P. N. Green, Jackson, Mississippi wholesale grocer, has just taken out group life insurance on all of his employes.

Fleek & Son Co., Newark, Ohio, wholesale grocers, have just celebrated their sixty-third anniversary.

The American Wholesale Grocers' Association is holding its annual convention in Dallas this week.

Aberdeen N. C. "We have set $3.00 a dozen on N. C. Extra Fancy Dewberries for July delivery", writes the Carolina Canning Co. "Our berries are probably superior to any other berry. They bring very high prices for the fresh fruit on the northern markets. This year we are opening a plant to handle 2000 cases per day in order to put the berry on the market in cans".

What The Brokers Say.

Baltimore, May 15, 1924.

During the past ten days the market on all canned foods has been dull, very little life in either spots or futures. The commodity most in demand has been No. 2 standard tomatoes for immediate shipment, and on account of the exceedingly small stocks in canners' hands the market has advanced to $1.05 per dozen, either Baltimore or factory, but this price seems to be exhorbitant to buyers, as they do not seem to be willing to pay over $1.00 Baltimore or factory.

New pack spinach and pineapple has now started with the Baltimore canners. Next in line will be strawberres, packing of which will commence next week and in about thirty days peas and stringless beans will follow.

Vol. 47 BALTIMORE, MAY 26, 1924 No. 40

EDITORIALS

PLEASE BE PATIENT—We are sorry to delay those who have waited so patiently for a copy of the new book—A Complete Course In Canning—but the improvements which have caused this delay make the time well spent. In other words, it was better to take a little more time and add in all the important features, than to rush the book through in order to keep to a scheduled date. That you may realize the extent of this additional work, we need only remind you that the last edition of this book consisted of 272 pages. In revising this work much was eliminated, some condensed, and in many respects the book was whipped into a more business-like shape. On this account we early estimated the new book at about 250 pages. As a fact this new edition will make a few pages short of 400! So you can see a real cause for this slight delay.

The matter is all in type now and the presses are at work upon it as hard as they can be driven. Barring unforeseen delays, the new copies will be available by June 15th, in plenty of time for use on this season's canning.

We are not unmindful of the importance of having it in time, because of the numerous new conditions which have recently occurred in the processing of canned foods. We know that hundreds of canners feel uneasy and uncertain about the old processes, as everyone may well feel, and we are most anxious to give them the relief which this new book will afford, because it covers its subjects thoroughly and authoritatively. We know full well that a canner can loose thousands of dollars, and the good name of his brands, by a mistake in process due to lack of knowledge of these new conditions, or uncertainty as to proceedure. The number of canners today that operate upon the old style of the "rule of thumb"—which is but another way of saying that "we have always done it that way," or "that the goods have always kept when we processed them that way"—is very small, indeed, for all canners have learned that processing, the proper preservation of all canned foods, is today an exact science, and cannot be left to guesswork. And that is the exact reason we have gone to so much trouble and expense to have this new edition of A Complete Course In Canning the last word in definite, reliable instruction. It is brimfull of helpful hints and suggestions to save both goods and money, and we honestly believe that no canner can read and digest its contents without immense benefit. So we ask your slight indulgence, with the promise that we will rush copies to all who want them as quickly as they come from the press, and that they will be in time. It is far enough advanced for us to say this definitely now.

IF BUSINESS INTERFERES WITH POLITICS—Cut out the business, seems to be the determination of our noble representatives at Washington. There has been an indefinable "something" affecting business for some time, and the canning industry particularly has had just cause to complain about it, for this industry ought to be in magnificent shape—and would be were it not for that mysterious "something." As one well-known broker points out, at this time last year, with a comparatively good supply of spot tomatoes on hand—compared with this year's trifling holdings—No. 3 standard tomatoes were selling quite impress their representatives at Washington with the freely at $1.75 per dozen; now, with only a handful of spot tomatoes left, they are going begging at $1.40, which we cite merely to emphasize the effect of that "something." Business men generally had tried to fact that the country is groaning under too heavy taxes—State, National and all kinds. And it actually seemed as if those representatives had given ear to these complaints. They pretended action looking towards a lowering of taxes. And then loomed in the offing the Presidential election, and a return to their seats via the November elections. And so they went out to buy votes by passing the Bonus law, adding a cool billion in taxes to the already overburdened taxpayer. How are you canners and the rest of us going to pay this added amount? For it must be paid, and will go on for generations to come, increasing in amount like an onrolling snowball. Don't forget there are probably more on the pension list of the Civil War today—sixty years after the war ended—than there

were a few years after that war closed. We could hardly stagger under the weight of taxes before, and now they have been doubled on us. And we miss our guess if this vote-buying gang do not still further add to this by passing the Farm Loan Bill with its two or three hundred million dollars more. It is becoming increasingly evident that we not only have too many laws and too many law makers, but as is ever the case in quantity, the quality is extremely low. It looks like the answer to that indefinable "something" might not be so hard to find, if the American public had gumption enough to find it, and then change it. But it hasn't.

WHAT OF THE HARVEST?—Last week we published the forecast of intended acreage of tomatoes, as compiled by the Bureau of Agricultural Economics, and it showed that whereas the tomato growers and canners had planned to set out 312,000 acres of tomatoes this season, as compared with 289,200 acres of tomatoes last year, they were able to report only 175,149 acres as arranged for up to this time. Of course, the season is young yet, and this reported intended acreage can be added to, but that it will reach the early intentions no one now believes. Kindly and ever far-sighted Dame Nature has stepped in to restrain these enthusiasts. And this week we publish the same sort of figures covering the pea plantings and intentions for 1924, and we find again the same results, only worse. The intentions of the pea growers and canners, according to this report, called for 226,750 acres for 1924, a very considerable increase over the total acreage of 1923, which was but 189,310 acres. But the statisticians reporting this were able to find but 143,247 acres of peas so far to be counted upon, and again it would seem, because the pea-planting season is getting so late, that even if planted the crop will be a very doubtful one, that Dame Nature has put a restraining hand upon these growers who would like to test the ability of the consumers to the limit. "There is many a slip twixt the cup and the lip" is an adage which might seem to have been made to fit the canners and their growers who aim high, but generally shoot low. It looks safe to predict that canners' crops for 1924 will not break the backs of the canners, as most buyers were sure would be the case in this eventful year of 1924. All of which ought to be the best kind of a warning to the canner who still wants to sell futures at or below costs.

THE MIDDLE OF THE ROAD—Some of our best political economists and largest business men have advised business to stick to the middle of the road this year—upon the crown where it is not so likely to skid into the ditch; and here at the beginning of June this looks like very good advice. Take it carefully, pack them well and don't strive for any records in quantity production. If you do this, you may come through the year smiling and contended.

FORMER HEAD OF H. W. CALDWELL & CO. DIES

FRANK C. Caldwell, a director of the Link-Belt Company since the purchase of the H. W. Caldwell & Son Co. by the Link-Belt Company in 1921, was stricken with heart failure the morning of May 15th while on his way to his bank. He died in an ambulance en route to a hospital.

Mr. Caldwell was born in Indianapolis in 1866, and came to Chicago in the early eighties to complete his education at Union College of Law. He practiced until 1892, when he became vice-president of the H. W. Caldwell & Son Co. He became president in 1908, and continued until the Caldwell Co. was purchased by the Link-Belt Company in 1921.

Since then he has been a director of the Link-Belt Company. His long experience in manufacturing, his knowledge of law, his ability and his sound judgment were held in high esteem by all who knew him.

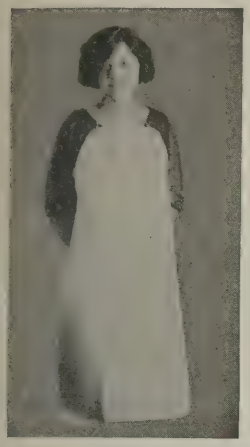
Mr. Caldwell was president of the National Metal Trades Association in 1911-1912, and served as its treasurer from 1912 until 1922. He was a sturdy champion of the right of the individual to work without declaring allegiance to a trade union. He stood for the open shop, for industrial freedom, and opposed vigorously and courageously the efforts of organized labor to encroach on the rights of the individual and to exercise its growing powers without accepting full responsibility for its acts.

He was a sterling individualist, for he was convinced that his country would continue to grow in general prosperity and happiness only through the encouragement of individual initiative and enterprise. A capable, worthy citizen was Frank Congleton Caldwell, always ready to discharge fully the dutiees that good citizenship imposed.

READ "ALL OVER THE WORLD."

Our readers know we have never tired them out repeating the good things said about The Canning Trade. We know it is the style and all that, but to our mind a journal that cannot tell its own worth to its readers is in a bad way, and "testimonials" will never make it better.

The only real test of a journal is its paid subscribers, and therefore the highest compliment is an expressed desire to keep paid up, so that no issues will be missed. And we continually receive such letters, telling us to send bill, or "keep it coming and we'll send check."



Here is one from way down in South Africa:

Western Province Preserving Co., Ltd.
"SUNLAND" PRODUCTS.
Orchard Rail, Hex River Valley,
South Africa, 23rd April, 1924.

Dear Sirs:

We shall be glad to hear whether there is any amount standing to our debit in your books, and if so kindly advise us the amount, and we shall immediately send you a money order.

Yours faithfully,
For Western Province Pres. Co., Ltd.
A. S. CALDER,
Secretary.

Do You Know

— that PROTEXU CANNERS APRONS will save you money because they are **low in price, unusually durable,** and afford **greater protection** for your employee?

Scientifically constructed of fine, strong fabric, amply coated with tough, elastic, **wear-proof rubber,** Protexu Aprons are especially designed for all canning operations. Hundreds of canners use them exclusively, finding them **most economical.**

Moreover, Protexu aprons are **soft, flexible, lightweight** and extremely **comfortable** to wear. Made in any standard or special size, with or without bib.

COLORS: Black or White
30" x 38" — $12.00 dozen
38" x 44" — $15.00 dozen

Send trial order TODAY — and learn how much apron service you can buy for your money. **Maximum protection at minimum expense guaranteed.** In ordering, please mention style and size desired. Samples of fabric, showing quality, on request.

BEAR BRAND APRONS, another popular style (grey), **large in size,** and weighing only **16 ounces,** cost **$15.50 dozen.**

William M. Gross.

Makers of all styles aprons for all industrial purposes

Soil Treatment and Crop Rotation For Sweet Corn

By Dr. A. L. Whiting, University of Wisconsin.

THE production of the best quality of canned sweet corn is first of all a field problem. Unless the best quality exists in the field it will never appear in the can.

There are a few factors which largely determine the quality in the field. The selection and breeding of desirable strains of seed from various standpoints constitutes one factor; the temperature conditions another; the moisture conditions another; yet all these are dependent upon still another or the fertility of the soil. A proper combination of all these factors constitutes the conditions for quality production in any crop.

Soil fertility is an unavoidable factor for quality production because the crop is made from elements in the soil which are combined with the sunshine. Seed of excellent pedigree avails nothing, if the soil upon which it is seeded lacks one of the essential elements for crop production.

In increasing crop yields and crop quality, man is limited in his efforts to the controllable factors of production. Little can he influence the temperature or the rainfall for sweet corn. Thus it becomes apparent that the canner and the grower should concentrate their efforts on the fertility of the soil and its related problem of crop rotation, while the problem of seed selection is one largely for experts.

The canner should know the principles of soil fertility and assist his growers in their application. It is to your credit and advantage that the soil be enriched or maintained in a state of high fertility. In this paper a practical procedure for attacking your soil problems will be outlined.

The first fact to determine regarding the soils of any region for all crops is whether they are sour or sweet. Simple, rapid and accurate methods are available for use by anyone for this purpose.

If the soil of a given field is sour or deficient in limestone it will not produce the best quality of sweet corn as a regular performance. You then face the first step in soil treatment and it is better both from a moral and financial standpoint to encourage the grower to add limestone or lime to the soil than to seek from his available land the sweet soil on which to grow the sweet corn. While the latter course is to your financial gain and while it is true the future of the industry depends upon producing sweet corn of high quality, one should not lose sight of the opportunity to aid the grower to apply limestone or lime and to apply it in your own farming to sour soils.

Limestone influences the sweet corn crop in many ways, but there are three which stand out prominently in your relation to soil problems.

1. It neutralizes the acid and renders inactive the toxic aluminum, iron and manganese of the soil. Aluminum and iron are especially toxic to sweet corn and are considered predisposing causes of root-rot. Limestone precipitates them and consequently stronger and better sweet corn results.

2. Limestone increases the production of available nitrogen for the growing crop.

3. Limestone makes possible the introduction of legumes into the rotation, which is a necessary step for the best crop production. The value of applying limestone to soils is accepted by scientists and farmers and needs no defense. It is a paying investment.

The quality of sweet corn and also the yield is dependent in a large measure upon one element of plant food which unfortunately is deficient in many soils and which is too expensive to purchase, is lost in the largest amount in the drainage water from soils, and is removed in the largest amount by the crop. This element is nitrogen, of which the air contains an inexhaustible supply. It is available for your use by proper methods of farming.

Sweet corn for quality canning is taken before natural maturity has progressed to any appreciable extent. Nitrogen plays the largest part in hastening the growth of the corn plant and in delaying its maturity. It is the nature of this element to function in this manner. Back of this function of nitrogen it is necessary to have a supply of the element during the critical feeding periods.

Thus your next serious attention after the correction of sour soils conditions should be directed toward establishing a system that will supply ample nitrogen for sweet corn, which is a relatively heavy feeler on that element.

This second step in quality production is most economically accomplished by introducing legumes into a rotation of crops. The object of this step is to obtain nitrogen and organic matter first for the soil in which it is prepared for use by the sweet corn.

By seeding inoculated legumes such as sweet clover, common clovers, alfalfa, peas, veitch, soybeans and others, nitrogen is taken from the air and is added to the soil if the manure or better the crop itself is returned to the soil at no cost in many cases, as these crops are worth growing for feed, seed and soil enrichment.

These crops are rich in nitrogen and decompose rapidly enough for the succeeding sweet corn crop.

Sweet clover is a hardy crop, consequently the chances of obtaining a successful stand are much greater than with other small seed legumes. It possesses several characteristics that give it superiority over other legumes for soil enrichment.

Some of these important characteristics are:

1. Adaptability to various soil types, and climates.

2. Hardiness to drouth and resistance to insects, weed and diseases.

3. The production of a large tonnage per acre at a time when it can be most profitably used.

4. Rapid decomposition in the green condition.

5. Its deep rooting habit permitting it to form more than the surface soil. It opens up the sub-soil, allowing air to enter and water to pass through.

6. It feeds on soil minerals more effectively than many other crops.

These characteristics when combined in one crop make it almost ideal for supplying nitrogen to sweet corn.

Briefly, the procedure is to seed 10-15 pounds of well inoculated sweet clover seed (biennial white sweet clover), per acre in small grains or in peas, which are the best nurse crop yet found, and plow it under the following spring for the sweet corn.

A most excellent crop rotation consists of seeding sweet clover in peas and following with sweet corn. The sweet clover may be seeded with oats, wheat, rye, barley or even in sweet corn at the last cultivation. In all such cases it should be allowed to grow the remainder of that season and plowed under in the following spring when in a green condition just prior to corn planting.

Do not fall plow it unless absolutely necessary, as it will grow up in the spring from the old roots and replowing will be almost unavoidable. Sweet clover should be plowed in the spring in the green condition about seven to fourteen days ahead of corn planting. As canners you should have a brief understanding of why this crop is so important in the matter of quality of sweet corn.

Sweet corn requires a large amount of available nitrogen in a relatively short time, although not as much as field corn at maturity. The soil must supply available nitrogen when the crop needs it, if a proper rate of crop growth is to be obtained and a delayed maturity.

The nitrogen in the plowed under sweet clover came in part from the free nitrogen of the air. It is in the form of various organic nitrogen compounds including protein. As such it is not food for corn, but must be decomposed by proper soil bacteria.

The organic nitrogen is first broken down to ammonia by many soil bacteria and molds. It is not yet in a form to be the best food for corn and the ammonia must be oxidized by special soil bacteria to nitrite and still further to nitrate which is the desired form of nitrogen for most farm crops with the possible exception of legumes.

In this form it accumulates in the soil and is ready when the sweet corn needs it. Organic nitrogen serves as a reservoir from which nitrate may be produced over many months. This is a great advantage over applying soluble nitrogen which may be readily lost soon after application by removal to deeper layers. It may also be lost from sweet clover, but more is always being produced which insures a ready supply during the growing season.

Figures obtained in studies conducted by the writer show that it is reasonable to expect from 150 to 250 pounds of nitrogen in one good crop of sweet clover at the proper stage for plowing under for corn. Comparing this with the nitrogen in one ton of sweet corn plants or 34 pounds, it is seen that one crop of sweet clover would carry enough nitrogen to produce five tons of sweet corn plants.

The following comparative composition figures serve to emphasize the value of sweet clover for feeding sweet corn:

Sweet Clover Composition Compared with Fertility Removed in Sweet Corn Ears.

Plant Food Element	Sweet Clover Crop of 5,700 Lbs. Ready to Plow Under	Sweet Corn Crop 5 Tons of Ears Only Removed from Soil
Nitrogen	219.4	37.7
Phosphorus	13.0	6.0
Sulphur	26.5	1.39
Potassium	53.8	20.7
Calcium	54.8	1.42
Magnesium	24.5	3.69

The figures show that sweet clover is ample for feeding sweet corn if most of it becomes available during the growth of the sweet corn, which experiments have shown to be the case.

Further it is evident that the nitrogen removed from the land in five tons of sweet corn ears taken for canning is all derived originally from the air by the sweet clover. This would only require that 17 per cent be taken from the air by the sweet clover, which, however, is a very low figure compared with what is commonly assumed to be taken from the air by legumes on ordinary soils.

Studies of field soils showed that the nitrate content doubled in the four to five weeks after plowing under the sweet clover. This accumulation of nitrate coincided with the period in which corn takes up its plant food.

The corn plant takes up most of its food in about two to three weeks. This period usually corresponds to the increase in volume and height that is so noticeable from the time the corn is laid by and during the next three weeks. In one case 40 pounds was removed from the surface soil in seven days by field corn. On Illinois soils where sweet clover has been three times in twelve years the nitrate present even after a big corn crop has been provided for has frequently ranged from 30 to 180 pounds per acre in the surface only. Even on what was considered very poor soil before improvement began sweet clover has given an excess of nitrate for the corn crop.

The physical improvement in the soil is sometimes as great as the chemical improvement when sweet clover is plowed under; especially is this true on sandy and heavy clay soil.

Sweet corn requires more of the element potassium than of the other mineral elements. The reason for this may be found in function assigned to potassium in carbohydrate or starch and sugar formation.

Sweet clover is a potassium-gathering crop under normal conditions. It obtains this element from some three to four feet of soil. Applications of potassium helps the sweet clover on light soils, sandy and peat soils, but on many soils it does not pay its cost.

By referring to the composition of sweet clover it is seen that contains ample potassium for sweet corn. It is known that practically all this potassium is water soluble and very quickly available to the succeeding crop.

The whole problem of proper crop feeding is on the road to solution when a sufficient amount of the mineral elements and nitrogen is contained in easily decomposable green manures. It embodies the utilization of the ability of a cheap efficient converter of plant food. Thus far no crop has been found to be the equal of sweet clover for soil improvement.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

Manufacturer of newly developed "SOCOCAN" especially adapted for Coffee, Peanut Butter, Lard Substitutes, etc.
Write for samples and detailed information

The Kiefer Catsup Filler

The new Kiefer Catsup Filler, having conclusively proven its worth last season, presents advantages which no catsup bottler can afford to overlook.

It fills without slop or waste and will not deposit catsup in broken bottles.

There is no perceptible loss in temperature when filling.

Metal contact is reduced to a minimum.

Nothing to take apart when cleaning at the end of the day's run.

We are willing to prove these things to you in your plant. Many manufacturers have already placed their order for this season.

Get your order in before it is too late.

The Karl Kiefer Machine Co.
Cincinnati, Ohio.

Phosphorus should be applied after the system is established in order to correct any serious deficiencies, but its use must be guarded because of its part in rapid maturity. If the nitrogen is kept at a high level this danger will be overcome.

Encourage crop rotation for sweet corn growing. Diseases and insects can be avoided to some extent by introducing into the rotation legume crops especially sweet clover and soybeans. If a season can be devoted to a soil enriching crop either sweet clover or soybeans may be used.

For the canner who grows his corn on leased or owned land part of the land must be given over either to a grain crop in which to seed clover or to soybeans in order to keep up the fertility and to have other crops than corn continuously on the land. Where the corn is contracted it is easier to take advantage of the farmer's rotation but more difficult to see that a real soil enrichment program is carried out. No matter what conditions you may be operating under, you cannot afford to neglect the fundamental principles outlined here.

To summarize:

1. Test the soil for acidity.
2. Apply limestone or lime or encourage their use by growers for the acid soils.
3. Use inoculated legumes as green manures, especially sweet clover.
4. Apply phosphorus and potassium after the system is under way and then only where they are needed.
5. Encourage crop rotation.

By applying the above information to your field production problems a great deal will be accomplished for quality and efficient sweet corn production for canning and the soil will be enriched in deficient elements.

Tomato Thoughts

By E. O. Grosvenor, Chairman N. C. A. Tomato Section

WHILE our brothers in the food packing world have preceded us in the march toward excellence of output, there is still time for the repentent tomato sinner to get in step with the movement. The leadership of tomatoes in the vegetable world of cans is today threatened by the tasty corn and the succulent pea.

Embraced in the various causes for this decline will be found the fact that fresh tomatoes are more and more plentiful on our green goods market during all seasons of the year. Short, indeed, are the days of fresh corn on the ear and green peas in the pod. But this significant statement does not tell the whole story.

Poorly packed goods, in disreputable cases, cheap labels, and a declining quality also contribute. Lack of consistent co-operation for the good of the industry is a factor. Several local canners' organizations, dominated by tomato interests, refuse to meet on a common ground, but seem to pursue a selfish course. We are reluctant to take earnest notice of the spirit shown by the corn, kraut and hominy canner, the preserver, pickle and pea packer.

Where shall we start in noting the essentials for our success?

Seed.

Let us follow nature and first consider seed. Who is there so short sighted as to challenge the statement that it is most important to provide the best possible seed? Seed of sound ancestry; seed that has been carefully gathered; seed that has been painstakingly treated; seed that has been intelligently stored against the day of its use; seed that shows a uniform and high percentage of germination. It is only within very recent times that the tomato packing industry has appreciated the necessity for better seed and taken vigorous means to provide a superior article. In this most important factor, seed, both the corn and pea packers have acted for their own advantage and preservation quite in advance of the tomato packer.

Time was when tomato seed was simply a product resembling the mule in being without pride of ancestry, and equally without pride as to what its posterity might be. The usual tomato seed used was bought in the open market, ordinarily from seed houses and without pedigree or guaranty. Today, much greater stress is laid upon the essentials expected in a tomato seed and a packer's requirements are safeguarded as much as possible discrimination in purchases. Recognizing the wisdom of seed selection, a few tomato packers have for years raised their own seed, giving due regard to such strain development as would produce a tomato suited to their climatic and manufacturing conditions. The average packer has trailed far in the rear, mostly content to make his seed purchases when spring promised a need for seed, and fortifying his order with no stronger condition than that he wanted "good seed." He generally got it, either "good" or "good for nothing," according to the business morals of the seedsman.

There are high class seed houses, and ever will be, those whose mere acceptance of an order is a guaranty of the quality of the seed furnished. Unfortunately, there are scalawag seedsmen as well as scalawag packers, and their own guarantee is, in effect "mine run" tomatoes from their "mine run" seed. The practice of such as these is to arrange with some tomato pulping factory to obtain the entire cyclone refuse of the plant, paying a stipulated sum, based upon the tonnage of tomatoes received. The seed thus obtained, hide, whiskers and all, is sold under various conditions, but always remains true to its vile parentage. Need we say that a tomato crop, predicated upon such seed, has small chance of proving satisfactory? Our maxim should be "Buy seed where honor enters in."

Let us not forget that the per acre yield of tomatoes will have a direct relation to the quality of the seed used, and that's that. In more recent years, our State Experiment Stations have undertaken to contribute a share of their endeavors toward providing parent tomato seed of strong characteristics. In Indiana, the State Canners Association has undertaken the raising of a considerable quantity of seed from this parent stock. This undertaking is now in its fifth year and is going strong. The seed is sold wherever demanded, and the supply is always exhausted far in advance of

seed time. Careful comparative tests covering these years show a substantial increase in yields. In these years of discouragement for the farmer, we cannot but heartily endorse anything which will increase his yields and profits. For ourselves, we remember that the larger the yield per acre the better the quality of the fruit will be.

Plants.

Next to the best possible seed, or even more important, if indeed such a thing can be, comes the kind of tomato plants available. Through all the changes of the years has come the everlasting argument of what is the best method of tomato plant raising. In places the packer raises and furnishes the required plants to the growers, either free or for cost; in others the farmer raises his own plants; in still others plants are raised in southern climes and brought north at planting time; the latest is the movement in limited eastern countries to provide plants by the community raising system. The pioneer work of Mr. Radebaugh in this is worthy of study and emulation. While a successful working of this system seems to demand very consistent co-operation, the marked appreciation reported from the territory where tried must command recognition. We may well expect better plants and a better plant raising enthusiasm.

Within late times there have been many plants raised in southern states for use in the northerly tomato zones. Generally speaking, there has geen much satisfaction expressed with such plants. However, some growers have not given the subject sufficient supervision and disease has been found in the young plants. Other growers, with attention to soil, seed and growing, have largely escaped disease. Formerly the plant industry bureaus of these southern states have not pretended to render assistance, ignoring the potential advantages to their several commonwealths. Let us rejoice that today there appears a decided interest on the part of at least one southern experiment station. The credit belongs to a prominent gentleman of the middle west, for some years a large grower of southern plants for the northern market. He has provided the incentive which has aroused the necessary energy. We may feel confident that shortly southern grown plants will come to our factories tested and certified free from disease by the agricultural officials. That is a result well worth while. If southern grown plants are properly grown, tested and certified, packers will have confidence, and all of us realize that it is important to have sturdy plants as early as possible.

Raw Stocks.

The spirit of restlessness begotten of the serious depression in farm products and values demands some notice from all canners of vegetables.

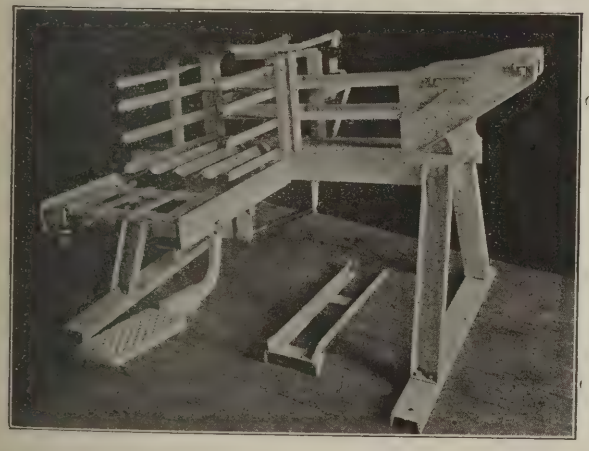
The desire for organization, with co-operative marketing its objective, is clearly and widely in evidence among our farmer friends. In many localities this has already resulted in packers contracting their entire acreage through the growers' organization. The plan has worked fairly in some sections, though poorly in others. The plan presented provides for a county or district organization, under a central, possibly state, organization. All contracts are made by the organization with the packer, payments go direct to the central office, and from there are later distributed to the growers. The organization proposes to inspect crop deliveries and exercise careful supervision of all details. If some of the present inconsistencies and idiosyncracies can be eliminated, the plan may meet with a measure of success. Several bad features, aimed it seems to protect the organization, operate against both the grower and the packer. Among them may be mentioned the contract running for five years. Should the organization cease to function or die—we can all remember what sad failures farmers' organizations have sometimes been—there is no way of liberating the farmer from the exactions of the contract. We shall probably hear more of such attempts at organization before we hear less.

The most certain path to better tomato production lies probably in obtaining larger yields per acre. To this end we can look more hopefully than formerly to our agricultural experts, found in our National Department of Agriculture and in our State Experiment Stations. To the packers we say, "Support your Experiment Station, for there much of our future lies." The Experiment Stations will welcome you and your assistance, and will devote a fair share of their resources to your tomato problems. But, and it is a big but, too, the burden and duty lies, and always will lie, upon the shoulders of the individual packer. He soon will see his own selfish interest, and cannot escape, try as he may, the strong position now occupied by the farmer population. Tomatoes must be packed economically or the consumer will initiate another strike. Possibly growers are entitled to better returns, but this can more logically be obtained by disease prevention, more husbandlike cultivation, better plants, better seed and beter farming methods. It has been demonstrated that a much heavier yield is obtainable than is now the case. Given double the prevailing yield—it is entirely possible—our growers will be happy with prices they now repudiate. The road to better things is well marked, with plenty of parking space at the other end.

Co-operation.

Co-operation is of so many kinds it doubly merits attention. First, remember the National Canners Association. It is the big instrument in our well being and uplifting. To be a non-member speaks volumes of your reluctance to recognize the most powerful influence for good in the entire industry. Well officered, energetically as well as capably managed, it stands today for a fixed and comprehensive program which spells better things. Do you have problems? The N. C. A. laboratory can guide and help you. It contains the foremost equipment, coupled with the best canning brains in the world today. Its administration is directed to seeing that canned foods get a fair show. That means your "canned foods", Mr. Non-member. Will your pillow bring you easy rest while you remain on the outside of this thoroughly representative and aggressive organization?

Then there's your state canners organization. It too merits your membership. The Western Canners Association appeals strongly for your support. Those who give their time and effort to it are the leaders of that great canning section of the middle west.



Another kind of co-operation is found in the present day tendency for individual lines to merge in a movement to build up production and distribution through the employment of a competent manager. This manager finds much to do in advising members upon all questions. His special mission is to do away with con-

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

ditions within the industry which hamper progress, and to standardize the entire packing operation. This movement is only in its infancy, but promises a healthy existence.

One branch of co-operation is directed toward promoting the sale of individual lines. First put your product right, then tell the public about it, and then tell them again. The thorough popularizing of a product by the efforts of a well cemented industry calls for the finest brand of co-operation in captivity. The selfish packer may remain out of the field and permit his more enlightened brother to carry the entire load.

We note the far cry for co-operation to protect us against unfair competition in its many forms. Then there is, at least in the tomato industry, the co-operation of those in one zone, pointed against those of another zone. The packers of Zone A, for instance, organize and launch a campaign to brand their own tomatoes with the name of the state where produced, in the meantime extensively advertising excellence over all other tomatoes. Presto; comes a short crop in Zone A. Promptly the packer hastens to the territory of the despised and inferior tomato and purchases his requirements, and distributes the same under his own advertised labels. A violation of the food law, did you say? Yes, and worse. It is merited and ultimate suicide. Co-operation aimed at increased popular consumption is a splendid idea. The love apple deserves it, for it has been neglected these many years. But, such an organization must be wide in its scope and bound together for a period of years or it must fail. Excellence of the product must be its foundation stone, and excellence begins with good seed and ends with an attractive retail package, in a respectable box. At every turn we must think in terms of the best obtainable if we hope to endure in the public mind. Given an excellent product, the consumer will pay an equitable, dividend-paying price.

Tomato Pulp.

The manufacture of tomato pulp has grown to large proportions within the last few years, and promises to hold its own. Pulp and its related products, catsup, paste and puree, already consume a healthy proportion of the tomato crop. Due to their nature, these products are subject to certain weaknesses, a certain breaking down resulting from decomposition of various kinds. The pure food authorities have undertaken to control the manufacture and sale of these articles, in order to assure their being foods of the highest excellence. The Bureau of Chemistry at Washington, charged with the enforcement of the National Food Law, has promulgated a microscopic standard, under which pulps and related products are required not to contain over certain numbers of yeasts, spores, bacteria and molds. The microscopic examination proceeds under a method adapted to tomato products by Dr. B. J. Howard, chief microscopist of the Bureau. This method has been in vogue about fifteen years, and under it food officials, with varying degres of zeal, have punished the transgressor. Considerable opposition was at first manifested, but this has largely worn away, until it is well recognized that the Howard method is a reliable and competent one for the control of tomato products. There have been investigations of the method and its application, but these have, in the main, only served to confirm the method. Our reference to the Howard method in no sense contemplates a scientific review or criticism. The method has some practical applications which we may all absorb. However, as a scientific method it is not held out to be an absolute one, but rather a comparative one.

First and foremost, a microscopic examination of pulp or related products under the Howard method will truthfully and accurately tell us the condition of the tomatoes allowed to go into the pulper after sorting. Plenty of proof of this is at hand, indicating that when counts were running high an inspection of the raw stock showed unsound fruit getting by. You may be operating a number of factories and employing only one microscopist, yet his examination of samples from a day's run of pulp at the different points will tell you absolutely what each factory has been doing. Your daily reports from the laboratory tell you the story of each plant.

Again, purchasers of pulp and related products sorely need some means of determining the soundness of the article they are buying, both sample and deliveries. There is no chemical method known at present. The microscope is the only means available. Right here let us emphasize the necessity of having a capable microscopist. Much misunderstanding has arisen through incompetent men. Since working with a microscope is a trying occupation, judgment must be exercised in the number of samples examined.

Hoist the danger signal for the packer who is satisfied to equip and operate his plant well enough to get by with his mold count in good years, but to fail utterly when there comes along a bad year. He will hump himself to Washington and demand that because of bad weather a greater tolerance of mold count should be permitted his product. To do this would be unfair to the packer who, in another zone, has not had this bad year, or the packer who, by greater diligence, has made a satisfactory article. When weather conditions become too bad, the logical course is to recognize it, cease operating and call it one of the hazards of this frequently hazardous business.

The Howard method, because of being the only known reliable rule for testing pulp and related products promises to endure. Abundant recognition of this exists. A very large proportion of pulp makers are today guiding their operations with the microscope.

The executive committee of the Indiana Canners Association recently voted unanimous endorsement of the Howard method. It is doing a great work in raising the standard of pulp, puree, catsup and paste.

Let us repeat a few chosen essentials for low count pulp making:

First—Never crowd a sorting belt with more tomatoes than its dimensions are designed to carry.

Second—Allow 2½ to 3 feet for each sorter, and use five sorters for handling three tons of tomatoes.

Third—Give the tomatoes a rinsing spray after passing the sorters, to avoid contamination of the good fruit in sorting out the poor.

Fourth—Provide facilities as nearly as possible for handling all receipts promptly. This will improve the farmer's temper as well as the mold count.

Fifth—Use selected help for sorting—not those who are useless elsewhere on the job. Do not mistake activity for usefulness. Put a supervisor over them.

Sixth—Arrange proper light for the sorting operation. If artificial light is employed, apply that light to the best advantage.

Eternal vigilance is the price of low count pulp.

Just as We Predicted - - It Made a Big Hit.

A greater number of Canners placed orders for INVINCIBLE CORN HUSKERS at the Buffalo Convention than any Convention at which we ever exhibited, — and more are ordering daily.

THE 1924 MODEL INVINCIBLE HUSKER IS LIKED FOR ITS SIMPLICITY.

The demand is going to be big, but we are prepared for it.

Corn worms cannot possibly affect the proper functioning of INVINCIBLE Corrugated STEEL ROLLS, whereas, Rubber Rolls become greasy and they cannot be sterilized with hot steam.

Steel Rolls are sanitary. That alone is a sufficient reason for you to use INVINCIBLE HUSKERS, the only all steel roll Husker.

SHIPPERS AND RAILWAYS EXPECT BUSINESS TO HOLD TO THE MIDDLE COURSE.

BUSINESS, in the Eastern Atlantic States at least, will hold definitely to the middle course for the next two or three months. This is the general conclusion reached by twenty-five commodity committees of the Atlantic States Shippers Advisory Board, who made detailed reports of their specific industries at the last meeting of the Board, held early in May at the Commodore Hotel, New York City.

As a voluntary organization of railway shippers, formed for the purpose of adjusting transportation disputes informally, by direct conferences with railway officials, the Atlantic States Shippers Advisory Board is in a unique position to make a close check-up of industry. Five hundred of the largest shippers and railway officials of the country attended the last meeting of the Board, whose jurisdiction covers New York, Pennsylvania, New Jersey, Maryland, Delaware and part of Virginia.

One of the Board's major purposes is to predict freight car requirements for a period of sixty or ninety days, so that the Car Service Division of the American Railway Association may allocate cars more intelligently, and thus avoid all danger of congestion and delays. This is accomplished through commodity committees composed of definable representatives of all the industries. They make an actual survey, by direct questionnaires to individual concerns of conditions in their industry, as well as advance business on hand.

The composite picture which these facts provide indicates that business men are exercising caution to avoid over-expansion, both of production and distribution. Manufacturers, it was brought out, are making efforts to reduce output to correspond more nearly with consumption. This is considered a healthy tendency, for obviously business men are reducing to a minimum any chances of a sudden deflation, and at the same time they are keeping prepared for greater activity.

The following industries submitted reports covering present conditions, and forecasts for the next two to three months: Iron and steel, textiles, automobiles, automotive parts, coal, coke and ore, coffee, confectionery, cordage, electrical machinery, fertilizer, fresh fruits and vegetables, glass container, grain, cement, gypsum, lime and plaster, lumber, milk and milk products, petroleum, rubber, clay products, salt, slate and sugar. Some of the more specific facts brought out follow:

Iron and steel shipments for the next sixty to ninty days are estimated at practically the same as the corresponding period last year. Very little demurrage is being assessed at present. The general condition of the industry is described as "fairly good."

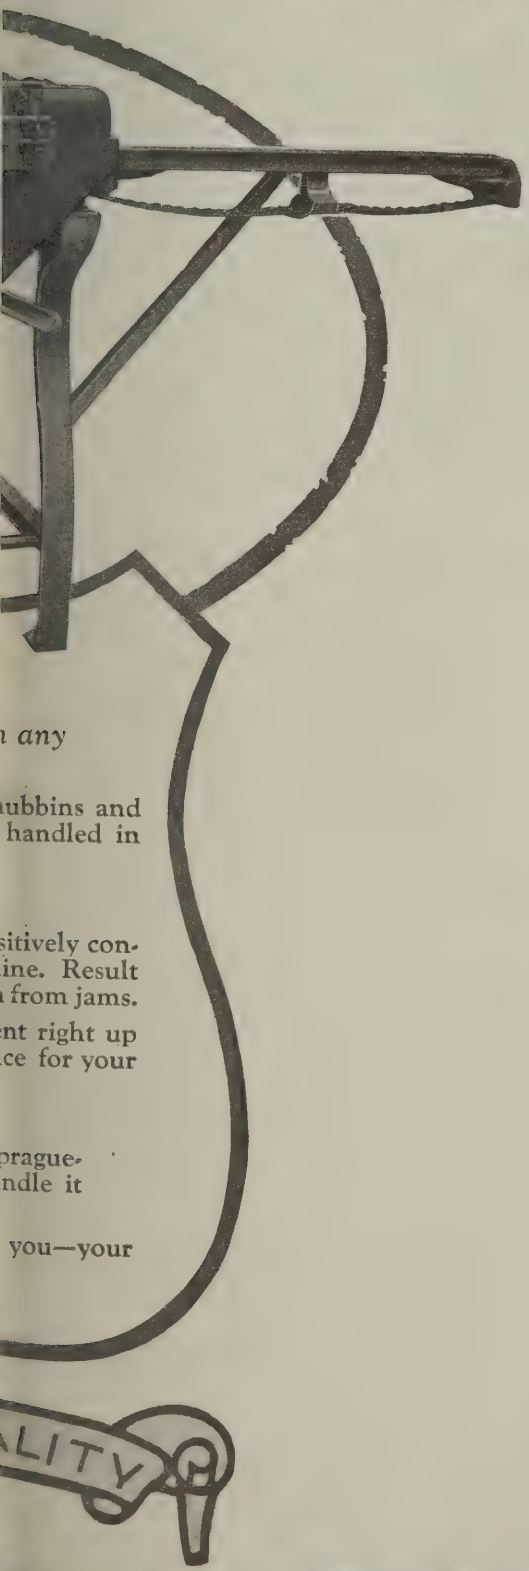
The textile committe estimated that woolen shipments for May and June would be 30 per cent less than the same month of 1923, but a 30 to 35 per cent increase over the two preceding months this year. It is believed that cotton piece goods will decrease 10 per cent as against a year ago, and that natural silk will also show a slight decrease. No change is looked for in shipments of gloss and rayon silk.

Production plans of the automobile factories located in the Atlantic States Shippers Advisory Board territory indicate that 4,500 cars will be loaded in May and 4,000 cars in June this year. This compares with 5,369 cars loaded in March and 4,970 cars loaded in April this year. No appreciable change is expected in the business which manufacturers of automobile accessories and parts will do during May and June.

The coffee industry expects that car requirements for the next sixty days will "approximate what they were in May and June, 1923, but hardly expect they will be exceeded." For the first four months of 1924 coffee shipments were about 8 per cent under the corresponding period of a year ago.

For the next ninety days the cordage committee computes car demands as 977 cars outbound and 937 cars inbound. Officials of the electrical machinery industry look for a slight reduction in cars required to service their business the next sixty days as compared with the preceding period. There is evidence also of a "gradual reduction of inventories," it was reported. Car requirements for fertilizers will be very few for the next two months, as the fertilizer shipping season is almost over, and purchases will be light until the fall season in September. About 60 per cent. of this year's production has already been transported.

Two thousand five hundred cars will be needed to transport the products of the glass container manufacturers during the next two months, according to the estimate filed with the Board. The cement industry expects shipments to require 39,165 cars in the same period, of which Eastern Pennsylvania and Maryland will use 32,510 cars and New York 6,655 cars. As of April 1, 1924, approximately 13% of the year's production has been transported. Cement officials report that business is "equaling expectations."



The petroleum industry expects to do 10 per cent. more business the following two months than it did during the same period of 1923, according to an analysis of their car demands. May and June shipments of lime and plaster this year are expected to be 19,140 cars, divided as follows: New York, 11,730 cars; New Jersey, 320 cars; Pennsylvania, 5,165 cars; Maryland, 1,675 cars; Vermont, 250 cars.

Reporting on the visible supply of grain as of May 3, 1924, the Grain Committee developed the following facts: Stocks of wheat on hand at the port of New York were 315,000 bushels; at Buffalo, 4,188,000; at Chicago, 13,198,000 bushels; at Duluth, 4,483,000 bushels; at Minneapolis, 12,684,000 bushels; at Kansas City, 8,421,000 bushels; at Omaha, 2,176,000 bushels, and on the lakes, 2,010,000 bushels. Canadian wheat on hand at New York was 651,000 bushels; at Philadelphia, 506,000 bushels; at Buffalo, 5,360,000 bushels; at Duluth, 63,000 bushels; and at various places on the lakes, 2,394,000 bushels. The committee explained that it was impossible to predict car requirements for the future.

The lumber industry expects "little decrease in the present movement of forest products." At present there is a slight falling off from the peak movement of sixty days ago. Stocks are described as normal and "in no cases excessive." Lumber dealers now are unable to anticipate what the conditions in the fall are likely to be.

Milk consumption in New York will be from 6 to 7 per cent. more in May and June this year than last year, but a corresponding increase in equipment will not be required because of heavier loadings. The Philadelphia market is expected to show a 10 per cent. increase, but the increased use of motor tank trucks will obviate the necessity of using a greater number of cars than the 6,628 used last year, according to the report. It is estimated that shipments of canned milk in cases, dried milk, malted milk and casein will take 675 box cars, as compared with 489 cars used last

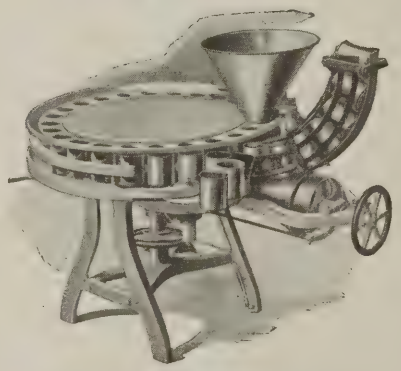
year, and 250 refrigerator cars, the same number needed last year. Shipments of ice cream to the New York market will require 100 box cars; for the Philadelphia market the estimate is 230 cars, as compared with 219 used a year ago. The general condition of the milk and milk products industry is described as "unsettled with large stocks on hand."

The approximate empty box car requirements for salt shippers in New York for the next sixty days were given as 8,795 box cars, of which 6,220 cars will be needed for rock salt shipments, and 2,575 cars for evaporated salt. It was brought out that the salt industry was below normal at present, but with approaching warm weather a marked increase in the consumption of rock salt, used by manufacturers, is expected.

All of the shippers praised the quality of the car service which is now being given. Delays in transit are few and the amount of demurrage collected is shown to be negligible. By and large both the buyers and sellers of transportation draw a picture which seems to warrant a reasonable amount of optimism about the future course of trade rather than an undercurrent of indecision.

THE CANNING SITUATION IN AUSTRALIA.



FRUITS—With the ripening of the summer fruit the annual wail of the fruit grower in being heard. His usual complaint of inadequate freight, dear sugar, which precludes the making of jam, and high rates of export freight, are this year added to by labor unrest among the canners, says Trade Commissioner Pauly, stationed at Melbourne, Australia (Report No. 16345). Canning was commenced at the beginning of the year under the Federal Ministry's bounty proposals, but now that the fruit is absolutely ripe for canning and cannot be left untreated, higher wages are being demanded by workers and a strike is threatened. As the loss to the canner by ceasing work at this time would be greater than that on any increase of wages, it may be taken for granted that the increase will be given, but at this writing no decision has been reached.

A conference of citrus fruit interests was held in Melbourne on January 29, all the states of the commonwealth being represented. Suggestions as to effective marking, and the regulation of interstate markets were discussed. A recent appeal to the Customs Department to prohibit the importation of Italian lemons was refused. Strict precautions are being taken by the federal quarantine authorities to prevent the introduction of citrus diseases through the importation of oranges and lemons from abroad. All inward shipments of lemons and oranges are removed from the cases and the fruit disinfected with cyanide gas. New rates for this year's canned fruit are being sent to the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce, and will be published.

HANSEN FRUIT AND VEGETABLE FILLER

Fills Practically Automatically But Produces Hand Pack Quality

Beets, String Beans, Tomatoes, Cherries, Berries, Kraut, Etc.

Adjustable for No. 1, 1½, 2, 2½, 3 Cans. Machine also made for No. 10 cans.

Rockfield, Wis., Nov. 26, 1923.

We are glad to advise that we are very well pleased with the Beet Filler which we purchased from you and used throughout the season. It is a great labor saving device. We used it in connection with No. 2 and No. 3 cans and it gives a good fill. We can only say the best for it.

ROCKFIELD CANNING COMPANY
BY A. J. Klumb.

Sturgeon Bay, Wis., Dec. 1, 1923.

Allow the writer to congratulate you on your Hansen Fruit and Vegetable Filler. As you know, we have been experimenting for the past five years with mechanical fillers for filling No. 2 red sour pitted cherries. Up to this year when we installed two of your fillers, we had never found anything that would operate satisfactorily on cherries but since the success we have had this year with your new filler, we feel that you have a machine which will work very satisfactorily indeed.

The machine operates very smoothly without the jamming of cans and the accompanying loss of fruit and turns out a very uniform fill. We believe your estimate of capacity which you stated was 70 cans per minute to be very conservative, for we know this machine will operate very satisfactory on 95-100 cans per minute on cherries. We expect to put in more of these machines as the necessity arises and you may rest assured that we are perfectly satisfied with their operation.

FRUIT GROWERS CANNING COMPANY
BY Edw. S. Reynolds.

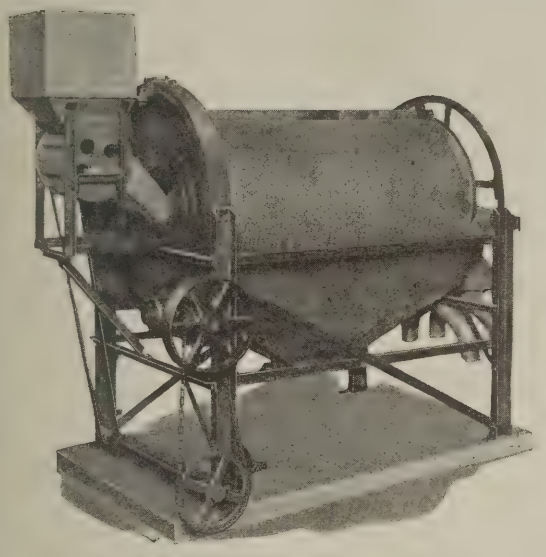
Colby, Wis., Nov. 27, 1923.

We wish to advise you that we are more than pleased with the hand bean filler, or rather as you call it, the Hansen Fruit and Vegetable Filler.

We were rather doubtful as to its capabilities until we tried it out. Wish to advise you that your filling hopper on same does not need attention and with one girl supervising the fill of cans was all the help we needed in the canning of cut beans.

We have been complimented on the uniform fill of our beans and all we can say is we lay it all to your machine.

If you have any skeptics as to the capabilities of your filler, wish you would refer same to me or my superintendent at this plant and am sure we could soon change their opinion.



CENTRAL CANNING COMPANY
BY W. H. Christiansen, Mgr.

HANSEN CANNING MACHINERY CORPORATION, CEDARBURG, WIS.

Manufacturers of Hansen

Pea and Bean Filler, Corn Cooker Filler, Conveyor Boot, Sanitary Can Washer, Beet Topper.

The Nested Sample Grader—

Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.

Manufactured and Sold by

Sinclair-Scott Company

Baltimore, Maryland.

Makers of Nested Pea Graderr, Colossus Pea Graders, and Other Canning Machinery.

THE FLUSH SEASON

While you are checking up on your plant for the flush season it is well to remember the important part which the right kind of sanitary cleanliness plays in insuring every possible profit from every dollar you have invested.

Stale odors, fermentation, improperly washed equipment—the cause of flats and swells—are readily provided against by the use of

Wyandotte Sanitary Cleaner and Cleanser

Indian in circle

in every package

This pure, inorganic. natural, active cleaner is the deadly enemy of all objectionable matter, yet it is so mild that it does not attack the surface of canning equipment neither does it harm the hands of the user. It is a wonderful rinser; it removes quickly and easily all foreign matter, so that the rich, delicious quality of your pack is adequately protected against deterioration.

Ask your Supply Man.
It cleans clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

SOME FACTS ABOUT THE STRAWBERRY OUTLOOK.

Acreage Reduced.

STRAWBERRIES may be less plentiful this year. Winter's dalliance in the lap of spring is the major factor menacing production just now. Shipments generally have been somewhat delayed.

A survey completed lately by the Crop Estimates Division of the United States Department of Agriculture in 19 states, rated as early, second early and intermediate, with relation to the maturity of their respective crops, gives reason to believe that the commercial area is about 113,250 acres, as compared with 120,710 last season—a reduction of (say) 6 per cent.

In the "intermediate" states, which include Delaware and Maryland, the total area planted to berries for harvest this season is 44,580 acres, against 46,770 in 1923, a decrease of slightly more than 2,000 acres.

Delaware is estimated to have 5,800 acres, against 6,100 last season; Maryland 10,800, against 10,420, while Virginia reports an increase of about 60 per cent—that is, 10,500 acres this year, against 6,500 in 1923.

Tennessee has the biggest acreage, 15,820. Louisiana is next with 14,280; Arkansas third, with 13,570; Maryland takes fourth rank with 10,800, and Virginia fifth, with 10,500 acres.

Shipments Behind Last Year—To April 26 only 1,421 cars moved from all producing areas, compared with 2,393 at the corresponding date a year ago. Louisiana is the only important state shipping heavily at the present time. Louisiana moved 730 cars to April 26, against 959 at the corresponding date a year ago. In the Hammond-Independence district of that state the crop was damaged to the extent of 5-10 per cent by March frosts occurring at the time of the first bloom and setting of the fruit. Louisiana acreage is about the same as in 1923.

Prices Cut to Growers—Under the rapid increase in carload movement towards the close of April and heavier arrivals, wholesale prices have slumped everywhere. Louisiana shipped during week ending April 26 as many as 452 cars, compared with 206 the week before and 43 two weeks before. And California's output is gaining. Alabama shipped 59 cars, against 2 week ending April 29. At Hammond, La., cash track prices were slashed to $3.20-$3.70 per 24-pint crate. This stock declined sharply in city markets to a range of $4-$4.50. Cincinnati quoted first sales of Alabama Klondikes at $6-$6.50 per 24-quart crate. A wide range prevailed for Florida berries, dealers in New York selling quarts at 20c-35c and Baltimore getting 50c-65c for the best quality.

JOHN S. DENNEE,
Agricultural Statistician, Division of Crop Estimates, U. S. Department of Agriculture.
Issued May 2, 1924, at Baltimore, Md.

NOTICE TO FRUIT PACKERS.

by Bureau of Chemistry Department of Agriculture.

THE Bureau of Chemistry has learned that there is an impression in certain quarters that the Government will tolerate moldy and decayed berries in fruit products up to 15 per cent. This is so at variance with the policy of the bureau that it feels called upon to state its position on the question.

Under the Federal Food and Drugs Act a product is deemed adulterated "if it consist in whole or in part of a filthy, decomposed or putrid animal or vegetable substance * * *." Failure to exclude moldy, decayed or insect-infested materials from food products, so far as reasonably practicable, will result in an adulterated article.

From factory and laboratory studies, the Bureau concludes that it is entirely possible for any careful packer to reduce the amount of objectionable berries to a negligible amount.

Packers are cautioned to use the utmost care to sort out and eliminate from their products all decayed, moldy or otherwise unfit fruit. Receipts of raw stock should be so regulated as to avoid gluts, which will cause delay in packing and consequent decay.

Ample provision should be made for handling the fruit expeditiously, and there should be sufficient help and equipment for the most careful sorting. Abundance of good daylight or good electric lighting should be available for every worker. Many packers fail to realize the importance of proper lighting for their employes. Respectfully,

C. A. BROWNE,
Acting Chief.

WEEKLY REVIEW

Crop Outlook Not at All Encouraging—Cold Weather and Rain Hampering Everything—Government Crop Reports Show Peas and Tomatoes Behind—Corn Planting Backward—In Spite of Very Light Demand, All Canned Foods Are Strong, Some Advanging, Others Will Do So.

OUTLOOK NOT VERY FLATTERING—From a crop point of view, owing to the extremely backward spring, the outlook for 1924 is not very encouraging. The packs must depend upon the crops, and the crops can make no progress; in fact, in most cases are not in the ground yet, owing to the cold and unseasonable weather which has been experienced in almost if not every section. Light frosts in the upper Ohio Valley and along the lakes this late in May, with temperatures of 34 to 40 quite general over the heavy canners' crops sections, it does not require much explanation to show that progress on these crops is at a standstill. The dwellers in the big cities will say that such temperatures do not mean frosts, and that frost, therefore, have not injured the crops. Truth is, there has been a really wonderful absence of frost damage this spring. But there has been a too great amount in continuous supply of rain almost everywhere, and so the growers have not been able to prepare the soil for planting. And it is so cold that even where the rains have stopped the soil is unusually slow in drying out. So seeding of all kinds is far behind schedule, and what they were able to get planted has not had enough warmth to mature the seed. Here we are approaching June, and much of the pea planting remains to be done, and with the ever-present aphis, or pea louse, which formerly always come in destructive numbers when the crop was late and caught by the hot, dry spells of late June and early July, becomes a very evident danger to any crop that may result from plantings made after this date. But not only peas. Corn, which should be largely in the ground at this time, is waiting for the ground to be prepared, and must wait some little while yet before it can hope to take its turn. And then the distribution of the plantings will bring the last of it so late as to make that part of the crop a considerable hazzard. Maine is badly discouraged, for there frosts come pretty well on schedule, and that means that frosts will catch their crops from this late start.

And it is not mere histeria which prompts the prophecy that very hot and dry weather is likely to follow this over-abundance of moisture and coolness. Nature has a way of evening up things, or of giving a certain amount of rain and heat, and if either comes in lumps, crops suffer later for the want of the proper distribution. It will surprise no one to see a long period of hot, dry weather all during June and the first part of July, and if this happens, peas will be bunched and come in a rush to the canners so that they cannot be handled well. Corn may be able to stand it, provided it has been planted and started well, but tomato plants just set out will not make good progress. It takes an even distribution of rains, with sunshine and warmth, to produce good crops, and this we have not had, and even under the most ideal conditions from now on it is doubtful if the lost time can be recovered. The crop outlook is anything but encouraging as we write.

Evidence of this was seen in the reported acreage of tomatoes as given by the Department of Agriculture and published in these columns last week. And further evidence is shown this week in the report from the same source on peas. By whatever means they assemble these figures, it must be said for them that they are usually very correct, and certainly they are disinterested.

We have heard reports this week of peas on the lower Peninsula doing very well, despite the too much rain and not enough warmth, because the soil there is mainly sandy and drains quickly. On the other hand, the pea louse has already made its apearance on plants hardly six inches high. Peas ought to be about ready for the canneries now in this section, but it will be weeks before the factories can start up. And if the pea lice are beginning already, they may beat the canners to it in their favorite sections.

Corn planting is "way back" in this section, as it is, we understand in every other section. The result can only be a cutting down of the proposed acreage.

Tomato plant beds are in good shape, it has been shown, but they are not making the progress their owners would like to see; and those who counted upon getting an early start with tomatoes may find themselves fooled. The plants in the fields now do not look well; they are yellow and not sturdy-looking, as they should be at this time. But most of them are yet to be put out, and even the ground to be prepared. You can't prepare ground with a heavy downpour every other day or so. For the benefit of the man in town, let us say that they have had to close public golf courses because the turf was too soggy and wet. This may convey to them some idea of actual conditions in the farming sections.

Fruits are making good progress. The bloom has been wonderful, and there has been no frost damage reported, unless the most recent visitation, as we write, has touched New York State's fruit belt, although we are assured that the weather has been so backward there that the trees are not far enough advanced to be hurt. If that is so, then, but little can have ben done on any canner's field crops. But in the main, tree fruit crops give excellent promise. On the other hand, the strawberry crop has been hampered, owing to lack of warmth and sunshine. They should be plentiful and cheap in this market at this time, but they are hard to find, and then only at high prices.

THE MARKET—As you will see by reading the reports of all leading canned foods markets, the demand is dull and dragging, even when supplies are down to the vanishing point. The reports say that the retailers and wholesalers are finding business quite good, but they are covering any lack of goods by the purchase of the smallest possible quantity to tide them over from day to day. The jobbers now realize that spot tomatoes are gone—not a half million cases all told to supply practically three months, or a normal demand for over three million cases. Spot tomato prices are advancing slowly, but the buyers remain undisturbed. They pay the advance and refuse to extend their buying.

They want the better grades of canned corn which are extremely hard to find, and standards are now coming in for attention and better prices, but there seems always some corn canner willing to take lower prices, and this market lacks the snap and strength that nearly all other items show.

With spring the people want green peas, and the demand for the canned article is at its heaviest point, but the buyers cannot find the goods. It is now a matter of paying whatever price asked if the goods can be located.

String beans and spinach are also coming in for a good demand and are strong. The canners are trying to take care of the demands for spinach by buying the raw stock at high prices. They are paying more than they should for it, and more than it is worth. It is said California is through with its spinach pack, and that it is small. It will be some time before New York State can get busy on spinach, and this is one of the reasons why canners here are paying the prices they are.

Sweet potatoes, pumpkin, apples and all those items usually figured as specialties—that is, out of the line of staples—are down to the vanishing point in spot supplies, and mostly out of quotation.

With the exception of tomatoes, which are up from 5c to 10c all along the line, there are no changes to record in actual prices this week; but it is to be noted that the whole market is buoyant and strong. In face of the usually light demand, this is a strong feature in favor of the goods. If any buyer ever "busted loose" and bought a real block of goods, it would probably cause a small-sized panic in prices. And he might not be as foolish as this sounds, for present prices may seem very cheap next fall, if not before new goods are possible. All prices are much lower than they ought to be in face of actual conditions, spots and crop outlook. The market is dead, but full of interest and worth watching.

NEW YORK MARKET

Spot Buying Very Slow Despite Known Low Stocks—Yet Prices Are Stiffening—Spot Tomatoes Advancing—No. 3 Tomatoes at Wide Variances—Western Future Tomatoes Selling at High Prices—Inquiring for Spot Corn—Maine Corn Canners Are Taking No Further Business.

New York, May 22, 1924.

By "New York Stater,"

Special Correspondent "The Canning Trade."

THE Spot Market—Buying of spot canned foods has been a very slow affair in the local market during the past week, and the situation presents no fundamental changes. While buyers are undeniably short on many items of canned foods, they are nevertheless most conservative in their purchasing for spot delivery, and brokers in particular report that there is no "pep" in current operations, and consequently little in the way of commissions for them or sales for their principals. Buyers have been "in the saddle" for so long that they appear reluctant to let the canners rule the market for even the few weeks of the remainder of the season, and what normally would be a strong and advancing market for the canners is turned into a dull routine market, with no speculative interest noticeable. Despite these conditions, prices have been stiffening, and this affords a true index of the actual strength of canned foods today.

Southern Tomatoes—Maryland canners are awake to the strength of their position in the present market, however, as evidenced by the sharp advance which has been scored in prices. County canners are quoting $1.05 to $1.07½ per dozen on standard 2s, and it is difficult to locate any in Baltimore under $1.10. There is a wide range of prices heard on 3s, the market grading all the way from $1.35 to $1.50, but the quantity available at the inside price is not large. The future market, however, is rather unsettled, and has not advanced in proportion with spots. It is noticeable, however, that some of the canners who have been forcing the market and, incidentally, depressing prices have at last "gotten wise to themselves," as one factor phrases it, and are changing their tactics. Of course, if a canner wants to run his factory at a loss, that is his own business, until his friends can call in alienists; but he injures all of his competitors by underestimating costs and selling below production cost, and this is a matter of interest to all. It would seem that the time is opportune for the organization of a "Kanners' Kosts Plan," which can take the situation in hand, and give a few lessons in figuring costs to the ever-optimistic packer who thinks he can pack and sell for less money than anyone else in the game.

Western Tomatoes—Mid-Western tomato canners are no longer a factor in the spot situation, having cleaned up their stocks; but they are still getting business on futures, quoting the market on the following basis: Standard 2s, 95c to $1.00; 3s, $1.40, and 10s, $4.50, all per dozen, f. o. b. cannery.

Standard Corn—There has been a good inquiry for standard corn noted, and the spot market is steady to strong. Southern packers are quoting the market at 97½ cents per dozen, f. o. b., with extra standard held at anywhere from $1.05 to $1.10 per dozen. The market on Western is quoted firmer at $1.00 per dozen, f. o. b. cannery, with many of the canners well sold up. The Iowa and Nebraska canners are keeping close record of their future sales, which were well over the million-case mark by the first of May. The market on futures of Mid-West pack is held at 95 cents per dozen, with 10s at $6.00 per dozen, and 1s selling at 70 cents per dozen, all prices being f. o. b. cannery.

Maine Corn—Maine corn canners are not taking on any additional future business, and the protracted spell of rainy weather is giving them serious concern. Most of the packers sold very conservatively this year to avoid the necessity for pro-rating deliveries this season, and it is well that this precaution was exercised. The last business booked on futures was reported placed at $1.45 for fancy Crosby and $1.70 for fancy Golden Bantam.

The Weather—Weather conditions this spring have been anything but favorable for the growing of good canning crops, and buyers who have made ample provision for their early requirements by placing future business in fairly liberal quantities are now satisfied that they have made a wise move. Any material crop damage, which might be reflected in extreme pro-rating would certainly be reflected in sharp price advances, especially in view of the sold-up condition of the marekt on the 1923 pack, and higher prices, while benefiting some of the trade at the time, would later on react unfavorably upon the entire industry.

Salmon—Pinks are showing some strength in Seattle, and the market has been advanced to $1.30 per dozen in one or two quarters, although it is still possible to buy at $1.25. The market for reds remains steady to firm at $2.35, f. o. b. The pack of salmon in Alaska this year, because of expected stricter curtailment of fishing operations by the Government, is expected to be materially under that for 1923.

Spinach Firmer—The closing of the spinach canning season in California finds the market in a strong position, with very little in the way of surplus available. The California Packing Corporation has advanced its prices, and is now quoting as follows: Fancy 1s, $1.10; 2s, $1.30; 2½s, $1.60, and 10s, $5.00, all per dozen.

Sardines—There has been a little larger quantity of new pack Maine sardines available for prompt shipment, and the market is held at $4.35 per case for keyless quarter oils, f. o. b. Eastport, with the small stocks of old pack still available held at the same figure. Trading has been quiet, however.

Canned Prunes—The California Prune and Apricot Growers' Association expects a good pack of canned prunes this season, but is not taking future business. A short time ago the Association announced that it had abandoned the "pernicious" practice of s. a. p. and f. o. p. future selling, and announced that hereafter no future business will be booked by it.

Offer New Tuna Fish—New pack California striped tuna is now being offered for prompt shipment, the market being quoted at $4.00 per case for quarters, $6.50 per case for halves, and $12.00 per case for 1s.

Canned Fruits—The canned fruit situation is quite firm on spots, and considerable interest is being shown in futures. Many of the independent packers have announced opening prices on new pack fruits, while other packers are accepting business, guaranteeing their prices, when named, to conform with the prices of certain other canners, or to be a certain percentage under those of the California Packing Corporation for the same size and grade.

Trade Items—Frank E. Booth, president of F. E. Booth & Co., well-known California canners, with headquarters in San Francisco, is on a trip to the Orient.

F. Bauer, canned foods buyer for Jaburg Bros., bakery supply house, has resigned and will be associated with S. E. Comstock, well-known canner of Newark, N. Y.

Col. W. R. Roach, prominent canner of Grand Rapids, Mich., is here this week, stopping with his brokers, North & Dalzell.

Thomas G. Cranwell, president of the Continental Can Co., sailed for Europe today.

Lee Dingee, sales manager for the Fame Canning Co., and Wakefield & Co., is in the market this week.

Frank E. Gorrell, secretary of the National Grocers' Association, visited friends here this week. Mr. Gorrell is just back from a trip to the Coast, and stopped off at Dallas for the convention of the American Wholesale Grocers' Association there last week.

Albion Gill, president of the Chinook Packing Co., of Chinook, Washington, was in the trade this week.

Joe Diflo, spot canned foods buyer for R. C. Williams & Co., is seriously considering the purchase of a golf outfit this spring, and plans to go out and take the measure of some of the brokers who are always talking golf to him. It ought to be easy for a buyer to win from a broker just now, judging from current market conditions.

John M. Chapman, former representative of the J. K. Armsby Co., here, and canned foods buyer for Austin, Nichols & Co., many years ago, was visiting some of his friends along Hudson street this week.

CHICAGO MARKET

Weather Against Crops and Sales—New California Packs Being Offered—Snow in Wisconsin—N. C. A. and Wholesale Grocers in Town Next Week—"A Wheelbarrow-load Market."

Chicago, May 22, 1924.

By "Wrangler,"

Special Correspondent "The Canning Trade."

Too Cool—The weather is not "canned foods weather," neither for growing the crops, or selling the finished product. It is too cool for the seed to sprout, and not quite cool enough to inspire good, hearty canned-food-consuming appetites.

New canned foods of the 1924 pack are beginning to be offered on the market. California 2½ Royal Anne cherries have been offered of the 1924 pack at $3.25, f. o. b. cannery, for fancy grade, 50 cents per dozen lower than last year. California fancy Columbia River Chinook salmon has been priced for the new pack at about 12 per cent on the average as to sizes of cans and styles of container lower than the 1923 price, and Baltimore and some Southern localities are offering new-packed strawberries, for prompt shipment, at a price a little lower than the 1923 price, and canned spinach is now ready for shipment from California and from Maryland at prices just a little lower than last year, and the season of the new supply comes on apace, faster than we can realize.

A long-distance talk with the Fort Atkinson Canning Co., John A. Hageman, president of that good Wisconsin concern, gave the information that there was a light snow at that place May 19th, and that the Jefferson cannery belonging to the Fort Atkinson Co., a short distance from Fort Atkinson, had suffered from a fire. The damage was not very serious and will be immediately repaired. Some canned peas stored in the cannery were damaged by water, but the fire did not reach them.

I have heard that the directors of the National Canners' Association will meet in Chicago at the Hotel La Salle on Wednesday, May 28, 1924, at 10 o'clock A. M. I am not informed as to whether there is a special purpose for the meeting.

The National Wholesale Grocers' Association will be in annual session at the Hotel La Salle, Chicago, at that time, their dates for their convention being May 27, 28, 29, 30, 1924. It is possible that some important conferences between the wholesale grocers and the canners may be held during the convention. The grocers will have a big convention, I am told, as they have a fine program, and Chicago, being centrally located, usually draws good, big convention attendances.

It will be very plain to those who go to the trouble to read this communication that I am evading the issue which is to give news about canned foods. The truth is that there is no news about canned foods, as the market is in a rut apparently and cannot get out. It is a wheelbarrow-load market, and the wholesale grocer who said that he had a larger stock of canned foods in his pantry than in his warehouse, knew what he was talking about, and said a lot.

There will probably be a conference between the canners and the wholesale grocers in Chicago next week during the convention of the National Wholesale Grocers' Association for the purpose of organizing the big proposed advertising promotion, and undertaking to raise a fund of five hundred thousand dollars by co-operation between the wholesale grocers and the canners for the purpose of advertising canned foods over a period of three or five years.

The grocers seem to be in earnest about it, and if they can get the co-operation of the canners, they will put the proposition over, but they must have help from canners, supply concerns and brokers.

When you get the wholesale grocers interested in a plan or an undertaking that seems practical and shows a way of increasing business and profits, they will contribute liberally and do more than their share to put it across.

My friend, the editor of The Canner, of Chicago, is not a fundamentalist; he is one of those destructive critics that the Methodists are making so much fuss about recently. I wrote planting in this column recently, and the printer man set it up packing. It was about peas, and the editor of The Canner, of Chicago, drew attention to the error and "chuckled with glee" to think that I had stated that "packing of peas was proceeding rapidly."

Well, it is rather a compliment than otherwise for a critic to have to seize upon a typographical error in order to criticize one, but I forgive him. "Let the heathen rage! They can't hurt a Christian!" I am reminded of a story of an old-time negro preacher. He rose in the pulpit and said to his congregation: "Beloved brothers and sisters, I am gwine to preach a sermon to you today and I am gwine to divide it into three parts. In the fust part I am gwine to tell you what I am a-gwine to preach about. In the second part I am gwine to preach about what I told you about, and in the third part I am a-gwine to explain to you about what I preached about,"

He knew the mental limitations of his congregation, and that is why I am taking so much trouble to enlighten the editor of The Canner, of Chicago.

ST. LOUIS MARKET

Demand Better Than in Past Few Weeks, but Still Quiet—Wet, Cold, Backward Spring May Cut Down Acreages—Tomatoes Firm—Peas Strongest Item on the List—Hoping for Late May Shipments—Standard Corn the Best Mover Now—String Beans and Spinach in Demand.

St. Louis, May 22, 1923.

By "Missourian."

Special Correspondent "The Canning Trade."

The Market—There is a uniform quietness prevailing in all canned foods. There is a restricted demand, better, however, than there was several weeks ago. Hand-to-mouth buying still continues and in small lots or in medium-sized quantities, and the result is that there are no features. Owing to the prospective higher costs of canning, the absence of much future buying and other things, together with an almost complete clean-up of all 1923 lines, spot stocks should look good if there were better business conditions. There is an absence of speculative buying, and dealers will not take more than they can utilize in the immediate future. There does not appear any reason why spot goods should not be attractive, because weather reports state that unfavorable weather for the growing of vegetables and fruits prevails in many sections, where crops for canning purposes are grown. There has been a wet, cold spring that has retarded planting. For this reason there has been a backward start, and some of the best informed canners believe that there will be a big cutdown in acreage.

Tomatoes—There is a more general activity in tomatoes than there was. Strength has been given to No. 2s. No. 3s and gallons are not active, but there is a little freer movement in both. Prices are held firm at packing points. A report prevails that the big acreage that was expected in the South may not produce as big a yield as was expected, unless growing conditions become more favorable.

Peas—The strongest item on the list is peas. Stocks of standard 4s and 5s sweets are about cleaned up, both at canning points and in jobbers' stocks. There is a general demand, also, for smaller sieves and better qualities. Early deliveries from the South are attracting attention. Offerings for shipment in

the latter part of May have been taken up quite liberally. The movement of spot peas continues, and there is a demand for a greater range of sizes and qualities. There are some intermediate types which are available and which are now used when others cannot be had.

Corn—A quietness prevails in corn. Standard is the best mover, because fancy is cleaned up.

Miscellaneous—String and stringless beans are in excellent demand. Succotash, spinach and limas are attracting more attention than they did. Asparagus is having a fair call.

Fruits—The trade is awaiting word from leading California packers for their opening prices. However, they do not seem to be in any hurry to announce them. Spot fruits of all variety and grades are getting more scarce not only here, but on the coast. Standards No. 2½s cling peaches lead in the interest and are showing an upward trend. There is a scarcity of pears, and when found commands a premium. Cherries are steady. Apricots are well maintained because of a scarcity. Pineapple has been quiet. Apples are slow sellers.

Frank E. Miller, president of the Green County Bank, of Springfield, Mo., and H. G. Geyer, an attorney, of Neosho, Mo., have become interested in the development of a 2,700-acre tract of land in the western part of Howell county, Mo., near Siloam Springs, where grape growing will be undertaken on a large scale by a colony that will be placed on the tract.

The market prices are as follows:

Canned Corn

No. 2 Fancy Country Gentleman, f. o. b. Minnesota	$1.35
No. 2 Golden Bantam, Fancy, f. o. b. Minnesota	2.00
No. 2 Standard Evergreen, f. o. b. Minnesota	1.10
No. 2 Extra Standard Evergreen, f. o. b. Minnesota	1.10
No. 2 Standard, f. o. b. Illinois	1.00
No. 2 Standard, f. o. b. Iowa	1.00

Canned Tomatoes

No. 2 Standard, f. o. b. Indiana	1.25
No. 3 Standard, f. o. b. Indiana	1.75
No. 10 Standard, f. o. b. Indiana	5.40

Canned Peas

No. 1 Alaska, Fancy, f. o. b. Wisconsin	2.55
No. 2 Alaska, Fancy, f. o. b. Wisconsin	2.25
No. 3 Alaska, Fancy, f. o. b. Wisconsin	1.70
No. 2 Alaska, Extra Standard, f. o. b. Wisconsin	1.00
No. 3 Alaska, Extra Standard, f. o. b. Wisconsin	1.50
No. 4 Alaska, Extra Standard, f. o. b. Wisconsin	1.30
No. 2 Sweet, Extra Standard, f. o. b. Wisconsin	2.25
No. 3 Sweet, Extra Standard, f. o. b. Wisconsin	1.90
No. 4 Sweet, Extra Standard, f. o. b. Wisconsin	1.60
No. 1 Sieve Sweets, Extra Standard, f. o. b. Wisconsin	2.00
No, 2 Sieve Sweets, Extra Standard, f. o. b. Wisconsin	1.60
No. 3 Sieve Sweets, Extra Standard, f. o. b. Wisconsin	1.40
No. 4 Sieve Sweets, Extra Standard, f. o. b. Wisconsin	1.45

MAINE MARKET

Cold, Damp Weather Causes Sadness Among Canners—Many Acres Not Even Plowed Yet—Impossible to Find Any Futures—Stringless Beans Also Sold Up—Lobster Season Discouraging—Sardines Too Scarce to Keep Plants Running.

Portland Me., May 23, 1924.

Special Correspondent "The Canning Trade."

By "Maine,"

COLD, Damp Weather—The writer has called this morning upon several Maine canners, and has heard from each one the same sad story of the serious effect on this continued cold, damp weather. This is the very time when about all vegetables should be in the ground, and today there are many acres not yet ploughed because the land is so wet. Farmers are wondering if their acreage might not be better used this season for other crops. Canners are endeavoring to fix their faith in the promise of "seedtime and harvest."

Corn—Corn sold well at the beginning of the season, and for the past month has been offered sparingly, owing to the adverse weather. It is now about impossible to find futures in any amount, and there is every evidence that a possible carry-over by those not sold out will be valuable property in October. While in the earlier sales the Golden Bantam predominated, later demand is for Crosby corn, both future and spot.

Stringless Beans are sold out, and the canners are now trying to hold their planters to raise the full amount of acreage agreed upon. It is discouraging to both grower and canner to have the season open up so slowly. The acreage this year was increased considerably over the past volume, but does not promise to produce any more bushels unless the weather improves.

Lobster—The lobster season is also very tardy, and discouraging to the canners. At current prices the fishermen can only be paid about half of their former rates; this discourages them from work and makes the supply of fish uncertain. The ice has not yet moved from the harbors, and no work of any account can be done in the factories.

Clams are practically done for this year, though one or two canners hope to run the limit of the season, June 1st. For the most part the fishermen are getting interested in other work, and the factories are not receiving sufficient supply to warrant operations. Practically all contracts are filled, with a very small surplus to care for the usual summer demand.

Several of the sardine factories in the eastern end of the State opened work early in the month, but have now been obliged to let up again, owing to the lack of fish. One harbor down the coast did show quite a run of fish, but these were soon used up, and no more have appeared.

Blueberries are growing in importance, to the canner and to the trade, and it is hoped that a good production may be enjoyed this season. The early promise is of a fair yield, canners are preparing to improve their methods and extend inspection, and it is anticipated that the quality of the product may be built up to the same high standard as is enjoyed by other lines of Maine canned foods.

CALIFORNIA MARKET

Tentative Prices on Cherries Lower Than Last Year—Spot Salmon Higher—A Good Demand for Spot Fruits—Good Quality Apricot Crop—New Prices on Figs Are Attractive—Coast Notes.

San Francisco, May 22, 1924.

Special Correspondent "The Canning Trade."

By "Berkeley,"

CHERRY Prices—Tentative opening prices on cherries have been named by the California Packing Corporation to try out the market, and considerable interest is being taken in this fruit by buyers, since prices are materially lower than those named a year ago. These prices are guaranteed against formal opening prices to be announced later, and are as follows: Choice No. 1s, $1.85; No. 2s, $2.35; Uo. 2½s, $2.85, and No. 10s, $10.75. Standard No. 1s, $1.50; No. 2½s, $2.45, and No. 10s, $9.25. Seconds No. 2½s, $2.10; Water, No. 2½s, $1.95, and Solid Pack Pie, No. 10s, $5.25. These prices are based upon 6½ cents a pound to the grower, as compared with 10 to 12 cents last year. Last year No. 2½s standards opened at $2.85, as compared with $2.45 this year. The entire cherry list is quoted at marked reductions from last year's prices, but it is believed that it will be the only fruit to be lower. The California Cherry Growers' Association has placed a minimum price of 6½c a pound, net to growers, on this year's crop. Last year the minimum was placed at $8.75. The lower price set this year is due to the carryover of the canned products from last year.

Salmon—Several Pacific Coast packers have advanced prices on holdings of pink salmon, and very little is being offered for less than $1.30. Some lots are available at $1.25, but some of the stock offered at this price comprises reconditioned lots packed during the war period. Packing operations are commencing in Southeastern Alaska, and new pack fish will shortly be available. There is quite a noticeable demand for California white-meat tuna fish, but stocks are very light.

Fruits—The demand for spot stocks of California fruits has been quite good of late, and it is estimated that forty per cent of the carryover reported on April 1 had been moved by May 15. Standard cling peaches have been closely cleaned up, and with the possible exception of cherries all stocks of fruits will likely be out of first hands before the new canning season commences. Even cherries may be cleaned up under the stimulus of lower prices.

Apricots—While the California apricot crop will be much less than that of last year, the quality promises to be good, as nowhere are the trees overloaded. Every effort is being made to secure water for irrigation, and orchards are being cultivated carefully. Few buyers are in the market for canning stocks, and prices have not been definitely established, but these will range well above those of last year. The crop in Alameda county will probably be less than one-half that of last year, and that

of Santa Clara county will also show a falling off. The outlook for canning peaches remains unchanged, with the crop in Sutter county promising to be about half the size of that of 1923. In the San Joaquin Valley the output will be closer to normal.

Figs—The opening prices on California canned figs, put out recently by the California Peach and Fig Growers' Association, have attracted considerable attention. Canned figs are becoming quite popular, and with the acreage devoted to this fruit increasing at a very rapid rate, figs will soon be an item to be considered in the California canned fruit pack. Three canneries will be operated this year by the Association, and the output is expected to be much larger than that of last year, when an early rain caused damage to the crop. The opening prices on the Association's "Purple Ribbon" brand of Kadota figs in syrup is as follows:

No. 10—Large	$19.00
No. 10—Medium	20.00
No. 10—Small	21.00
No. 10—Petite	21.00
No. 2½—Large	6.00
No. 2½—Medium	6.00
No. 2½—Small	6.00
8 oz.—Medium	1.85

California figs in syrup are quoted as follows:

No. 10—Jumbo	$10.25
No. 10—Large	10.75
No. 10—Medium	11.50
No. 2½—Jumbo	3.10
No. 2½—Large	3.40
No. 2½—Medium	3.60
No. 2½—Small	3.70
No. 1—Large	2.10
No. 1—Medium	2.10
No. 1—Small	2.10
8 oz.—Medium	1.25

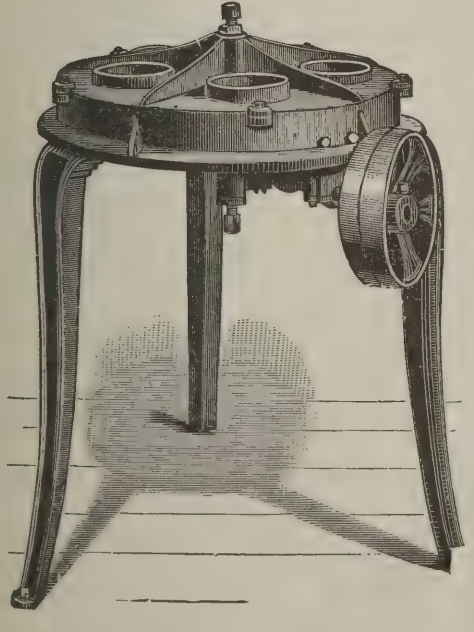
A pack of Kadota figs in water is made, and there are also preserves, solid pack pie figs and other grades of both Kadotas and Calimyrnas.

Coast Notes—Ground will be broken shortly at Ripon, Cal., for a condensed milk plant to be erected by the Meyenberg Evaporated Milk Co., of San Francisco. The plant, which will be ready for occupancy in the fall, will cost about $100,000.

What The Brokers Say.

Aberdeen, Md., May 21, 1924.

Tomatoes—We are having a better demand for spot tomatoes, and the No. 2 size has advanced to $1.10 per dozen. Strange to say, 3s have not advanced in sympathy with 2s, and they are still available at $1.35 per dozen, either packers' or buyers' labels. In looking up our old records we find that this time last year No. 3 tomatoes were selling at $1.75 per dozen and the future price was $1.22½. Now spot No. 3 tomatoes are $1.35 and futures $1.25. There are always some tomatoes packed from the early Jersey crop prior to the regular packing season, but these are mostly packed in the smaller sizes. There will be no 3s packed worth mentioning until the latter part of August, which means that there are virtually three months in which to sell the small surplus of spot 3s tomatoes. With 2s getting pretty well cleaned up, we expect to see a better market on 3s in the near future. Watch this size. We can still buy 1s at 60a62½c, and 10s at $4.25a$4.50.



The market on future tomatoes is unchanged. Most jobbers have contracted for a fair portion of their requirements, and the market is temporarily at a standstill. We are having a very backward spring in this section, and from present indications the season is going to be late. We quote, subject to confirmation, No. 1 standard tomatoes, 55c; 2s, 85a90c; 3s, $1.25a$1.30, and 10s, $3.90a4.00, all f. o. b. respective shipping points for shipment when packed.

Corn—We are having a good demand for the better grades of crushed sugar corn. Extra standard quality is getting pretty well cleaned up.

We are booking orders for future corn at $1.15 for standard shoepeg, $1.25 for extra standard shoepeg, $1 35 for fancy shoepeg, and 90a95c for standard crushed sugar corn, all f. o. b. respective shipping points.

C. W. BAKER & SONS.

Stevenson's Pineapple Slicer.

A machine for the slicing of Pineapples from 3-16 to ¾ of an inch in thickness, and cuts each and every slice even and of the same thickness. It is easily adjusted and is made substantial and durable. It is made either for hand or power. The legs are sufficiently splayed to admit of placing a tub under the machine.

What Canned Foods Distributors are Doing

Wholesale Grocers' and Canners' Difference Thing of The Past, Says McLaurin—More Talk of Merger of Two Organizations—Coast Cooperative May Amalgamate—Canned Foods Advertising Campaign Plans Still Hanging Fire.

About Swells—Wholesale grocers generally are satisfied with the adjustment on "swells" arranged for last February, and the canning and wholesale grocery trades are now working in very close harmony, according to J. H. McLaurin, president of the American Wholesale Grocers' Association.

Discussing this problem at the annual convention of his organization, held in Dallas, Texas, May 13-16, Mr. McLaurin said: "The temporary arrangement concluded in February last with the canners concerning an allowance for swells appears to have met with the approval of wholesale grocers generally. The quesiton is, perhaps, one of the most difficult with which buyers and sellers of canned foods have had to deal. The question as to the most equitable and satisfactory plan by which for a canner to protect his customer against losses resulting from swells or the packing of imperfect products is rendered unusually difficult because it deals in a very large sense with a hidden defect, and one that may develop either in the jobber's warehouses or on the retailers' shelves.

"It is a pleasant thing to say that the work of the special committees of canners and jobbers dealing with this question was very much facilitated because the men on both sides were able to approach it with complete confidence in the desire of all parties to bring about an understanding or plan that would prove mutually fair and through the operation of which no improper nor undue advantage would accrue to either buyer or seller. We have perfect confidence in the fact that the officers and members of the National Canners Association indulge the very sincere desire, and likewise the very earnest purpose, to protect the interests of the buyer against swells or spoils, and we take this occasion to express to the canners our appreciation for the splendid attitude assumed, not only in this matter, but in other questions which we have found it necessary to discuss with them.

"No report of the work of the special committees of the National Wholesale Grocers Association and the American Wholesale Grocers Association in connection with the adjustment of swell allowances, would be complete without special reference to the effective efforts put forth in these meetings in behalf of wholesale grocery interests by Arthur P. Williams, of the well-known institution of R. C. Williams Co., wholesale grocers of New York city. Mr. Williams attended all meetings of the special committee working on this matter, and was by far the leading spirit in the discussions and adjustment of the question. As a leading wholesale grocer, a large buyer and a student of food distribution, he is well qualified to render the yeoman service which he has rendered in connection with this question. He is entitled to, and I am sure will receive in connection therewith, the fullest appreciation of the wholesale grocery trade of the United States."

One Big Selling Organization—Wholesale grocers and chain store buyers are greatly interested in a revival of the plan to merge the leading California cooperative fruit associations into one big selling agency, to cut overhead of marketing and to give greater control over the market situation. The Sunland Co-operative Sales Association, formed recently ostensibly to act as sales agents for the Sun Maid raisin growers, was believed at the time to be the groundwork for one big agency to handle the fruits of all of the growers, and it is believed now that the former theory was not misplaced. Further developments will be watched with interest.

Canned Foods Advertising—Nothing further has been done in the plan for a national advertising campaign for canned foods. The preliminary plans of the sponsors for the campaign have been approved of, and an attempt is now being made to work out the financing of the movement with a minimum expendtiure of time and trouble to all concerned. Canners, brokers and wholesale grocers have endorsed the movement, and it is probable that a real campaign will grow out of the recent meetings held in Chicago and New York on this subject.

Canned Foods Week—The Canned Foods Week Committee of the National Wholesale Grocers Association will hold a special meeting at Chicago on May 30, in conjunction with the annual convention of the National Wholesale Grocers' Association, and it is probable that the co-operation of the wholesale grocery trade in the movement next year will be much more spontaneous and widespread than was the case this season.

The Two Associations—There has been nothing definite done as yet looking towards amalgamation of the American Wholesale Grocers Association with the National Wholesale Grocers Association. It is known, however, that practically all of the personal differences which have hitherto acted as a bar to such amalgamation have been eliminated, and members of both organizations are favorable to the idea. One prominent wholesale grocer, an official of the National Wholesale Grocers Association, discussing the plan with the representative of The Canning Trade today, said: "Nothing definite has been done on the merger idea, to my knowledge, but I think the plan is a good one, and I am heartily in favor of any such action which will unite all elements in the wholesale grocery distributing business." It is probable that representatives of the two organizations will meet in executive session in Chicago late this month and definitely bury the hatchet, although actual merger of the two associations may not be accomplished immediately. It is to the credit of both associations that the proposed merger comes at a time when each organization admits candidly (although of course not in public) that it has tested the mettle of its rival and found it good, so the merger, if it comes, will come not as a surrender of either organization, but rather as the result of a desire on the part of both interests to adopt a more conciliatory attitude towards the views and aims of the other, to the end that the entire trade of the country may be fused into one powerful organization.

Chicago will be the mecca for many wholesale grocers, manufacturers and brokers this week, when the annual convention of the National Wholesale Grocers Association gets under way.

EDITORIALS

PATERNALISM RUN RIOT—It can very easily be recalled when America's real patriots, men of mental vigor and ability, warned against our Government becoming too paternalistic; pointed the dangers in the bureaucratic drift; said plainly that too many laws would breed disrespect, and that morality cannot be compelled by legal enactment. As if to show their superiority to these great men of the past, but in fact merely displaying the smallness of their own abilities, the present Congress has been and is busy doing the very things which these great men warned against.

Our own Senator Fernald, speaking in the Senate, warned his fellow-senators against the danger of increasing bureaus, with all their additional employes and added costs to the taxpayers, and the Senate went right on, faster than ever, adding new jobs for new jobholders, both men and women. The soldier bonus recently passed, with its added billions of dollars to the taxpayers' burdens, is bad enough, but it immediately calls for the appointment of a new bureau, with thousands of clerks and appointees, and not only at Washington, but in every individual state, doubling again the tax upon the country. Were things sensibly administered by these representatives at Washington, the country would rejoice in the advance of pay for our mailmen, for they deserve it; but the added millions on top of the squandered billions tend to irritate and annoy the people.

And now, as if further to harass the business man, they will pass another amendment to our Constitution regulating child labor, and setting the limit as high as 18 years. It avails nothing to point out the unreasonableness of such a thing, for the one thing that that gang cannot understand is common sense. Despite all the quackery one hears, employers do not want children about their factories, but a boy or girl of 18 is not a child. This matter has been quite well worked out by industry in general, and is in good position today, where each case is judged upon its own merits, the fit youth employed, and employment given to the youth whose parents need and must have his or her help in the struggle for existence. But now will be passed this further amendment, a further distortion and disspoiling of our once sacred Constitution, and with its passage the appointment of an enforcement law, with another horde of enforcement agents. The prohibition law made this enforcement feature infamous for all time, with its horde of grafters, blackmailers and thugs, until today we are presented with the nauseating spectacle of a land with a million stills and daily growing worse. And this last enforcement horde will not be one whit better in their quest for graft and what money they can make out of the factory operators. There is no need for this amendment, as the States can and will take care of this child-labor problem, and vastly better than the Government can possibly do. But they think they are catering to the labor vote, and they are buying votes now, not looking to the interests of the country or business.

Next they will pass the farm-loan bill to reimburse the farmers for any losses on wheat or other crops, and if they do they will soon have to pass similar legislation to reimburse all business lines for losses, for if the farmer is entitled to this, so is every other industry, the canners, for instance, who can the farmers' products. Then we will have reached the real heights of paternalism, and we can all sit back and let the Government furnish us what money we need or require, and it will be just as well, for there will be no business to conduct.

What a sad mess we have come to! And it will only grow worse in this presidential election year.

A TASK FOR BUSINESS MEN—This all brings home to us what has so often been said, and that is that the business men of this country must stir themselves, take a hand in these political matters, and sweep out of the halls of Congress these business incompetents, these politicians pure and simple, and replace them with business men. Men who will sit as a board of directors in this greatest business on earth, and administer it as they would their own business, bringing to it all their business ability, and no more hesitate to kick out of the doorways of Congress those Pharisees who insist upon the letter of the law and pay no attention to its spirit or intent than they would if these attempted to enter their own offices. There is no use appointing strong men and competent men to the presidency if they are to be handicapped by an incompetent, politics-for-politics-sake Congress. That les-

son should be so plain to all the country that it needs no repeating. Business men must take a hand and clean out this mess and put things into their proper shape again.

N. C. A. HOLDS SPRING SESSION—The Board of Directors of the National Canners Association held its regular spring meeting in Chicago this week, and as the matter of reduced dues was one of the principal things to be acted upon, the industry will read an account of the meeting with much interest in our next issue. The National Wholesale Grocers Association was in convention in Chicago at the same time, and the opportunity was undoubtedly taken advantage of to further iron out any litle kinks that may still remain in trading between these two important factors. This, too, will be looked for with interest.

BOTULINUS POISONING AN ACCIDENT—One of our good friends out in California has just written us a rather interesting letter, in which he says:

My Dear Judge: I thought the attached might be of interest to you. This follows upon the result of eating—olives. (The following clipping was enclosed:)

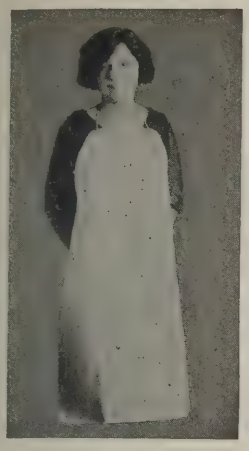
"Death by Poisoning Held an Accident.

(Special Dispatch to The Chronicle.)

Hanford, May 17.—Death as the result of botulism is construed as an accident by accident insurance companies, it was shown today, when the general agent for a well-known accident insurance company delivered a check for $7,500 to the widow of Banker O. D. Canaday, whose death occurred in Coalinga a few weeks ago, when he and a half-dozen others were poisoned from eating some articles of food at a dinner given in the oil town by the Growlers' Club. O. D. Canaday was one of two who died, and the diagnosis of physicians was 'botulism.'"

By the way, you will be getting in bad one of these days for being so plain spoken about the name-on-the-label law. Don't you know the —— canners buy their peaches out here, put on their own label and to all intents and purposes are—[the Eastern State] peaches. And others do likewise.

We know how it feels to have an opinion of our own and to express it; but on the head of it could not get a job in Hell-ifax selling ice-cream cones."



We would like to submit that interesting letter without further comment, as it contains several things that ought to make you think. But we have to admit that the news about the peaches is not entirely new. We have even known that thousands of cases of Maryland canned tomatoes went into other states and later appeared as the products of these states; even as much Baltimore packed spinach appears on the market garbed in the labels of a state famous for fine spinach. And the funny thing about it is that most of these canner-buyers scoff at Maryland canners and canned foods! And a lot of these good and holy buyers fairly froth at the mouth when they consider the scofflaws of the prohibition enactment. Ain't nature funny?

Distinguished citizen of Baltimore;
A scholar and a gentleman.

DIED MAY 24, 1924.

IN the death of George N. Numsen the canning industry of Maryland, but more particularly of Baltimore, has suffered a severe loss. He knew, and no man better knew, the story of Maryland canning, for he remained to the close of his busy life a diligent student of canning and of canning problems. And who knew better than he knew the possibilities of Maryland canning, which possibilities he strove to promote with an unwearying persistence. George Numsen was a citizen of Maryland, and was always mindful of his duties and obligations as such; he would serve the state, nor could he better serve it than by dedicating his life to the development of its industrial energies; and so he would give abundantly of his rich resources of mind to the great business of canning, which during many years has been indigenous to the soil of Maryland. He was one of the founders of the Baltimore Canned Goods Exchange, and his interest in that oldest of canned foods organizations remained, to the very close of his busy life, unchanged of its early zeal and fervor. He was a shrewd observer of men and of events. He pleaded for co-operation among canners, for oneness of aim and of purpose; he believed in organization. The canning industry of Maryland had upon many an occasion honored him, just as the State itself had honored him, and just as the city of Baltimore, in which he was born and in which he spent all of his long and honorable business career, had honored him; for George N. Numsen was indeed a man among men. He was a gracious and kindly man, unfailing, gentle and soft spoken. And yet he was a man of action, a vigorous and aggressive man. He was a man of high principles, which he would never allow himself to compromise. His life was a full life, full of opportunities for service to his fellow-men, and full of the splendid compensations which come as the reward of right thinking and of right doing. And what pity it is that his life was not fuller of years, for there remained much work for him to do. But he has finished his course, leaving behind him the heritage of a spotless name and an unblemished reputation. The canning industry can ill-afford to lose its Numsens—it needs their vision and their idealism; it needs their counsels and their admonitions; it needs the fine quality at their leadership. During all his life George N. Numsen shed lustre upon the great business in which he was engaged; he enriched and dignified it. The Maryland canning industry today is all the poorer because of the death of one of its chief spokesmen and the most valiant champions—George N. Numsen.

Do You Know

— that PROTEXU CANNERS APRONS will save you money because they are **low in price, unusually durable,** and afford **greater protection** for your employee?

Scientifically constructed of fine, strong fabric, amply coated with tough, elastic, **wear-proof rubber,** Protexu Aprons are especially designed for all canning operations. Hundreds of canners use them exclusively, finding them **most economical.**

Moreover, Protexu aprons are **soft, flexible, lightweight** and extremely **comfortable** to wear. Made in any standard or special size, with or without bib.

COLORS: Black or White
30" x 38" — $12.00 dozen
38" x 44" — $15.00 dozen

Send trial order TODAY — and learn how much apron service you can buy for your money. **Maximum protection** at **minimum expense guaranteed.** In ordering, please mention style and size desired. Samples of fabric, showing quality, on request.

BEAR BRAND APRONS, another popular style (grey), **large in size,** and weighing only **16 ounces,** cost **$15.50 dozen.**

William M. Gross.

Makers of all styles aprons for all industrial purposes

PLANT PATHOLOGY

Some Wisconsin Exepriences and Prospects of Interest to Canncrs.

By R. E. Vaughan
University of Wisconsin

IN your preliminary program this subject was scheduled for discussion by Prof. L. R. Jones, head of the plant pathology department, University of Wisconsin, but, owing to the spring meeting of the National Academy of Science and National Research Council at Washington, D. C., found it impossible to be with you. Since I have been in close touch with canners' problems in Wisconsin since 1911, Professor Jones suggested that some of our experiences and prospects would be of interest to you.

It used to be said that blights, rusts and rots were unpreventable, and that when they attacked our plants there was nothing to be done. Under that philosophy diseases flourished for hundreds of years; but outside of pagan lands a man who would teach that philosophy today would be a fit subject for an insane asylum. Diseases of plants, like diseases of man and animals, are slowly yielding to the pressure of the philosophy based upon scientific knowledge that health is normal and diseases abnormal.

Pea Diseases—Pea diseases have increased with the increase in the pea canning business. The most important disase was first called blight, but has since been more properly termed root rot, because of the important and striking symptom of rot on the roots. At first root rot was supposed by canners to be due to weather conditions alone, and hence thought impossible to control. It was a common practice among the earlier canners to own their land and grow peas year after year on the same soil. For awhile this practice was attended by increasing yields, but after a few years it was noticed that the yield was falling off. Where over 200 cases per acre had been the rule, less than 100 cases were coming in, and these of inferior quality.

The failure of pea crops was thought by some to be due to depleted soil fertility. It was thought that peas took something out of the soil which, if it could be discovered, and returned, would restore profitable production. Tests were made with different fertilizers, which in some cases resulted in crop increase, but where root rot was present little benefit could be seen. As was to be expected, the addition of phosphoric acid, potash and lime gave best results. Experiments along this line are being conducted by Professors Whitson and Musback, of our Soils Department.

Upon the examination of some root-rotted vines, the late E. W. Duckwell observed that no nodules were present. It was his opinion that the peas grew as long as they were able to obtain nourishment from the soil, and then, not being supplied with their proper amount of nitrogen, they began to wither and die. His suggestion for control was to purchase pure cultures of nitrogen-fixing bacteria and soak the seed before planting. Our experience in Wisconsin has been that pure cultures of nitrogen-fixing bacteria serve a definite purpose, but are not a significant factor in the control of root rot. These cultures give beneficial results when used on soil new to peas, on soil which has not raised peas for several years, where the soil has a tendency to be acid, or where for any reason there may be a deficiency of these specific bacteria present. Considerable research is being conducted in Wisconsin by our Agricultural Bacteriology Department under the direction of Prof. E. G. Hastings and Dr. E. B. Fred. Recently Dr. A. L. Whiting, formerly of Urbana, Ill., been added to our staff. The effect of inoculation on different soil types and in different rotations is being studied, and a large number of Wisconsin canners will report results at the end of the season.

In 1910 the Plant Pathology Department was established in the College of Agriculture of the University of Wisconsin, with Prof. L. R. Jones in charge. One of the first problems to be solved was that of pea blight, and Professor Jones visited the Columbus Canning Co. in late June. On July 1, 1910, he wrote to Mr. Andrews as follows: "The chief trouble is with the rot at the base of the stems and the upper part of the root, just below the ground. This rotting gradually cuts off the water supply and the tops dry out."

"This base stem rot is a disease found in the older pea growing sections near Ohio and New Jersey, in America, and is also found in Europe. As I explained to you, the evidence from practical experience in the laboratory at experiment stations in these sections is to the effect that germs of this blight may be introduced from the seed, and when once in the soil may persist for at least two years. I can find no further evidence as to whether they may pass through the silo and into manure. Personally, I should not expect that there would be serious danger from this source, however.

"The seed infection comes from spots which appear on the surface of the pod and eat their way through into the seed, in some cases discoloring the seed. I found no such spotted pods in your field, and think that if the weather continues dry and hot until your seed crop matures there will be little, if any, such pod spotting. If, however, it should turn wet, this might be expected, since the disease passes from the base of the stem upward along the stem and leaves, and reaches the pods last.

"The only practical remedial measures lie along the two lines of care in securing healthy seed and in rotation of crops.

"Regarding crop rotation, it has been found that continuous cropping with peas tends to bring on this disease through accumulation of the infection in the soil; that change of crop for a single year is insufficient, but that if other crops are put on the land for at least two years the trouble may be largely avoided."

Wisconsin experiences since 1910 have shown that the observations of Professor Jones were all right as far as they went, based on the information at hand, but that they did not go far enough because information was lacking. However, subsequent reaserches have shown that one of the chief fungi associated with the cause of pea root rot is not carried by the seed, but is present in any soils in varying amounts. Dr. F. R. Jones has been for a number of years studying pea root rot, and has found this fungus widely prevalent in Wisconsin soils and those examined from other pea-grow-

An Open Letter To Canners:

4 years has proven— The Long, Low Temperature Exhaust after 4 years of Pioneering by us—has proven to many canners to be just what they needed to reduce Pinholing, Puffs or Springers, retain the Color, Shape and Flavor—thus reducing Swell Allowance.

A Pre-Cook— What Canners now have in mind—is to install the Long, Low Exhaust in the same space they now use for the Short, High Heat Exhaust per line and so increase their Cooker capacity by reducing the final cook and so speed up their lines.

Floor Space Capacity Our Rotary Aluminum Exhauster solves this difficulty as in the same floor space now used by the Short, High Heat boxes, our Rotary Exhauster will hold from 2 to 6 times as many cans and gives 2 to 3 times the length of exhaust, as any other box.

Costs less per can The price per can of our Rotary Aluminum Exhauster including Aluminum tank, roofs over cans, Bronze Bushings, Gears, Steam pipes, etc., is less than any other box giving the same number of cans per minute, same length of exhaust and in the same floor space. The comparison being, as 3 is to 5, or 3 is to 6, or one-half the cost per can.

No Steam Fog Our "Under Feed" Rotary Exhauster used practically all the steam—as no steam can be seen escaping, until you get close up to box. This is due to the fact that the cans enter and discharge at bottom of tank. This accounts for the "No Steam Fog" in Cook room, as compared with the fog made by water or other steam Exhausters.

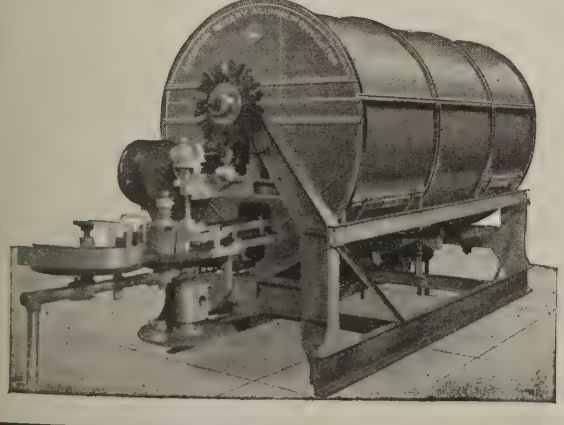
Uniform Heat Treatment— Every can gets like heat treatment, because the cans are carried by the horizontal shelves around the circle. This Rotary movement through the steam applies equal heat to all parts of the cans—Top, Bottom and Sides and the positive feed for every can—gives the same time of exhaust to all cans.

No Drippings in Cans The Roofs over each 2 rows of cans on each shelf, circulates the steam and prevents driping and dirt entering the open tops of cans.

Few Parts— Having only ten shelves inside the box reduces bearings to the minimum—The shelves swing so little that there is practically no wear on the Bronze Bushings and only 20 Grease Cups to fill, once a week or less. This Freedom from any parts is what makes our Rotary Aluminum Exhauster cost so little for Upkeep and so easy to keep clean.

Sanitary Self-Cleaning— The tank or cover being round, causes all Dripping and slopping to flow to the bottom and thus keeps the interior Sweet and Clean—while other Water or Steam Boxes collect these, which calls for constant cleaning to keep sanitary.

In case of trouble If for any reason a "Shut-Down" is necessary during the day's run—it is only a matter of closing the steam valve and the heat is cut off instantly, but this cannot be done with the Water Exhaust, except by removing the cans or turning in cold water.
The claim that exhausting cans in water—heats the contents more quickly than in steam—is not borne out by fact or experience.



Dr. Bigelow says: Dr. Bigelow, of the National Canners' Association, in his answer to a Canner's inquiry—in the Canning Trade, August 20th, 1923, as to whether Water heats more quickly than steam, said: "Water does not transmit heat to the can any more rapidly than steam at the same temperature."

Dr. Bitting says: Dr. A. W. Bitting, in the Canning Age, January, 1924, regarding water cookers of the Dixon type, said: "The large radiating surface made all such open tanks extravagant of fuel and heated the factories unduly."

California Canners Several California Canners have made tests to determine whether or not water heats faster and is more economical than steam and found by test that more time and heat was required than in steam.

Perfect Circulation— This proves that steam is better than water, when properly distributed, as we do, by the manner of introducing the steam in the bottom of box, so that the live steam does not hit the cans direct and is circulated by the action of the rotary shelves and the Natural Law of heat rising, which makes for perfect circulation at low temperature (from 150 to 200 deg. F.).

World Wide Use— Many of the largest canneries in California, Washington, Alaska, Hawaii and Australia are now giving the Long, Low Exhaust by the use of our Rotary Aluminum Exhausters. We will be pleased to send full details on request.

ing sections of the country. This root rot fungus belongs to the class of water molds and becomes most destructive when the drainage is deficient. The pea root being soft and succulent, with a fishy sheath surrounding a group of vessels at the center, forms a favorable place for fungus development. Furthermore, once the soil is thoroughly impregnated, an interval of two years between pea crops is not sufficient for subsequent pea crops to escape the disease. In fact, an interval of eight or ten years or more is sometimes necessary. All of this experience goes to show the necessity of rotating crops from the first, and never allowing the root rot fungi to become established.

Pea root rot may be produced by several different fungi, which makes the solution of the problem more difficult. Some of these fungi do damage at higher temperatures or different moisture content than others. It is the consensus of opinion that the more intensively peas are grown on a soil the greater the amount of destructive fungi which develop. Even on soils in which peas have been placed for the first time root rot fungi may be present. This increase in knowledge of the habits of root rot fungi has led to important changes in canners' practice. Companies owning their own farm land have been largely superseded by companies renting land for a year or two or securing farmers to grow peas on contract basis. It is practically impossible to maintain a satisfactory rotation on a specialized farm, while on a dairy farm peas may be grown once in four to six years without much danger from root rot.

There is no strict rule in regard to the best rotation of peas. However, our farm crops and soils departments advise not to have two cultivated crops follow each other. A rotation which has proved itself satisfactory in many places is: Peas, clover, grain and corn. In such a rotation as this the corn is heavily manured and little or no fertilizer added to the other crops. Alfalfa is sometimes used instead of clover, in which case the rotation would be longer.

Since pea root rot fungi may be so widely present, it is highly important that canners learn to recognize the early syptoms of disease, and thus be in a position to avoid unfavorable conditions in the future. This question was raised at the Short Course for Canners, held at the Wisconsin College of Agriculture in December, 1923. The discussion was led by Prof. L. R. Jones, who explained the lack of funds for new lines of work, and put forward the challenge that if the canners wanted a "speed up" campaign of education they should provide an industrial fellowship similar to that which had been previously provided by kraut and pickle men for their particular problems.

This challenge has been met, the funds voluntarily provided on an acre basis, and the new assistant will be on our campus about May 15. The man selected is M. B. Linford, of the Utah College of Agriculture. He gives every promise of being a live wire, comes with training under a man from our department, will have the benefit of personal contact with Dr. F. R. Jones, who has done the preliminary work on root rot, and will give his whole time and attention to this problem. After the field season Mr. Linford will continue research work in our laboratory on some phase of pea root rot. This field survey by Mr. Linford will be supplemented in the rush season by Dr. F. R. Jones and the speaker as far as opportunity permits.

In the studies on pea diseases which have been carried on attention has always been given to the possibility of securing new strains or varieties which would show disease resistance. The breeding of peas has been in charge of Prof. E. J. Delwiche, of our Agronomy Department, located at the branch experiment station, Ashland, Wis. Many crosses and selections have been made. Most of these have naturally been rejected, but one, the Horal, a cross between the Hasford and Alaska, has been retained as worthy of multiplication. This new selection combines a fair degree of disease resistance with uniform heavy yield of small sized peas. A holding company has been formed among Wisconsin canners so that this may be multiplied in quantity and given a wide test before it is released to the trade. Another disease resistant selection of promise is Rice's "330," developed by Wilbur Brotherton, Sr., of the J. B. Rice Company. It is possible that further breeding work with this strain may be necessary before it meets the exacting needs of canners. In any case there is need for other resistant strains, and any canner finding such will confer a favor on himself and fellow canners by letting the fact be known.

Cabbage Diseases—The only mention that will be made at this time regarding cabbage diseases is the success which had attended the development of yellows resistant Hollander and All Seasons. The development of the later variety, which is valuable for making kraut, has been made possible through the co-operation of the National Kraut Packers' Association. The Wisconsin Experiment Station, with the United States Department of Agriculture co-operating, has survived the production of mother seed and inspected the growing commercial crop with gratifying results. Experimental work is now in progress looking toward the production of resistant strains of Copenhagen, Glory and All Head Early. While it is true that the type of disease in cabbage is different from root rot in peas, the same general result may be hoped for. With increased knowledge will come changed practices for meeting the situation.

Cucumber Diseases—The cucumber disease that has been of greatest interest to truck growers and canners is the cucumber mosaic. The control of this disease has been found not in rotation of crops or in selection of resistant varieties, but in eradicating from the vicinity of the cucumber field certain weeds, such as wild cucumber, physalis, milkweed and pokeweed, which are wild hosts and carry the trouble.

One of the outstanding and favorable observations about the research that is being conducted at Wisconsin on plant diseases and related lines is the spirit of co-operation which exists. This spirit has made possible the cordial relations which obtain between the college on the one hand and the pea packers, kraut packers and pickle packers on the other.

We confidently expect that the researches on plant diseases, under way or contemplated, will add to our fund of knowledge on canners' problems and pave the way for advance in the future as they have in the past. Wisconsin is known as a progressive state, and will keep in the lead with regard to plant health.

A NEW FEATURE IN INSURANCE.

TWO hundred employes of the C. A. Durr Packing Company, in Utica, N. Y., have joined with their employers in acquiring group life insurance protection at a low wholesale cost.

The group policy, placed with the Metropolitan Life Insurance Company, involves a total insurance of $220,000 and provides protection of $1,000 for each em-

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

ploye. Foremen and executives are protected for amounts of $1,500 and $2,500, respectively. In addition to the life insurance protection, the policy also provides for accident and illness benefits of $10 weekly, to be paid to disabled workers.

Utica is one of the more than four thousand cities and towns in the United States in which the Metropolitan Life maintains a visiting nurse service, and the arrangement under which the Durr employes were insured also provides them with such attention without cost. The Metropolitan nurse will assist in the care of any insured employe who is ill and will advise with the patient's family on the proper carrying out of the attending physician's instructions. The employes also will receive at frequent intervals the Metropolitan publications. These, dealing with health and sanitation subjects, are compiled by experts, and are distributed without cost to the insured.

SPINACH YIELDS.

By the Soil Improvement Committee of the National Fertilizer Association.

One of the most important vegetable problems in Northern New Jersey and elsewhere has been the "yellowing" of spinach. At the request of the Passaic County Board of Agriculture, Prof. L. C. Schermerhorn, New Jersey Experiment Station, started investigations last summer at Richfield to determine, if possible, the cause and remedy of the disease. Since the Norfolk Truck Experiment Station had reported malnutrition as a distinct cause of "yellowing" in Virginia, a series of fertilizer tests were included in the work.

Yields of Spinach in Fertilizer Tests.

Treatment.	Series A Yield per Acre Bushels	Series B Yield per Acre Bushels	Average Yield per Acre Bushels
400 lbs. 9-8-3..... At Planting.	349	592	470
800 lbs. 9-8-3..... At Planting.	359	626	492
1,200 lbs. 9-8-3.....	595	610	602
1,600 lbs. 9-8-3..... At Planting.	613	917	770
Average Yield of Checks	198	236	217

"The stand," says Professor Schermerhorn, "on all the check plots was noticeably poorer than on any of the plots which received plant food. The average yield on the four check plots was 216.5 bushels, as compared with an average of 594.2 bushels for the fertilizer plots."

The investigations indicated that from 1000 to 1600 pounds of a high-analysis fertilizer, applied before planting on the late fall crop, may be recommended.

THE LARGEST BARTLETT PEAR ORCHARD IN THE COUNTRY.

Not in California, Not in New York State, but at Betterton, Md., and Owned by a Canneress, Mrs. Evelyn Harris.

SOUNDS funny, doesn't it? But it is a fact, nevertheless, for our well-known friend, Mrs. Evelyn Harris, lady advocate of better canning, sweet singer and noted demonstrator of food products, says that she was told by both the Extension Bureau of Maryland and by the U. S. Department of Agriculture that hers is the largest orchard in the East, if not in the United States. And she goes on: "We have 10,000 Bartletts about ten years of age and nearly 2,000 which are around 50 years of age. We have 500 Seckels, some Mannings, Duchess and Lecount, and around 8,000 Kieffer trees." And she explains that all of this fruit has been well taken care of, is regularly sprayed, and this season has a fine crop set.

Mrs. Harris' object in writing us was to tell us the sad news that her husband died last month, leaving this big orchard, the farm and the cannery, which, together with her large, but young, family, is a task to look after a little too big for even her remarkable energy. She wonders if there is not some canner who would welcome the opportunity these splendid Bartlett pears affords. There have never been enough good Bartlett pears put into cans; never enough such Bartletts to can. This orchard and farm are right in the heart of the Peninsula's best fruit section, on the Chesapeake Bay, where the peaches which once made Maryland famous for their size, and particularly their quality, grow to perfection. The value of the Bartlett is not in its size, its appearance or its shape, but in its wonderful flavor and aroma, which seems to be enhanced by canning, and which forces "ah's" of appreciation from the consumer when the can is opened. These Maryland Bartletts are famous for this flavor, and if there are not canners anxious to avail themselves of this opportunity, then we underestimate the quest for real quality by the canners.

This orchard is so famous that the photogravure sections of the great Sunday newspapers carried pictures of it in blossom and showing the spraying outfits at work. Little by little Maryland's pre-eminence in food products is silencing the unknowing tongues of her detractors. Immense orchards of supreme quality fruits; corn canners with capacities of whole states of the West; lima bean canners who speak of 200,000 cases as ordinary work; tomato canneries that pack more tomatoes than dozens of others can do. These things make Maryland not a state of small things, but of the great, leading things.

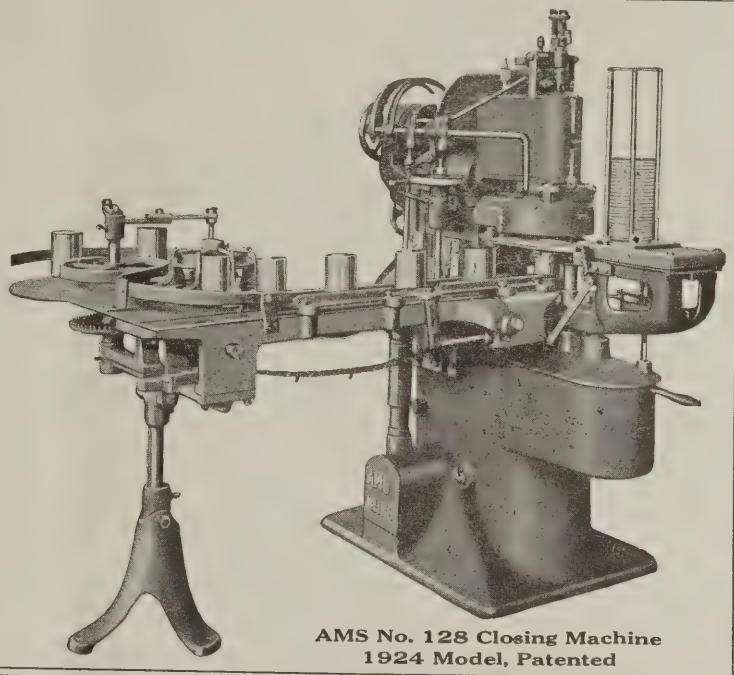
MILK CANNERS FORM OWN ASSOCIATION.

We take this from the most recent issue of the Interstate Grocer:

"Representatives of almost all of the evaporated milk manufacturers of the country recently met in Chicago and organized the Evaporated Milk Association. L. R. Hardenbergh, of the Carnation Milk Products Company, was elected chairman; C. T. Lee, of Nestles Food Co., vice chairman, and E. G. Annell, Oatman Condensed Milk Company, treasurer. Other members of the executive committees are W. T. Nardin, Pet Mlik Sales Corporation; C. S. Parsons, The Borden Company; H. C. Carr, Libby, McNeill & Libby, and J. F. Enz, Danish Pride Milk Products Company.

The Association will inaugurate a campaign of education directed to the housewives of America, featuring the wholesomeness of evaporated milk and the economy of distributing a billion quarts of milk each year in tin cans.

It has taken more than thirty years of painstaking effort to bring this method of marketing milk to the present high state of perfection. The new, handy, sanitary tin can now in use makes possible the distributing of milk of the best quality to millions of homes, combining purity with freshness and high quality with lowest possible cost.



Herbert C. Hooks, well known throughout the milk industry, and a member of the committee representing the industry in the Food Administration during the war,

ROBERT A. SINDALL, *President-Treasurer*

HARRY R. STANSBURY, *Vice-President*

has been selected as secretary to conduct the activities of the new Association.

Hooks has been active as a manufacturer of evaporated milk since 1906, when he became identified with the Hires Condensed Milk Company at Philadelphia. Having served in all the departments of a rapidly growing business, Hooks became general manager in 1911, continuing until 1918, when the Hires Company combined with others to form Nestles Food Company. He recently resigned the treasurership of this company in order to administer the work of the Evaporated Milk Association."

EXPORTS OF CANNED FOODS IMPROVING.

THE most noteworthy item of the export trade in canned and dried foods during the past month was prunes. Decreases occurred in the other dried fruit products, but compared with the corresponding month of the two preceding years, very large increases appear. During the last ten months 261,000,000 pounds of dried and evaporated fruits were exported, an increase of almost 100,000,000 pounds over the same period ending April, 1923. The demand from Germany and Central Europe was the cause of this activity. An improvement was shown in the exports of canned fruits during April, as compared to last April, but the exports during the past ten months are decidedly below those of the same period a year ago. Since April is a dull month in the export trade in canned fruits, not much significance can be attached to this condition.

Canned vegetable exports show a large gain over the March exports, and are larger than the amounts exported during the two previous Aprils. It is believed that these statistics show that the increasing exports of canned vegetables during the past two years are indicative of the trade tendencies in these commodities.

Canned, condensed and evaporated milk exports, taken together, are about equal to the exports during April, 1923, although less than in April, 1922. There has been a marked decrease in canned milk exports since January of this year, but this was to be expected, as during the closing months of 1923 and of January, 1924, the exports were unusually large.

Exports of canned meats show a fair increase during April, and the rate of increase is comparable to that during the past ten months.

The fact that, taking these products separately, compared with April, 1923, increases of exports appear in all items but canned salmon, is an indication of a healthy condition in the export trade in canned and dried foods.

DESERT WASTE.

F. H. Bilderback, Bristol, Pa.

Deserted in the desert,
In a glaring desert waste,
No verdure gleamed around me,
No dessert could I taste.
My dessert waist kept shouting,
For some viands grand,
But the desert waste kept taunting,
There's no dessert here but sand.

CLIFFORD BROKERAGE MOVES.

We announce the removal of our offices from our present location, 425 South Seventh street, to 711 Clark avenue. The new location is in the branch postoffice building at the corner of Seventh and Clark avenue.

Our new offices are very advantageously located right in the heart of the wholesale grocery district. Another advantage is that we will be located on the street floor.

We exend a cordial invitation to call upon us at our new location any time after June 1, 1924.

STRAWBERRIES!

The Crop Everywhere Is Late This Season.

STRAWBERRY movement is in full swing.

A 50 per cent increase brought the total shipments of last week (May 11-17) to 2,256 cars, of which Tennessee furnished 743, North Carolina 661, Arkansas 442, and Louisiana 238.

This, however, was still 500 carloads less than the output the corresponding week last season.

The peak of shipment is passed in Louisiana, and Florida is through.

Total strawberry shipments to date are 1,864 cars short of the 1923 volume to this time.

Prices are generally higher than a year ago because of the lateness of the season.

The crop in Maryland and Delaware and Virginia is unusually late, Maryland is just beginning to ship, and only 21 cars have rolled from Virginia.

In 1923 season, to May 19, the Norfolk section of Virginia had moved 296 cars, and in 1922, to same date, 213 cars, while the eastern shore section of Virginia had moved 441 cars to same date in 1922.

In 1923 Maryland had shipped 52 cars to May 19, and 441 cars to same date in 1922.

Allowing average growing conditions from now to harvest time, Maryland and Delaware may be expected to produce a bounteous crop this season.

Growers expected shipments to begin to roll between May 20-25th from Maryland, and about June 1 from Delaware.

At the present time the plants in these states are fruiting nicely.

According to common carriers' reports to this Bureau, in 1923 Maryland shipped a total of 1,920 cars Delaware 895, and Virginia 1,110.

Maryland, though fifth in acreage, was second in shipments, exceeding all other states excepting Tennessee.

(Just previous to the above this Bureau had issued the following, and it is reproduced here because it is as true of the week of May 26th as it was before—the rains continue.—Editor.)

LEAKY SKIES INJURING THE CROPS.

Saturating rains during the past fortnight, accompanied by persistently cool weather.

And they are exerting a depressing effect in the rural sections of Maryland and Delaware—harassing and hindering field work and crop growth.

In the flat, low regions many fields resemble miniature lakes, and the roads are muddy.

In the mountainous areas of Western Maryland, floods from the Potomac devastated lowlands, doing some crop damage.

The vagaries of weather have the farmers in the doldrums.

Crops in general are making slow progress.

Wheat is showing up well, good stands and color; excepting on the lowlands the crop is poor. In southern counties wheat is heading.

Rye for the most part is in good shape. Some of it coming into bloom.

Haylands and pasture are looking good to excellent. Crison clover and alfalfa could hardly be better.

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784

BRISTOL, PA.

The area to be devoted to corn this year promises to be larger than in 1923, because of the land held out from wheat last fall. Very little corn has been planted so far. Corn will be quite late this year in getting a start.

Oats where sown and up are looking good, but growing slowly.

Indications are for an increased acreage of barley in Maryland.

Tobacco plants in beds are looking good, and are about ready to be set out.

Some acreage intended for planting to early truck crops has been abandoned and will be seeded, perhaps, to corn and forage crops.

Large increases in acreage of soy beans are looked for in both states.

Early potatoes on the Peninsula are late in coming up. Stands cannot be determined yet—not enough up. Some rot in the fields reported. Aside from lateness, the prospect appears fairly good.

Tomatoes may develop a 5 to 10 per cent increase in acreage for canning on the Eastern Shore. Present indications in Delaware are for an acreage equal to or slightly under last year. On the whole, the growing season is backward; some plants have been injured by heavy rains, and the crop will go out unusually late. Quite a portion of the intended acreage is still uncontracted. Plants in beds are doing well.

A decrease in acreage of green peas for canning is indicated in Caroline and Dorchester counties, two of the heaviest-producing counties of the Eastern Shore. In Delaware the area devoted to peas this year is several hundred acres short of last year. Recent heavy rains destroyed some peas on low lands, and aphis is working.

Asparagus acreage is incresing substantially in both states. The crop is unusually late this year. Small shipments are moving from Maryland and Delaware points at this time. Cantaloupe acreage in Maryland will be about the same as in 1923, when 1,200 carloads were shipped out. Strawberries are fruiting in central and southern counties, and blooming in the mountainous regions. Shipments from the Eastern Shore counties are expected to commence May 20 to 25, and from Delaware about June 1. Indications are for a bountiful crop. But the growers are inclined to be pessimistic on prices, owing to backwardness of the season.

Orchardists are optimistic. The condition of tree fruits leaves little to be desired. And unless something untoward happens a bumper crop is looked for.

Farm animals are showing improvement in condition with the better conditions of pasture. With many farmers there has been a shortage of feed.

Issued by John S. Dennee, Agricultural Statistician for United States Department of Agriculture, Bureau of Agricultural Economics, Division of Crop and Livestock Estimates.

FOOD OFFICIALS SEIZE CANNED SALMON SHIPMENTS.

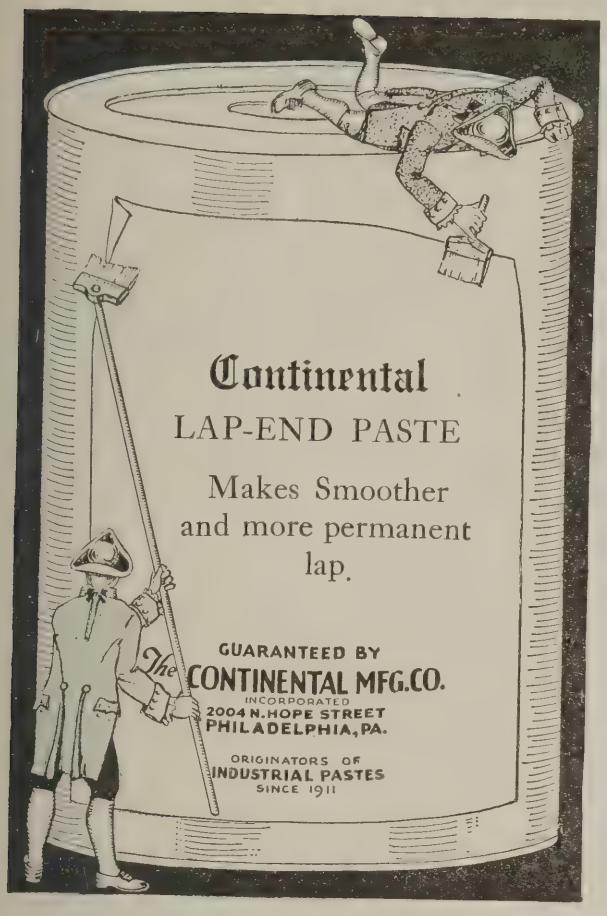
Press Service of the U. S. Department of Agriculture.

THE seizure of five hundred cases of canned salmon on the ground that the product consisted in part of decomposed fish, which was recently contested in the Federal Court at Montgomery, Ala., resulted in the condemnation of the product by the court as being adulterated in violation of the Federal Food and Drugs Act. This seizure is part of a campaign to stop the packing of salmon which have been held so long out of water as to be wholly unsalable in a fresh fish market, say the officials of the Bureau of Chemistry, United States Department of Agriculture.

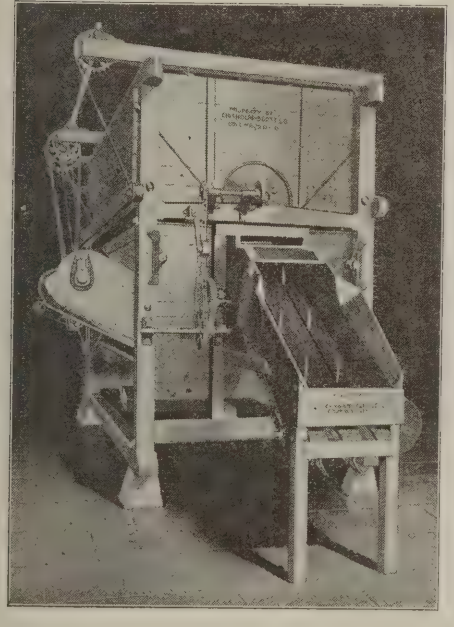
This seizure, tried in Montgomery, involved a shipment of salmon packed by the Southern Alaska Canning Company, of Seattle, Washington. It took the jury but fifteen minutes after hearing the evidence to render a verdict for the Government.

A seizure action contested recently in St. Louis involved more than 1,500 cases of canned salmon containing in part decomposed fish packed by the North Pacific Trading and Packing Company, of Klawack, Alaska, and San Francisco, Cal. Another seizure action tried in Seattle involved approximately five thousand cases of canned salmon packed by the Alaska Herring and Sardine Company, of Port Walter, Alaska. Still another seizure action contested in Portland, Ore., included about 800 cases packed by Jeldness Bros. & Co., of Astoria, Ore. The verdict of the jury in each case upheld the main charge of the Government, which was to the effect that part of the canned salmon was decomposed and was spoiled at the time it was canned.

Fifty-eight Seizures Effected.

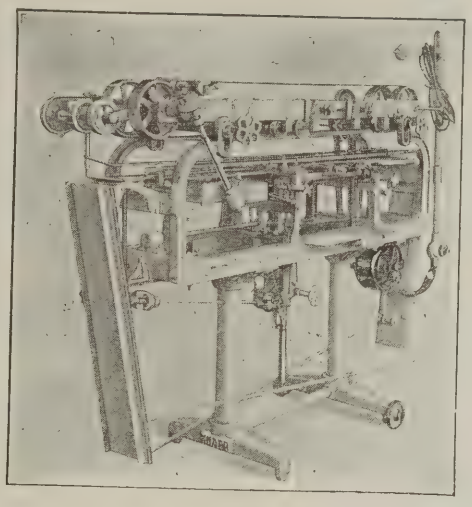


Fifty-eight seizures in all have been effected during the current fiscal year of shipments of canned salmon. Some of these seizures have been adjudicated without contest. Others are still pending in the federal courts.



The Government charged in effect in the various seizures that a portion of the salmon was decomposed at the time it was canned. This form of adulteration is due not to decomposition after canning, but to putting in the can fish that is then rotten. The food officials say that with reasonable care in sorting the packing of bad fish can be avoided.

It has been contended by some packers of salmon that it is impracticable to eliminate the canning of some spoiled fish, and that the Bureau of Chemistry has been too rigid in its examinations and in its recommendations for seizure. Practical salmon packers have testified for the Government that the spoiled salmon can be eliminated by proper sorting, and that in those canneries where reasonable care is taken in sorting spoiled salmon can be eliminated. The winning of these recently contested cases will do much, in the opinion of the officials of the Bureau of Chemistry, to settle this issue.



Practice of Packing Spoiled Salmon Persists.

The canning of spoiled salmon by a few packers has persisted, notwithstanding the efforts of food officials and of the better element in the canning trade to eliminate the practice, which violates not only food laws, but in some instances shows insufficient regard for the principles of decency, say the food officials. They are of the opinion that the recent court condemnations will have a deterrent effect upon those packers who have, either deliberately or through carelessness in sorting, canned rotten salmon. They believe that a continuation, if necessary, of such action as has been taken will either induce the salmon canning industry itself to take more effective steps to stop the canning of spoiled fish or compel those salmon canners who do not realize the harm they are doing the industry to reform their practices.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

WHAT THE BROKERS SAY

Milwaukee, Wis., May 24, 1924.

Factory, Central Southern Wisconsin—Pea prospects are very uncertain right now. With four hours of snow Monday, May 19th, and ice that night. Plants are not growing much. Plantings made on April 8th are now only 8 to 10 inches high, and we are very much afraid the cold weather will turn hot at the critical time. Plantings are bunching a good deal, so we look for difficulty at packing time.

Factory, Eastern Southern Wisconsin—We were able to get our seed into the ground in ideal shape; in fact, we mapped out our planting schedule early in the spring, and the excessive rain aided us in carrying out this schedule. In other words, just about the time we would get one week's quota into the ground, it would rain three or four days and help us in keeping other farmers from planting. Peas grown in such weather have not shown much growth above the ground, but they are making good, strong, heavy root, which means that they will not be affected by a drought later in the season. In other words, we feel that our early plantings are safe, even though we do not get another rain between now and packing season on account of the excessive moisture in the ground and the long root the peas have.

We predict a good crop of peas, but on account of the bunched planting we doubt if canners are going to be able to get them into the can as quality peas. We feel that quality peas will sell at higher prices, and we doubt if standards will hold their own.

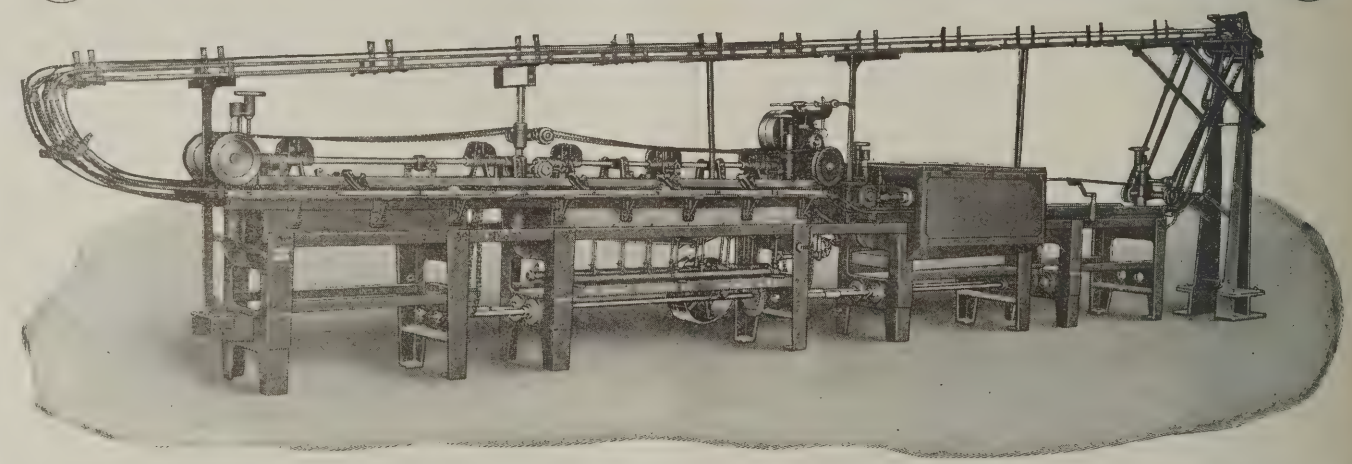
Factory, Western Southern Wisconsin—We commenced planting on April 7th, and we were obliged to lay up on account of rain only two or three days. We will finish planting on the 20th or 21st. Early peas at the present time look very promising, although the weather is too cool for rapid growth. We have some mighty nice fields and should have a good crop.

Factory, Extreme West Central Wisconsin—It is a bit early for predictions. Our seeding is all done. The weather has been cool, but the peas seem to be growing all right.

Factory, Lake Shore Section Wisconsin—The present outlook of the crop is not very good. The cold weather and rains have delayed our sowing program about three weeks. We have sowed some peas earlier, about twenty-five per cent of our entire acreage, and while these fields are now up, yet they are irregular since the lower spots have been drowned out by the excessive rains. We look for only about eighty per cent of our normal crop.

Factory, Central Northern Wisconsin—Up to date we have done but little planting, so little, in fact, it is hardly worth talking about. We are very much disappointed with the backward weather we are having, and hardly know when we will be able to continue planting schedules. The prospects at the present time are not very bright.

Factory, Lake Shore Section Wisconsin—The cold rains and weather are sure playing havoc with our planting schedules, and certainly these elements will have some effect on the crop. We have planted only about 25 to 30 per cent of our peas, and our neighbors report about the same conditions in their territory.



Note—Each year at this time we receive favorable and unfavorable crop reports, and, of course, these reports have some effect upon the market.

The situation at the present time is none to comfortable. There is no denying that the planting season is late (this condition is general throughout the State), and that the present weather is not favorable; however, we can safely assume that the weather conditions will soon change for the better.

Warm weather and sunshine—and plenty of it FROM NOW ON— should bring the crop in in good shape, and our little job now is to forget about the bad start we have had and look forward to the future.

We have always had a pea crop, and we will have a pea crop this year, perhaps not as large as expectations and perhaps larger. It is still a bit too early to worry about what hasn't yet happened. FRANK A. INBUSCH COMPANY.

Automatic End Soldering Machine With Wiping And Cooling Attachment.

The many unique features of this specially designed machine have proven very efficient for soldering and wiping the ends of all sizes of round cans. This machine is equipped with single drive pulleys for operating the entire machine except conveyor chains. The drive for can conveyor is independent so that the cans will not remain in soldering mechanism if the operation of the remainder of the machine is discontinued.

One of the essential features is the method employed in soldering, whereby the solder is applied to side only, leaving the end bright and free from solder, adding greatly to the appearance of the can. The runway guides in wiping attachment are hinged so as to allow quick removal of wiping brushes. The soldering rolls may be adjusted while machine is in operation.

The machine is supplied complete as shown, including elevator and runways.

Let us show you how to improve the appearance of your cans.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek Kewaunee, Wisconsin

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

Indianapolis, Ind., May 22, 1924.

Gentlemen:

Continuing Saturday's bulletin. Five canners in the district north of Indianapolis have telephoned in to us that ice over an eighth of an inch thick formed Tuesday night, May 20th, which killed their tomato plants. This freeze was ten days later than the freeze of 1923.

We find there has been some corn planted north of Indianapolis which has rotted in the ground and will have to be replanted. Now is the time to go after business on corn and tomamatoes before there is a further stiffening of prices in Indiana, as we have several similar reports from New York, Wisconsin, Michigan and the Tri-States.

BERT C. KEITHLY COMPANY.

P. S.—Since going to press we have word of a freeze on Wednesday night, May 21st. A temperature of 30 above zero was recorded east of Indianapolis and 28 above zero on the southern outskirts of Indianapolis. Canners state that plants were frozen stiff in their fields.

The United States Weather Bureau advise that a heavy frost last night, May 21st, went as far south as Columbus, Ind., and even down to Paoli, Ind. From telephone advices we have canners north of Indianapolis who lost most of their tomato plants in the freeze of last night.

There is an acute shortage of tomato plants in Indiana, and many canners will have to look to Georgia for plants to reset. The unseasonably cool, rainy weather in Georgia has greatly curtailed the normal supply there. Advices from Wisconsin and Michigan report snow and low temperature, with similar advice from New York and the Tri-States, with all canning crops far behind.

Our advices from Maryland this morning show nothing but abnormal weather, including heavy downpours of rain, with very low temperature. Reports of these conditions, which apparently extend through Indiana, Wisconsin, Michigan, New York and the Tri-States, are coming to buyers' attention, as there has been quite a bit of covering on future corn in the last day or so, and tomatoes are again beginning to receive attention.

With favorable weather from now on, corn and tomato planting will be at least three weeks late and an early frost will be disasterous.

Green beans are very late, and the pack will probably not be on before the middle of July. Indiana peas appear to be doing very nicely.

Wausau, Wis., May 24, 1924.

Another week has rolled by. No doubt considerable seed peas went into the ground. While there was no rain to speak of until yesterday, it was cold and cloudy all week. The seed cannot germinate under these conditions. It would be just as well off, practically, in the warehouse. It rained all day yesterday, which will delay all farming operations for a few more days, at least.

The first of June is only a week away. Ordinarily all the seed peas should be in the ground by that time. This year 50 per cent of the acreage will be unplanted on that date. There are packers who have been unable to plant an acre to date. There is just one answer to this—the anticipated acreage will be very materially reduced.

The far-seeing buyer will not delay anticipating his additional requirements on future peas. We are able to book orders for a few cars of standards on the basis of one-third standard No. 3 Alaskas or No. 4 sweets at $1.25, and two-thirds standard No. 4 Alaskas or No. 5 sweets at $1.15. Better get in on these. We can also place orders for most any assortment of fancies or extra standards at opening prices.

N. F. BROKERS' STANDING COMMITTEES FOR 1924

The following standing committees have been appointed for the year:

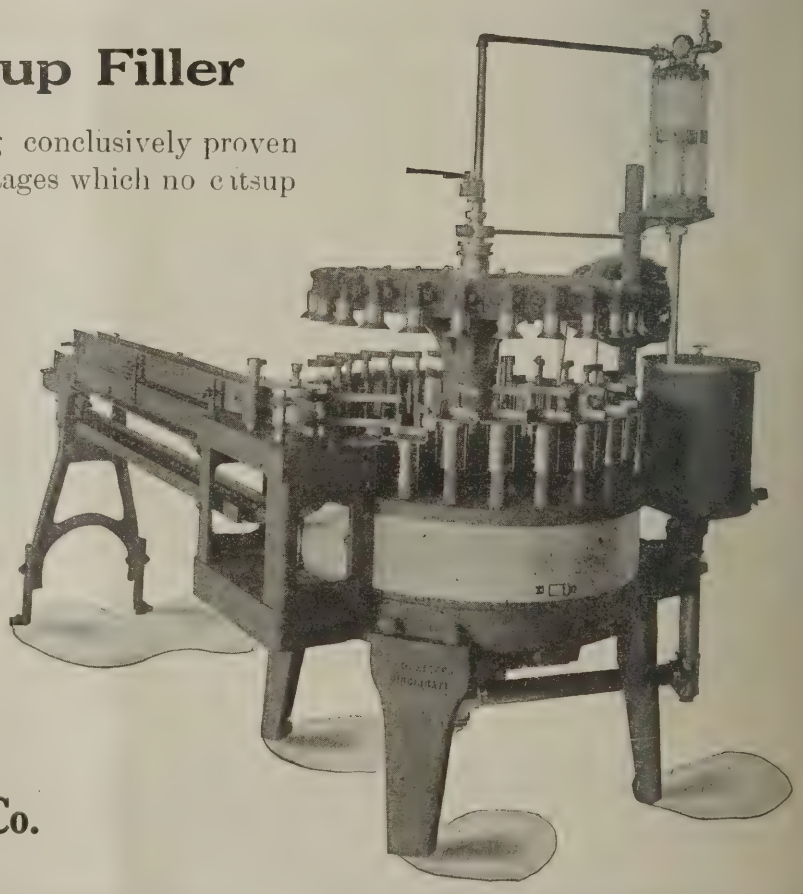
Arbitration—Walter B. Timms, New York, chairman; Milton S. Moore, Milwaukee; H. F. Martin, Roanoke; W. E. Kingsbury, Dallas.

Commerce and Transportation—O. R. Armstrong, Oklahoma City, chairman; William A. Mann, Boston; N. L. Waggoner, Los Angeles.

The Kiefer Catsup Filler

The new Kiefer Catsup Filler, having conclusively proven its worth last season, presents advantages which no catsup bottler can afford to overlook.

It fills without slop or waste and will not deposit catsup in broken bottles.



There is no perceptible loss in temperature when filling.

Metal contact is reduced to a minimum.

Nothing to take apart when cleaning at the end of the day's run.

We are willing to prove these things to you in your plant. Many manufacturers have already placed their order for this season.

Get your order in before it is too late.

The Karl Kiefer Machine Co.

Cincinnati, Ohio.

PEERLESS PULP FILLER

Fills Uniformly

The Peerless Pulp Filler is the only filler that fills uniformly—every can filled to the proper level—no more—no less.

The reason that the "Peerless" is the only filler that fills uniformly is its valve. It is correctly designed and proportioned to permit rapid filling of even high specific gravity pulp.

The Committee on Resolutions, appointed as a standing committee this year for the first time, will give consideration throughout the year to matters which should be covered by resolution at the annual meeting. Such matters should be referred to the Committee through the Secretary's office.

TOMATO FERTILIZER TESTS GIVES CONVINCING RESULTS.

RESULTS of three years' work with the fertilizers on tomatoes have just been published by the New Jersey Experiment Station. Yields produced with twenty-one different complete fertilizers, each containing a total of over 16 per cent plantfood (ammonia, phosphoric acid and potash) were compared with each other and with yields of unfertilized tomatoes.

The fertilizer was applied at the rate of 1000 pounds per acre, 400 pounds several days before planting and the balance three weeks after planting.

During the three-year period, the combined average yield of the seven highest yielding plots was 12 tons of tomatoes per acre, 4.8 tons more than the average yield of the unfertilized tomatoes. All things considered, a 2-8-6 fertilizer proved the most economical under the conditions governing the test.

TRADE-MARKS DEPARTMENTS.

Conducted by National Trade-Mark Company,

Washington, D. C.

The following are trade-mark applications pertinent to our field pending in the United States Patent Office which have been passed for publication and are in line for early registration unless opposition is filed promptly. For further information address National Trade-Mark Company, Barrister Building, Washington, D. C., trade-mark specialists.

As an additional service feature to its readers, this journal gladly offers to them an advance search free of charge on any mark they may contemplate adopting or registering. You may communicate with the Editor of this department, or send your inquiry direct to the National Trade-Mark Company, stating that you are a reader of his journal.

TRADE MARKS

Danish Pride—No. 188409. Danish Pride Milk Products Co., Sheboygan, Wis. For condensed milk and evaporated milk.

Dromedary—No. 192914. The Hills Bros. Co., New York City. For canned grapefruit.

Emerald Bay—No. 191271. Charles A. Landers, San Diego, Cal. For canned fish.

HANSEN FRUIT AND VEGETABLE FILLER

Fills Practically Automatically But Produces Hand Pack Quality

Beets, String Beans, Tomatoes, Cherries, Berries, Kraut, Etc.

Adjustable for No. 1, 1½, 2, 2½, 3 Cans. Machine also made for No. 10 cans.

Rockfield, Wis., Nov. 26, 1923.

We are glad to advise that we are very well pleased with the Beet Filler which we purchased from you and used throughout the season. It is a great labor saving device. We used it in connection with No. 2 and No. 3 cans and it gives a good fill. We can only say the best for it.

ROCKFIELD CANNING COMPANY
BY A. J. Klumb.

Sturgeon Bay, Wis., Dec. 1, 1923.

Allow the writer to congratulate you on your Hansen Fruit and Vegetable Filler. As you know, we have been experimenting for the past five years with mechanical fillers for filling No. 2 red sour pitted cherries. Up to this year when we installed two of your fillers, we had never found anything that would operate satisfactorily on cherries but since the success we have had this year with your new filler, we feel that you have a machine which will work very satisfactorily indeed.

The machine operates very smoothly without the jamming of cans and the accompanying loss of fruit and turns out a very uniform fill. We believe your estimate of capacity which you stated was 70 cans per minute to be very conservative, for we know this machine will operate very satisfactory on 95-100 cans per minute on cherries. We expect to put in more of these machines as the necessity arises and you may rest assured that we are perfectly satisfied with their operation.

FRUIT GROWERS CANNING COMPANY
BY Edw. S. Reynolds.

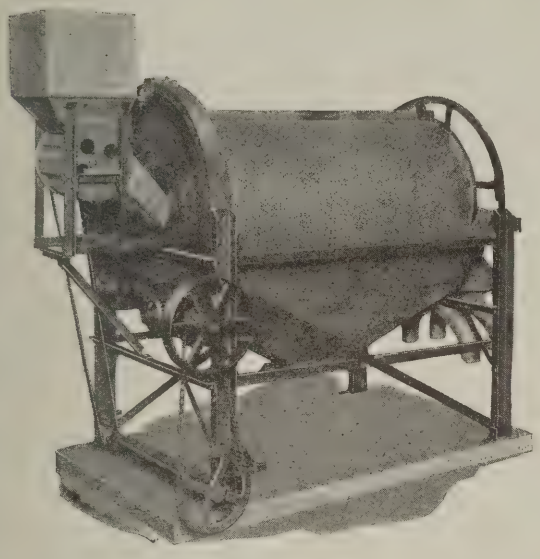
Colby, Wis., Nov. 27, 1923.

We wish to advise you that we are more than pleased with the hand bean filler, or rather as you call it, the Hansen Fruit and Vegetable Filler.

We were rather doubtful as to its capabilities until we tried it out. Wish to advise you that your filling hopper on same does not need attention, and with one girl supervising the fill of cans was all the help we needed in the canning of cut beans.

We have been complimented on the uniform fill of our beans and all we can say is we lay it all to your machine.

If you have any skeptics as to the capabilities of your filler, wish you would refer same to me or my superintendent at this plant and am sure we could soon change their opinion.



CENTRAL CANNING COMPANY
BY W. H. Christiansen, Mgr.

HANSEN CANNING MACHINERY CORPORATION, CEDARBURG, WIS.

Manufacturers of Hansen

Pea and Bean Filler, Corn Cooker Filler, Conveyor Boot, Sanitary Can Washer, Beet Topper.

The Nested Sample Grader—

Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.

Manufactured and Sold by

Sinclair-Scott Company

IN OLD NEW YORK

Business Is Good—Business among wholesale grocers and chain store distributors at this time is excellent, and it is expected that the industry will make a very favorable showing when the year's totals are in. Recent financial statements of the leading chain store organizations show very satisfactory sales and balances, and it is reported that the wholesale grocers are in just as good shape. Peculiarly enough, the canners are also rather prosperous this season, and the outlook favors continued prosperity for all, always providing, of course, that inflation is stringently guarded against.

Notes of the Jobbers—The business of the Mt. Sterling Grocery Co., of Mt. Sterling, Ky., has been purchased by the Hodgkin Grocery Co., of Winchester, Ky., and merged with the latter concern.

C. Y. Early is now vice president and general manager of the Walker Smith Co., wholesale grocers of Brownwood, Texas.

George C. Cochran, president of the Cochran Wholesale Grocery Co., of McAlester, Oklahoma, died at his home there recently. He was one of the pioneer wholsale grocers of the state, establishing his business in 1897. He was 84 years at the time of his death.

Brantley, Lowe & Co., wholesale grocers of Tullahoma, Tenn., have liquidated their business and retired. Henry King & Co., also of Tullahoma, purchased the stock of Brantley, Lowe &Co.

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

BALTIMORE, JUNE 2, 1924

WEEKLY REVIEW

Little Else Than Rain, Cool Weather, Hampered Crops and Planting—The Problem Grows Daily More Complicated —Indiana Loses Its Tomato Plants by Frost— Maryland Will Make a Record for Late Pea Packing—The Market All in the Canners' Hands.

THE WEEP OF MAY 25-30, 1924

It rained on Sunday.
It showered on Monday.
I poured on Tuesday.
It sprinkled on Wednesday.
It poured on Thursday.
It showered on Friday.

All in this City of Baltimore, and in this general territory, but also in most other Atlantic seaboard sections and far back into the country; in fact, almost everywhere, except in the far Northwest, where just the reverse conditions are being experienced. In almost every section of the country there has been a heavy over-supply of rains and cold weather, and it needs no hint that crops are being held back, plantings delayed and the prospects made extremely dubious through such conditions. If this were a mere local condition, the trouble would be bad enough, as other sections might come to the relief; but if there is any section, where canners' crops are heavily grown, not now suffering from the peculiar spring, we have yet to hear of it. From up in Maine, down through the Eastern and Southern, out through the Central West, and up into the Wisconsin-Minnesota regions the season is from two weeks to a month late, plantings far behind, and what crops have shown up are not in the best of condition, as may be supposed.

You will see elsewhere in this issue that Indiana reports ice and the loss of many tomato plants by freezing, complicating an already late situation there. Reports from Wisconsin are a mixture. Some regions have been able to make fair progress with their pea plantings, and are fairly well up to an average; others have about half normal, and still others have been able to do but very little. Others say that practically the same conditions existed last season, and that the State came through with a good crop and will do so again this year. It all depends upon which way you look at it—the buyers waive their hands in a contemptuous way and say we have always heard such things, and they always have a big crop and pack; the canner who has sold heavily of future—and most have done so—are hoping and not anxious to believe that conditions are bad, because that will not help their position, but, in fact, they are merely hoping that future good weather will make amends for the past. And, of course, it may, but the brand of weather so far served this year does not promise much for the future.

They should be packing peas here in the East, or, as it is generally referred to in market parlance, the South, and there are a few "steamboat peas" coming to Baltimore, and being handled by the canners, but the real pea-canning season is quite a ways off as yet. Over on the Peninsula they are often able to begin canning peas the last days of May and are generally done by June 10th, or thereabouts; but they will not have begun by that time this year, and the indications are that the season will run into July, an unheard-of thing for this section. Fortunately, the rains have not been a driving, tearing kind, and have not torn up and blown about the pea vines; but there has been too much water, even for the sandy soils of the Peninsula. And so it is not surprising to learn that root rot is showing, that other vines are "damping off," and Professor Corey, of the Maryland Agricultural Experiment Station says it is just the kind of weather to propagate the pea louse or aphis, as the rains and damp, cool weather kill off the natural enemies of this pest and leave it a clear field. So we are hearing much of this trouble. Pea growing has extended into the counties and sections north of Baltimore in the past few years, and there the soil is heavy, the water lays long on the fields, and the plants now look yellow and sickly. But this condition is reported even from Anne Arundel county, south of Baltimore, where the soil is nearly all sand.

This latter country supplies the string beans for early packing, and they are looking anything but well under this deluge of water and particularly because of the cold.

Strawberries which also should be beginning their heaviest time are a scarcity, and what are coming in show the effects of washing. The crop is reported in good condition and well blossomed and fruited, but it cannot ripen without bright sunshine and heat, and it has had none of this this spring.

We have said that the Indiana tomato growers have had thouble with their tomato plants freezing, and have been forced to seek new plants to replace them. In the East the plant beds are said to be doing nicely, with only small losses due to the water or floodings. It has not been possible to set them out, except in rare instances, and the plantings are, therefore, far behind. This promises to reduce the acreage, as the season is getting so late that many growers are despairing of this crop and turning to others.

The canners of Baltimore have been considerably exercised this week because the Government has established a quarantine on tomatoes out of Philadelphia. Growers in Jersey work to get their tomatoes upon the fresh markets of Philadelphia and New York, and there often forms at this distributing point gluts of these tomatoes. Commission merchants buy these up and ship them in carloads to the Baltimore canners, who use them to fill early orders for new packed tomatoes. The Government in its fight against the Japanese beetle has put a quarantine upon Philadelphia, and these tomatoes will not be allowed to come

into this State. The men in charge of this work say that Southern Jersey, which is the heavy shipper of early tomatoes to Baltimore, will not be interfered with from present indications, although they admit the beetles are not yet at work and may become so troublesome that protective measures may have to be taken.

The corn growers and canners are becoming discouraged. What corn was planted and sprouted looks sickly and ready to die; but not a great deal of it is yet in the ground, and it cannot be put there. The rains come every day and keep the ground unfit for corn planting. And this condition seems pretty general throughout the sweet corn canning regions.

THE MARKET—Just read the brokers' reports of conditions as given in this issue, and note that they warn the buyers to get their orders in now before the advance in prices begins. There is the real indication of the market, and if you sell before the market advances, it will be your own fault. You ought not to need more advice than this.

Spots are cleaning up so rapidly that they are becoming entirely nominal as to prices—that is a matter of agreement between the owner and the buyer who must have them. Another chance for the canner to show himself a business man, if he has any spots. Peas have advanced from 5c to 20c all along the line in this city. Tomatoes have so advanced in the hands of wide-awake holders, though a sleepy canner breaks this spell once in a while. Tomatoes can go to any price the holders choose to name, but it rests with the holders. A whole lot is being made of big blocks of tomatoes held here and there; they are mainly, if not entirely, myths. But the broker uses this club to get the goods at a better price for his friends, the buyers.

Prices mean but little if you have the goods and have the "guts" to ask the price. The same might be said of all futures in the face of growing conditions. The whole market is in the hands of the canners, and they should take advantage of it.

NEW YORK MARKET

A Quiet Week—Sales Light—The 70 Per Cent Spinach Pack in California Put Interest in Market—New Cherries Offering—A New Sardine Company — A Contrast in Future Tomato Prices—Spot Tomatoes Strong—Shortage of Spot Corn —Canned Fish—Notes.

New York, May 29, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

QUIET Week—The Decoration Day holiday, combined with the absence of many prominent members of the trade at the convention of the National Wholesale Grocers' Association in Chicago this week, has made for a quiet market. While Saturday will not be observed as a holiday by all in the market, many of the brokers will observe a double holiday, remaining shut down from Thursday evening until Monday morning.

Sales Light—Buyers have been confining their purchases to small lots, and there appears to be no desire to purchase beyond immediate requirements, even on items which have been very scarce. Jobbers are operating on a replacement basis, and are passing along each increase in cost to the retailer grocer, and altimately, of course, to the consumer.

Coast Spinach Pack—With the spinach canning season over in California it is reported that the pack is only about 70 per cent of that for 1923, which would make this year's production slightly under the million case mark. Most of the canners have disposed of their entire pack, but a few small lots are being offered at prices over the opening basis.

Offer New Pack Cherries—Opening prices on new pack California cherries have been named by many packers. The following table of opening prices on choice cherries, independent and corporation pack, give a line on the market this season:

	Indep.	Corp.
No. 1 Tall.....	$1.70	$ 1.85
No. 2 Tall.....	2.15	2.35
No. 2½s	2.75@$ 3.00	2.85
No. 10s	9.75@ 11.50	10.75

All of the above prices per dozen, f. o. b. cannery. The corporation price, which is of the tentative variety, is 40 cents per dozen under the 1923 opening. This is doubtless explained by the fact that there is quite a substantial carry-over of cherries in Californina this year, although stocks of other fruits have been well cleaned up by recent buying.

New Sardine Company—It is reported that a new company has been organized to take over the packing interests of the Seacoast Canning Co., in Maine. The new company is headed by Robert J. Peacock, and is composed exclusively of Maine business interests. It is further added that the new company, the name of which has not yet been chosen, takes over seven sardine canneries, two in Lubec, four in Eastport, and one at Robbinston, together with a mustard plant shook mill, fertilizer plant, and several hundred thousands of dollars worth of stock.

Sardines Are Lower—With the new pack of Maine sardines now on, the market has sagged somewhat, and offerings are reported down to $4.00 per case, ranging upward to $4.25 per case, as to brand and seller. The demand is holding up fairly well.

The Pea Situation—Southern canners in a position to get out an early pack of peas this season should find no difficulty in disposing of their pack at a good price. Seeding is being seriously delayed in Wisconsin and other mid-Western States, and jobbers are eagerly awaiting early shipments, as spot stocks, particularly of standard quality, are very close to the vanishing point.

Tomatoes—The market for future mid-Western tomatoes is held at 95 cents per dozen for standard 2s, $1.35 to $1.40 for 3s, and $4.25 to $4.50 for 10s. Contrast this with the future prices quoted by Maryland and Delaware canners, 85 cents for 2s, $1.25 for 3s, and $3.85 for 10s, and it is evident that the Southern packers are still averse to making up some of the losses they have sustained in price declines of the past few years.

Spot Tomatoes—There is a strong market for No. 2 standard tomatoes for prompt cannery shipment, and $1.10, f. o. b factory, continues the inside figure in most instances. No. 1s for immediate shipment are quoted at 70 cents, f. o. b.; 3s at $1.30, and 10s at $4.25, also f. o. b. cannery. Buying has been rather quiet for the week, however.

Future Corn—There has been no change in the future corn situation for shipment from Southern canneries. Packers quote 1s at 65 cents, 2s at 90 cents, and 10s at $6.00, all for standard quality. There is a shortage of corn on spot, particularly fancy quality, and distributors who have hitherto been handling only Maine and Minnesota packers' products are now distributing Illinois and Indiana corn, with a little fancy Ohio corn also being handled locally.

Canned Fish—Demand for the general line continues disappointing. The lateness of the season has held back the seasonal stocking of the distributors, both wholesale and retail.

News of the Local Trade—"Jim" Kenny, the well-known broker, has just returned from a Western sales trip.

James D. Dole, president of the Hawaiian Pineapple Co., is expected to visit the trade here next week.

Wm. Ely, of R. C. Williams & Co., is taking in the convention of the National Wholesale Grocers' Association in Chicago this week.

Arthur P. Williams, president of R. C. Williams & Co., is receiving the condolences of friends over the death last week of his mother, who died at an advanced age.

Royal F. Clark, president of the National Canners' Association, stopped in to visit friends here while en route from Washington to Chicago for the convention.

Edward M. Kuschbert, of the Fred C. Mansfield Co., milk canners, of Johnson Creek, Wis., was a visitor in the trade.

The California Prune and Apricot Growers' Association is packing dry prunes in 2½s this year. A shipment is now due in this market.

NATIONAL KRAUT PACKERS TO MEET

The National Kraut Packers' Association will meet at Clyde, O., on June 12th at 10 A. M., Hotel Nichols Inn. Clyde is well situated on three railroads and many electric lines, and the crowd is expected to be there.

CHICAGO MARKET

Jobbers Cleaning Out—Wholesale Grocers at Their Convention Seem Optimistic—Cherries Good in Michigan—A Large Crop of Apples Promised — Large Holdings of Fresh Apples in Storage—Little Standard Corn Left in West—Tomatoes Cleaning Up—Situation Satisfactory.

Chicago, May 29, 1924.

Special Correspondent "The Canning Trade."
By "Wrangler,"

MOVING Slowly—The canned foods market is moving along quietly, like a ship with but little ballast and with no wind in its sails, which is to say that there are very few goods for immediate delivery to be had in canned foods, and that there is no opportunity for speculation in the market.

A big convention of wholesale grocers is being held in Chicago this week by the National Wholesale Grocers' Association, and many canned foods buyers from various parts of the country are attending the convention.

Some of them have brought lists of surplus canned foods with them, copied from their stock books, and are instructing their brokerage correspondents in Chicago to close the goods out. This is preparatory to the receipt of new 1924 pack of canned foods which will soon be arriving.

All these offers are welcome to Chicago and other parts of the country by wholesale grocers who are short of stock, and in this way stocks owned by the wholesalers throughout the Central West are being adjusted and equalized. The principal difficulty in making sales of such goods is that they are either under canners' labels or the jobbers' labels who own the goods, and if the buyer wants the goods for his private label, they will have to be relabeled, entailing some expense.

There is an optimistic sentiment among the delegates to the big convention, and all the wholesale grocery buyers seem to feel that the outlook for business the last half of the year is good.

You know, in the wholesale grocery business the profits are all made in the last half of the year. If a wholesale grocer can break even on his operating and expense account for the first half of the year, he considers that he has done well, depending upon the profits of the business from July 1 to January 1.

He has been busy all summer selling canned foods and other products for future delivery, and these deliveries are all made in the fall. Sales are, therefore, large and profits are large in the last half of the year.

Michigan is going to have a good crop of red cherries this season and is making a price of $8.50 per dozen for No. 10 cans of red sour pitted cherries, f. o. b. Michigan canneries.

It also appears that a good crop of apples is likely from all localities that have been heard from, and I predict that there will not be many apples canned, from the fact that a large crop of apples is going into cold storage and will be used by the pie-makers, who are the only customers who can be relied upon to use No. 10 canned apples. Canners were very wise and very fortunate this season in not packing very many No. 10 apples, and the supply now is pretty well sold out.

The cold-storage warehouses throughout the country are still filled with apples in barrels, and the owners or holders of them are holding them at high prices and not permitting them to go into consumption.

This will entail, a little later along, heavy losses to the owners. I have inspected several varieties of apples which are on sale at the retail stores in Chicago, including Winesaps, Johnathans, Northern Spies, Baldwins, Greenings, Ben Davis and several other varieties, and they are not keeping well in cold storage. They have turned brown in the center and are pretty badly specked on the surface, and this means that they will not keep over until next year, but must be sold and consumed or entirely lost. There has been a large exportation of fresh apples in barrels this year, but not enough to reduce the stock to a point where it can be consumed in this country.

Samples of new pack 1924 canned strawberries have been received from Baltimore from D. E. Foote & Co., and the samples opened up nicely as to fill, syrup and handling.

Some Baltimore canners do not pack strawberries in enamel-lined cans, and are, therefore, at a disadvantage in competing with Michigan and Oregon canners who do pack in the enamel-lined ones, as buyers are under the impression that the enamel on the inside of the cans protects or holds the color of the berries, and prevents pinholing, but I have conversed with well-posted Baltimore canners a number of times, and they hold that the opposite is the result, and that, though the enamel-lined cans help hold the color for a while, yet that they increase the danger of pinholing and cause much loss and spoilage.

Canned corn of standard quality is pretty well cleaned up in the Central West. There are only a few cars in Ohio, only a few thousand cases in Iowa, and I understand that Wisconsin, Illinois and Indiana are all sold out. The new pack of canned corn will come in on a bare market.

There is nothing to say especially about canned peas, except that negotiations and transactions are now almost entirely confined to dealings between second-hand holders, as the canners have no stock worthy of mention.

News from the pea-planting districts in Wisconsin and elsewhere is to the effect that too much wet weather is delaying the planting and the sprouting of peas, and is almost sure to run the early crop into the period of the late crop canning, thereby causing confusion and inconvenience.

Tomatoes—It is reported that No. 2 canned tomatoes are about sold out in the East, which report may or may not be true. At least, there are indications that such is the case from the fact that the price on No. 2 canned tomatoes in Maryland and the East has advanced to $1.05 and $1.10 per dozen, f. o. b. canneries. There is some pressure apparently from the East to push the sale of No. 1 size canned tomatoes and No. 3 size, but No. 3s are not wanted, while No. 1s are selling very freely.

The exports for canned foods for 1924 for a period of 10 months ending May 1 show quite an increase not only in value, but still a larger increase in number of cases or volume. Prices were somewhat cheaper this year than in 1923, and the proportionate increase in quantity is greater than that in dollars and cents. Every item in canned foods has increased in export from the United States to every country in the world, except canned fruits. All vegetables, salmon, meats and milk have had a large increase in volume. The total increase in value of exports for 1924, as compared with 1923, is about five million dollars. The falling off on exports on canned fruits amounts to about that much, and this is accounted for, so I am told, by the fact that canners, in California especially, paid too much for the raw fruits and had to put their prices too high in 1923 beyond the ability of the foreign countries to buy and consumers to use.

This probably may be remedied, however, this season, as the canners are not paying so much for fresh fruit in California as they did last year, and I notice that 1 or 2 items on which tentative prices have been named are priced from 10 to 15 per cent lower than they were priced in 1923.

Altogether, the canned foods situation is somewhat satisfactory. The pack of 1923 is nearly sold out of everything, and the pack of 1924 has been largely sold ahead for future delivery, and it looks as if canners are destined to have a very profitable year providing they do not come to the conclusion that they must fight over the business and each contend for more than is his fair share of the sales. If they maintain their nerve and their prices, they will have a splendidly profitable season. Production is going to be good and the output large, but there is a demand and will be a further demand for all the canned foods that can be produced.

The fact that canned foods are being exported widely to all the other countries of the world is indicative of the fact that the market for canned foods in the United States is being expanded and enlarged, and that in a year or so canners in this country will not have to depend upon domestic consumption so greatly as they have in the past, but will have the wide, wide world for a market.

ST. LOUIS MARKET

Brokers Trying to Find Wanted Stock—Backward Season Beginning to Make Itself Felt—A Moderate Demand for Standard Corn—Tomatoes Are in Fair Call—Had Hoped for Early Deliveries on Peas—Asparagus Well Sold Up—Spinach Firm—Consumers' Taking Fruits.

St. Louis, May 29, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

THE Market—A quietness prevails in the canned foods market, but there are always turnovers, which is showing the general shortness of all 1923 pack spot goods. One reason why conditions are so quiet is owing to the fact that there is so little of a working stock. Brokers are daily trying to obtain items that some of their customers want, but which cannot be bought because their ideas of values cannot agree. There is more or less substituting going on to reduce the less desirable grades and sizes, as there is a tendency to go into the 1924 season with as little as possible on their shelves. Futures in various packs are being taken to some extent, but contract buying is less than normal, and as a rule is only to cover part of a dealer's needs, to obtain stocks for his own label. The backwardness of the packing season in many districts, because of continued rains and cool weather, will undoubtedly make itself felt in the 1923 pack shipments.

Corn—Corn is only taken when required and is not being given much attention. Fancy corn is not to be obtained except at a premium. There is only a moderate demand for standard.

Tomatoes—Spot tomatoes are having a fair call. Distributors are showing much indifference as to future Southern tomatoes. The prospects are that there will be more orders placed for future No. 2s than for No. 3s, because the former has sold better the past season. Gallons are easy and are not much in demand.

Peas—A firmness prevails in standard and fancy grade of peas. Others are closely held. Canners are much concerned on account of the backward and unfavorable growing season. They say it is about as it was last year, and yet in spite of this fact there was a record production. Southern advices indicate a backward start, and pea canners will probably begin to can late. The same condition exists in Wisconsin, according to reports received. Early deliveries from the South were wanted this season and extra prices were paid by some buyers. The shortage of spot peas and the demand for early deliveries will probably hurry the canners up so they can get their pack on the market as soon as possible.

Asparagus—Brokers of asparagus packers have been informed by the packers that they are well sold out of all popular grades and little surplus over contracts is expected. The quality is fine this year, it is stated.

Spinach—Southern spinach is firm at factory. There is only a fair volume of buying being done. California packers are through and packers are firm in price. There will be little left over after contracts are filled.

Miscellaneous—String and stringless beans and limas and succotash are having a fair call. Stocks are held close. Futures are attracting but little attention.

Fruits—More buying by consumers is reported, and this is causing an active market. Wholesalers are selling their already light stock and are replacing in a conservative way. Peaches are the firmest item, and prices on standard No. 2½s are going up, and indications point to a strong market for 1924 pack peaches. Old packs of peaches, apricots and pears are in good demand. Peaches are cleaning up rapidly. There is a little future business being done. Northeastern tree fruit and berry packers will not quote prices until they know the extent of the recent frost damage.

Milk—Condensed and evaporated milk are irregular in price. The demand is hand-to mouth, and is largely from domestic sources. The situation does not warrant a heavy make, and packs are being kept down by packers.

According to the Missouri Department of Agriculture, there will be a 10 per cent increase in minor crops this year, such as strawberries, watermelons and canning tomatoes. The 1924 crops are valued at $6,600,000.

The estimate of the strawberry crop in the Arkansas-Missouri district along the Frisco Railroad, made by the Frisco Agricultural Department, is 1,020 cars. This compares with 1,417 cars last year and 1914 in 1922. For the movement of this crop the railroad company inaugurated on May 1 what it terms "The Strawberry Special," a daily fast service of through refrigerator cars, the running time of which from Monett, Mo., to St. Louis is 16½ hours. These trains arrive in St. Louis at 10:30 P. M., and after being re-iced are forwarded to the market center previously ascertained to be best for a particular shipment.

CALIFORNIA MARKET

Opening Prices on Fruits May Be Late—But Little Buying of Canning Stocks as Yet—Buying Cherries Quite Well—Asparagus Yield and Pack Satisfactory—Spinach Pack Below 1923—The prices for Pears—Increased Business to Cuba Is Looked For—Notes.

San Francisco, May 29, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

PRICES May Be Late—The trade is showing considerable interest in what the probable opening prices on California fruits will be, but it would occasion no surprise if these were not announced until the packing of apricots is under way, some time in June or even July. Some purchases of canning stocks have been made, but these have not been large and operations along this line have not been general enough to enable packers to figure definitely on costs. The tentative opening prices on cherries, named on May 10 by the California Packing Corporation, have started business off on this line and sales have been quite satisfactory. These prices are well below those of 1923, and being guaranteed against the formal opening list, when named, are meeting with general approval. Apricots are now making their appearance in the fresh fruit markets, plums will soon become plentiful, and it will be but a comparatively short time until packing operations will be under way in this State.

Asparagus—The output of canned asparagus is proving quite satisfactory despite the lack of rain, and a pack larger than that of last year is promised. Cool weather is being experienced and this will undoubtedly lengthen the season. Canners have secured a larger proportion of the crop than usual, but there promises to be little of the pack unsold by the time canning is at an end; at least of the grades mostly in demand.

Spinach—The canning of spinach has come to a definite end and the outlook is that the pack will be in the neighborhood of one million cases. This is well below that of last year which set a new record, but is larger than seemed likely when the packing season commenced. The prospects of a lighter output resulted in quite a volume of early business and well informed operators declare that practically everything that has been packed has already been disposed of. A few canners have some stock to offer, while others are oversold. Considerable of the acreage devoted to spinach failed to produce a crop, owing to the drought.

Duty on Sugar—California canners are much interested in the announcement that Great Britain has made a reduction on the duty on sugar. The duty has been reduced in such a way that products in which canners use sugar in the process of manufacture will be affected. The change goes into effect the first of July and is a reducton from two and three-quarters pence a pound to one and one-quarter pence. A splendid export business from California to the United Kingdom has been done of late and this is expected to show a marked gain when the new ruling becomes effective.

Pears—The California Pear Growers' Association, which controls a considerable portion of the acreage in this State, has named prices on the 1924 crop, which will commence to move about the middle of July. Prices on No. 1 canning pears will be $55 a ton to canners and $52.50 net to growers while No. 2 pears will be delivered to canners at $31.50 a ton, and for these growers will receive $30. This organization is taking a firm stand for the production of high-grade fruit and is doing much effective publicity work to increase the consumption of this fruit in its fresh, dried and canned forms. Last year the opening prices of growers were $50 for No. 1 pears and $30 for No. 2, but much of the stock purchased by canners later on was on the basis of $35 for No. 1 and $25 for No. 2. Shipments of fruit to the fresh fruit markets netted growers good returns and quantities were disposed of through this channel. Canners anticipated paying higher prices this year than in 1923, but it remains to be seen whether they consider the payment of $55 a ton practical or not.

Exports to Cuba—San Francisco business men have been making a special study of the possibilities of greatly increasing the volume of exports to Cuba and it is believed that quantities of canned foods can be disposed of in that country if properly featured. It is estimated that approximately seventy-five per cent of the canned fruit consumed in Cuba passes through the port of San Francisco, so that the real problem is to bring about a heavier consumption rather than a greater share of the business already developed. Canned pears and canned peaches enjoy a much greater sale than any other fruits. There are now frequent sailings from San Francisco to Havana and shippers are enabled to lay down their goods at that port within twenty-one to thirty-one days. Local business men have received many inquiries from Cuban firms of late seeking to form connections and an immediate increase in export business is expected.

Coast Notes—Prof. E. J. Lea, for years director of the Pure Food and Drugs Laboratory of the California State Board of Health, and well known to canners throughout the State, has tendered his resignation. No successor has been named as yet, but his duties are being cared for by Walter M. Dickie, secretary and executive officer of the board. Prof. Lea has worked hard to uphold the standards of food products in this State and his work in connection with canned tomatoes and tomato products is particularly noteworthy.

Under the direction of Walter G. Mathewson, California State Labor Commissioner, an investigation of labor conditions in the asparagus growing and packing districts of the State has been completed and he announces that there is no child labor employed. The labor bureau is preparing to continue its investigation to cover every important vegetable and fruit crop in the State.

The Irvine Company has leased property at 381 Fifth Street, Oakland, Cal., and will engage in the handling of canned fruit lines in a jobbing capacity, as well as in the manufacture of flavoring extracts.

The annual picnic of the employes of the California Packing Corporation was held at the Mt. Diablo Country Club, near San Francisco, on May 21. The offices of this concern were closed for the day to enable all to attend the outdoor gathering.

What Canned Foods Distributors are Doing

National Wholesale Grocers' Association Met in Chicago Last Week—Reports Relations With Canners Excellent—Observers Sees Psychological Force In Present Curtailed Buying in Grocery Field.

The Grocers' Convention—With an indicated attendance of well over 2,000 wholesale grocers, manufacturers, canners and brokers, the annual convention of the National Wholesale Grocers' Association was held in Chicago this week, headquarters being maintained at the Congress Hotel.

The program for the convention this year eliminated much of the old long-drawn-out formal convention routine, and there was more of a tendency on the part of the jobbers to get down to fundamentals this year.

The ever-present problem of specialty sales work again came up for discussion, and there was a tendency on the part of the jobbers to declare openly that they were more in favor of marketing of their private brands and that they resented many of the practices of the specialty salesmen. The discussion around the convention hotel lobby was in line with talk heard by jobbers attending the specialty manufacturers' convention in Minneapolis last September—in brief, that the specialty manufacturers are not giving the wholesale grocers adequate profits on their lines, and that, therefore, the wholesale grocer is forced to concentrate more strongly on his house brands.

Differences between canners and wholesale grocers have been ironed out successfully, the report of the canners' conference committee indicated, although there are still a few minor difficulties to be settled. With the American Wholesale Grocers' Association having shown the same conciliatory spirit in its dealings with the canners, it appears that the various squalls which have upset the tranquility of the wholesale grocer-canner relations during the past several years are now at an end, for the time being, at least.

In its report the arbitration committee reported 57 controversies settled during 1923. Of these, 51 were on canned foods, on dried fruits. In the decisions, 34 favored the buyer, and 3 were in favor of the seller.

Several meetings of allied associations were held in Chicago during the week. The Illinois Wholesale Grocers' Association held a one-day meeting here, the National Food Brokers' Association held an informal gathering, the American Specialty Manufacturers' Association had a luncheon, and the canners' conference committee also met here during the week. The Canned Foods Week committees of the jobbers and canners also conferred informally during the week.

Arbitration—Wholesale grocers in all parts of the country have lined up in support of H. R. 646 and Senate 1005, two bills designed to provide for the adjustment of commercial disputes by arbitration.

Use of American Flag or Emblem—No doubt it is already understood by wholesale grocers and other business men that under the laws of many of the States it is forbidden to use the American flag or emblem in connection with labels or with advertising matter of any kind. A new and somewhat different question seems now to be presented. The National Wholesale Grocers' Association has been asked whether it is proper to offer or deliver an American flag as a premium in connection with the sale of any merchandise. There is no Federal law dealing with the use of the flag in this way, but merchants contemplating such use are advised to first consult their own attorneys and the statutes of their respective States.

Moving to Washington—The American Wholesale Grocers' Association will remove its headquarters to Washington, D. C., on July 1. Commenting on the change, J. H. McLaurin, president of the Association, says: "In this change of the Association's headquarters will be recognized another forward movement whereby the American Association will be offered opportunity for a greatly increased service to the food interests of the country.

The H. A. Marr Grocery Co., wholesale grocers, of Salt Lake City, have purchased the business of the Murphy Wholesale Grocery Co., of Ogden, Utah. It is reported that the consideration involved was $100,000.

Adjusting Spoilage Claims—The American Wholesale Grocers' Association, in a current bulletin, says: "We have found occasion during the past few weeks to engage in some interesting and pleasant correspondence with the Holmes Company of

Robbinston, Me., concerning spoils and swells on sardines. Following such correspondence we are now in position to state that if those wholesale grocers who have been having trouble in the way of spoils and swells on sardines bought from the Holmes Company of Robbinston, Me., will make out bills against that company for the spoils and swells on hand and send to this office to be forwarded to the Holmes Company, we have assurance that such bills will be promptly adjusted."

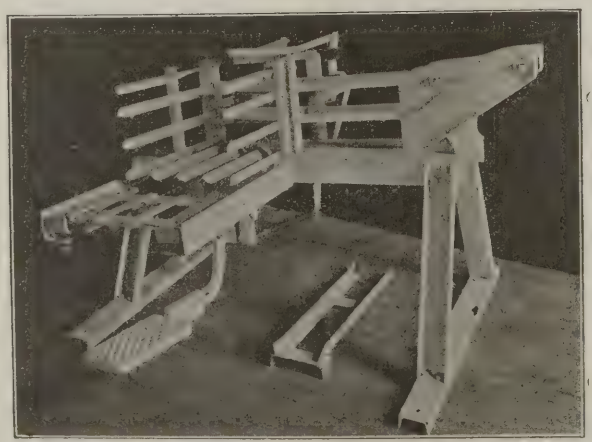
Now General Superintendent—M. H. Hedrick has been appointed general superintendent of the Economy Stores, Inc., Connecticut chain store grocers. Mr. Hedrick, who has been serving as buyer at the Waterbury headquarters of the company, was formerly in the New York brokerage field, and was for a time a buyer for R. C. Williams & Co.

Adams Leaves Association—E. L. Adams, secretary of the American Wholesale Grocers' Association for the past six years, has resigned his position, effective June 1st. Mr. Adams is entering the chain store grocery business for himself at Jacksonville, Fla.

Salmon Bill Amended—Wholesale grocers join with the salmon canners in rejoicing over the action of the Senate in modifying the Alaska salmon fisheries bill, to meet some of the objections advanced by the canners, and to make the law less stringent. Of particular importance is the change which will permit the Secretary of Commerce to advance by not more than 12 hours the opening and closing period applying to salmon fishing each week. The bill in its original form provided for a 36-hour closed period from 6 o'clock Saurday evening until 6 o'clock Monday morning each week.

Psychology and Groceries—Considerable discussion is heard in grocery circles over the present curtailed buying policy of the jobbers. One well-posted observer, commenting on this situation, has the following interesting comment to make: "A suspicion of autosuggestion arises, a conclusion that many business men have become obsessed with the thought that a slump is inevitable and have assumed that a period of depression already exists. There seem to be too many buyers as ready now to quit because the rapid progress of the past year has not been universally maintained as they were reluctant to believe some two years ago that progress was at all possible. There is now, within the United States, the greatest financial strength, the richest offering or resources, the largest potential consuming capacity that this or any other country has ever known. Analysis and investigation indicate that inventory stocks in the hands of distributors are in very few cases excessive; in fact, they are in most cases quite low because of the growing practice of avoiding the "freezing" of capital by accumulating unnecessary reserves and of eliminating the speculative factor of long forward commitments, outside of the usual future canned foods purchases. It is true, to an extent, that production in certain lines has become rather large, but this is not general. The buying power of the consumer, however, has not been impaired, so that there is no sound economic reason why the volume of trade in general should not continue on the basis of the volume experienced last year, at least. The fact that there has been a falling off in the past six weeks or so forces the conclusion that business psychology has become influenced by a malignant complex. Some reason for the disturbing state of mind which obtains in the trade just now is to be found in the uncertainty of the political situation. This is not a matter of the approaching national conventions and presidential campaign. It arises in the exhibition of "practical politics" now being staged in Washington. Politicians must have their posturing. Business men have no remedy after the fact of election. They do have a potential preventive, however. But it will avail them nothing so long as the politicians are elected to office by politicians. Officeholders, in practice, owe their first allegiance to those who put them in office, and a play of politics is the tribute most appreciated by the politician electorate. If business men want a business administration of public office—and the Lord knows it is sorely needed—they must elect the officeholders. There is no question that fundamental economic conditions are the most important determining factors in business. But they are not alone; if they were, business would be excellent today. Daily bank clearings this month have averaged some $81,000,000 above those in May, 1923. Governmental figures show that the wholesale prices of farm products (a really fundamental factor of trade) are but two points lower than they were a year ago, compared with a drop of 11 points for all commodities. Industry is encouragingly free from labor troubles. The present state of trade is fundamentally secure. Why should it be psychologically unsound? The man who lets go is the man who slips. In his falling he carries down with him many others whose grip on their business is not so firm as it should be, because they, too, are psychologically wavering. A few more slipping, a few more being carried down, and business will have lost all that it has gained since 1920. It will have to recover again—first, the will to go forward; then, the ground which it has lost. Is that a cheerful outlook? Does it justify persistence in pessimistic psychology? It should spur everyone in the industry to redoubled efforts to hold what has been gained; to go forward."

SH-H-H!



An old lady of a somewhat rustic appearance bustled up to an express clerk in New York and laid down a package for shipment.

"What does it contain, madam?" he asked.

"Do you have to know that?" she inquired tremulously.

"It's customary."

"W-w-ell, I'll tell you then, but I'd like for you to keep it a secret, as it's a surprise for my son."

The KYLER Boxer

We're Ready to be Judged by What Users Say about KYLER Boxers.

See the KYLER Boxer in operation - we sell them by the way they perform in factories like yours. Ask any KYLER Boxer owner anywhere; ask his superintendent, his operator.

Ask any man in a position to know about KYLER Boxers performance. What these users tell you, we will abide by. A pretty fair barometer by which to choose your next Boxer. May we send you more details?

SMILE AWHILE

FISHERMAN'S LUCK

I fished for several hours;
In fact, I fished all day,
Until the night came stealing
Across the gleaming bay,

And yet, despite my patience,
Thus candor bids me tell,
I didn't catch a thing until
I reached home and caught
(finish it for yourself.)

—E. D. K.

TAKING NO CHANCES

Click—I never knew such a fussy man.
Clack—What's he done now?
Click—He sold his plot in the cemetery because they buried a man who died of a contagious disease too near it.

THE INSULTING THING!

She—What are you thinking about?
He—The same as you.
She—Sir!

HOORAY!

Daughter—Yes, mother. I hear that just because I broke our engagement he has started drinking.
Mother—The brute! Openly celebrating!

DOING HIS BIT

Lecturer—What have any of you done to save our timber?
Voice from Rear—I shot a woodpecker once.—Punch Bowl.

TOO MUCH FOR HIM

Smith—How do you destroy the evidence around your place?
Jones—I keep a goat and he eats all the empty bottles.
"Good idea, but don't they disagree with him?"
"No, but he was terribly sick the other day. I left a little in one of the bottles by mistake."

WISE GUYS

Mike—Oh, yes! Tell 'em all you know; it won't take long.
Ike—I'll tell 'em all we both know; it won't take any longer.—Sigma Kappa Triangle.

Victim—Wow, that razor does pull!
Barber—Oh, that's all right. I'll get the whiskers off if the handle doesn't break.—Pelican.

FLASHY

First Lightning Bug—Bill Firefly got run in last night.
Second Lightning Bug—Was he full of shine?
First—No. The cop got him for not having his tail light burning.

AT THE BALL

Lightly-garbed Maid—And you say you object to my costume?
John Law (at door)—Not personally, ma'am, only professionally.—Phoenix.

POOR MAN

Josie—He said he'd drown himself if I refused to marry him.
James—So he's between the devil and the deep sea.—London Opinion.

PROBABLY GOING TO YELL

Sheem—"What are your habits at night?"
Heem—"Pajamas!"

EDITORIALS

BUYER WANTS SECONDS OR WORSE—"What have you to offer in seconds or worse, just so that the cans are clean?" That inquiry was made of one of Baltimore's old canners by a brokerage firm of good standing, and the canner became indignant, and wouldn't you? If you would not you are a poor specimen of a canner and ought not to be in the business of producing foods for human consumption. We have heard the old excuse—and it is and has nothing but an excuse—that the retailers must have some cheap goods; they have a trade for it. And so they do, but they do not mean trash, "just so the cans are clean;" they mean that part of every food crop which has ripened too far for the prime grades, or in some manner falls short of the finer food qualities which every article put into cans should have or not be touched for canning, but which is good food, and they do not mean trash. The tough parts of the beef are not to the liking of the dilitante diner, but they are, nevertheless, good food; the too ripe pears or peaches do not produce the kind of fruit in the can, in appearance, that the jobbers demand, though they are the best flavored and most tasty of all; there are peas which have grown large and mellow and meaty and contain more food value than the halfgrown, immature, though extremely tender ones, and it is such foods that should be put into what are understood by "cheap goods" when the buyer wants something to meet the demands of the families who must make every penny count, and therefore are first of all able to be cheated. The man who packs stuff that should not be used and then tries to palm it off for other than it is is a contemptible cheat, only exceeded if possible by the broker who helps find a market for it, and by the wholesaler who buys it. If the canners of the country had the right conception of their calling they would never permit such goods to go out in cans; they would never permit it to become known that such goods are canned, because that fact must inevitably reflect upon all canned foods. They tell the world, during Canned Foods Week and at other times, that only fine, fresh, wholesome fruits, vegetables, meats, etc., are allowed to enter the cans—and then a wholesale grocer seeks the kind of trash this wholesaler is seeking, through this reputable broker! You will find the letter of the broker to the canner, and the canner's answer elsewhere in this issue. We would like to hear what you have to say of such a thing.

We talked with this canner, and he was indignant with his broker that such an offer should have been made him. And let us say here, that the offer came from out of town. We know the broker and we regard him highly, and cannot any more understand his attempting to fill such an order, instead of flinging it back in the face of the wholesaler, than can the canner. And so we are not naming this broker nor his residence. The names are not of such great importance; it is the incident we wish to emphasize, and, if it is a practice, to scotch this practice.

There is possibly in this an insight into human nature that is not very inspiring, to say the least. There are canners so short sighted, and so forgetful of the good of their entire business, that they cannot bear to throw away the culls and discards which inevitably come in the products delivered them under contract or in buying; or can it be that they are so greedy for the small penny in sight that they will endanger the loss of their entire business, for the sake of the few cents that would be saved by using these products which should go into the waste pile? No grower of any crop ever expects to gather all of it in prime condition; there must always be some waste and inferior stuff—that is any grower, apparently, except some tomato growers, whom we have seen bring under contract to the canner the very scrapings of their fields. Possibly the canner who tries to use it all is this same grower graduated to the business of canning. And then there are brokers, who, for the sake of the insignificant commission they will make on the sale of this unfit stuff, will try to sell it; and, in turn, a wholesale grocer, so remiss to his duty to the consuming public as to pass it on to the retailer, and again a retailer who will cheat these poorest of his customers, who least of all can afford to spend their hard earned money and not get full value. It does not make a very pleasant consideration, and we trust that any canner who receives such a request as this will follow the example of this Baltimore canner,

and fling the letter back in the face of the one who tenders it—with appropriate trimmings.

MORE PLEASING THOUGHTS—That deduction of 25% in taxes, and deductible from this year's Income Tax bills, must feel quite comfortable to the many lucky canners who have such taxes to pay. It is said Wall Street rejoices because it sees in this about $100,000,000 which may find its way to that street; but we rather think that business men will see in it a slight relief and a further opportunity to get just that many more small bills paid and out of the way—among them, for instance, the little subscription bills we recently sent out.

* * *

And even in our own industry there has come another saving of 25 per cent. You will note the Board of Directors of the National Canners Association, at their meeting in Chicago last week, and reported in this issue, reduced the dues 25 per cent., and now want but 3/8 of a cent per case where the dues were one-half cent per case heretofore. This comes from the increased membership, and is in line with the desire and hard drive of the last president of this association, "Jimmie' Anderson, who contended that as the association was in fine fettle, they could reduce the dues by increasing the membership. President Clark has been in whole-hearted sympathy with this, and has labored hard and long, and been able to bring to fruition, as we see, the claim first made. They now have approximately 600 members, and if the good work can be kept up, as it should be, they can still further reduce the dues by increasing the number of members. Thus a canner can help himself by becoming a member of this big and aggressive and progressive association, as he should be, and help fellow members at the same time by reducing the dues. There are "helps" which this association furnishes it members which are not written in these pages. A word to the wise.

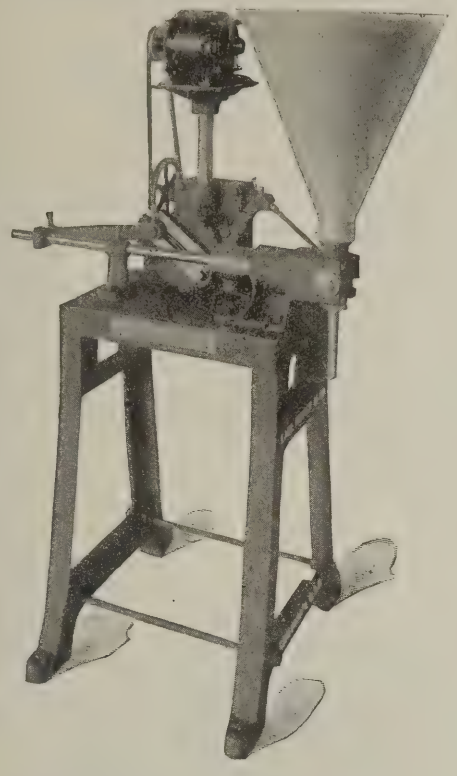
* * *

And we notice that the courts at Washington have granted the appeal of the California canners who asked for a re-opening of the Concent Decree, and that this whole matter of the big meat packers dealing in canned foods will be aired again, and we venture to predict with entirely different results from the last time. If these big buyers, but particularly good distributors, of canned foods are again added to the list of customers of the canners, it will mean a new day for canned foods consumption. Remember that the main complaint against these big meat packers was that they were too good distributors; that they used their tremendous facilities for rapid and intense distribution, to the detriment of the wholesale grocers and their limited, and too often mossgrown, methods of distribution. The valiant knights of the benighted wholesale grocers arose in the Senate of the United States and claimed that these big meat packers were too efficient and therefore they must be destroyed. And they tried to destroy them. But it was too unnatural, too un-American to punish efficiency in this way and it could not last. And now the decree will be relegated to the dump where it belongs.

> "You can fool some of the people all the the time; you can fool all of the people sometimes, but you cannot fool all of the people all the time.'"

And yet another cause for rejoicing may be found in the fact that the greatest fiasco ever attempted by our Government has been narrowly averted. The daily papers assure us that there is no chance to pass the McNary-Haugen Farm Relief Bill or a substitute for it, and the country is spared this capital mistake. When our Government begins to guarantee or to stand behind any business, whether that be farming or making shoes, or anything else, then every other line of business would have the right to demand equal support and protection, and we would soon have rampant socialism in its worst form. It would mean the end of individual effort or initiative; a mere laying down on the Government for support.

THE NEW TAX LAW AND THE BROKERS.



By Paul Fishback, National Food Brokers Association.

THE daily press reports that the Revenue Bill, agreed to by the Conference Committee and passed by the Senate and House of Representatives, was signed by President Coolidge and has become a law.

Aside from the general relief from oppressive taxation on all business, our members have two special reasons for gratification for the provisions of the new law.

The first is the great saving to every food broker by the elimination of the war time tax on telephone and telegraph messages. The provisions of the 1921 Revenue Act, which taxed rapid communication, were omitted from the bill submitted by Secretary of the Treasury Mellon, left out of the bill by the House of Representatives, put back in by the Senate Finance Committee, voted out again on the floor of the Senate by amendment, and the amendment approved by the Conference Committee. Since 1918 15% of your long-distance telephone and telegraph bills has been tax. The total has been a tremendous amount collected from the members of this Association alone, Treasury Department estimates showing that approximately $34,000,000 annually was collected from all business through this tax. In accomplishing the repeal of this item of taxation the Association was co-operating with about 250 trade associations of business men.

The second relief to food brokers was the specific exemption of "brokers exclusively negotiating purchases or sales of produce or merchandise" from that section of the bill which assesses an occupational tax of $50 per year on all brokers. This provision becomes effective July 1, 1924, which means that the occupational tax need not be paid this year. The saving of this tax, which seemed to rankle our members more than all other items of taxation, is for this and future years, but is not retroactive. Those who have paid the tax in the past cannot expect to get a refund, as under previous laws brokers selling produce and merchandise were subject to the tax. One reason this tax was so distasteful to our members was that it was not equitably administered. Some brokers successfully set up the claim that they were manufacturers' agents and were exempted from payment of the tax, although their businesses and methods were identical with those of others who were classed as brokers and compelled to pay the tax. The tax is out now. Your Association will endeavor to keep it out for all time.

Mono - Piston Filling Machine

for Mustard - Salad Dressing, Mayonnaise, etc.

A wonderful little machine that admirably fulfills the need for a satisfactory filler, of moderate price, for the above products.

It fills a solid pack from the bottom up.

Quickly adjusted for different size containers and readily cleaned for different products.

It is a precision filler of minute accuracy and this accuracy is *permanent* regardless of wear.

Made of monel metal.

Write for full details.

N. C. A. Board of Directors Meets

Hold Memorable Session in Chicago—Dues Reduced to ⅜ of one cent —Membership Growing.

THE National Canners Association at the Buffalo Convention presented to its membership a most creditable statement, showing the Association to be in sound, healthy, growing condition. It is needless to emphasize the success of the Buffalo Convention, but there was a sentiment freely expressed there that every possible effort should be made to increase the membership of the Association and thereby lower its annual dues.

Immediately after the convention, President Clark appointed a special committee on membership, and has devoted practically all of his own time and attention to the inauguration of what has amounted to a personal canvas among non-members to induce them to become supporters of the Association. Today the Association has 599 members—an increase of 72 since the Buffalo Convention. In that time it has lost 20 members, 4 on account of discontinuance of business and 16 for various reasons, largely financial. This loss of 20 members would not aggregate more than 125,000 cases total.

As is well known, the membership dues are based on the previous year's output of each member. In some lines there was a short pack in 1923, and this cut down the total output of the membership very close to 50 million cases for 1923; 46,350,316 cases of seasonal products and 6,757,787 cases of non-seasonal products, making the present membership output total 53,108,103 cases. These are rock bottom figures and the Association is optimistic enough to feel that there is a chance during the next few months to increase the membership to substantially larger figures.

It will be remembered that the principal topic of discussion at the convention was the negotiations which were then pending between the canners Conference Committee and the distributors committees representing the National Wholesale Grocers' Association, the American Wholesale Grocers' Association, and the National Chain Store Grocers' Association. Subsequent to the convention these committees held two meetings, one formal and one informal. The formal meeting was held in New York City on February 16th, 1924. This was the first time that all three of the distributors' organizations formally sat in conference with representatives of the National Canners' Association. While every State organization had endorsed what is known as the warehouse plan of handling swells as being good, sound business, it was found in practice that some canners and distributors indicated a desire for a cash allowance in lieu of a full guarantee of canners for all spoilage losses. To meet these conditions a temporary agreement was finally and unanimously reached which gave buyer and seller the option of either plan.

The members of the N. C. A. have received copies of the recommendations which were unanimously agreed to that day and it is not necessary to incorporate the same in this report. It should be borne in mind, however, that the National Canners Association has an organization at the command of its membership to be used in the identification and destruction of all spoiled canned foods when requested by the canner to render such service. Should any canners wish to avail themselves of this plan, they will find the details fully outlined in Bulletin 94-A.

It will be recalled that the Association of State and National Dairy and Food Commissioners appointed a committee to look into this plan from the standpoint of law enforcement, both National and State. This committee made a report to the Executive Committee of that Association. After full consideration of the matter the Executive Committee of the food officials have recommended that the plan be given a "thorough and fair trial" as applied to goods in wholesalers' hands, in order to facilitate removal of spoiled foods from channels of trade and insure their proper disposition; also, to give the canning industry an opportunity to study causes of spoilage and, if possible, to overcome them, and permit proper identification of the product.

The committee urges frequent destruction of swells in retailers' hands and proper coding of all canned foods.

It is presumed that no official action will be taken on this report of the Executive Committee of the Association of National and State Dairy and Food Officials until their convention next August.

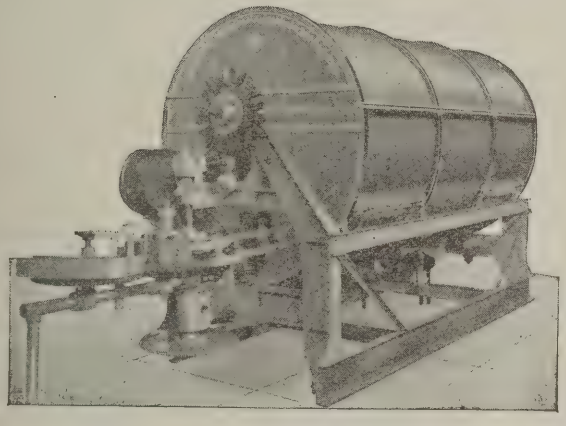
The Secretary has just returned from a trip to California, where the Association has a strong representative membership. Nearly all the members of the Association were visited personally and several meetings were held at which topics of interest to the industry were discussed.

It is pleasing to note that the Association still retains the interest and practically unanimous membership of canners of the staple foods produced in the State of California.

The investigation of alleged poisoning cases shows a steady increase. Up to May 24th the total number of cases handled since the Buffalo Convention is 74, as compared with 59 for the same period in 1923. These cases are classified as follows:

Fruits	11
Vegetables	34
Sea Foods	15
Soups and Condiments	8
Meat Products	2
Milk	2
Plum Pudding	1
Unidentified	1
Total	74

During this same period there have been suits filed in 11 cases. It is not necessary to state the outcome of the investigation of these cases because it is the old, old story.



There have been some 35 or 40 letters written relative to correcting the literature on canned foods, 18 of

these being written to various newspapers which published incorrect information and misleading statements regarding the Albany, Oregon, outbreak.

Perforations in Canned Fruits and Vitamins in Canned Foods—The studies relating to perforations conducted prior to 1923 were only partially effective and are to be regarded as preliminary. During the last year the research laboratory has made fundamental discoveries and has demonstrated in what manner perforations can be practically avoided in canned apples.

Substantial progress has also been made in overcoming perforations in other fruits.

The identity of some of the substances causing perforations has been determined, and it is believed that by following the same line of study the identity of all perforating substances will be determined. In this way much of the perforation that has been experienced from canned fruits can be overcome. If any perforating substances exist whose influence cannot be overcome, the extent to which they may cause perforations can probably be determined.

The study of perforations is connected with the study of vitamins, because the same substances which cause the perforation of the plate exert a disturbing influence on the anti-scorbutic vitamin in processing canned fruits. Adverse criticism of canned foods based on the belief that they do not contain vitamins has been as harmful as the fear of food poisoning.

The results that have already been announced from the study of the vitamin content of apples, cabbage, and spinach warrant us in believing that a study of other products will help to give canned foods a reputation that could be obtained in no other way. In addition to being of technological value, the vitamin investigations offer great possibilities in the way of publicity. These two investigations are among the most valuable which the research laboratory has undertaken.

Corn Black—A circular has been published giving several special lacquers which have been developed by the laboratory and have been found in large experimental packs to prevent the formation of corn black, when applied to the ends of the can. It is hoped that the question of applying these lacquers in the manufacture of cans will be studied by the can makers.

The Association is continuing its cordial relations with many of the newspapers of the country, which have expressed a desire to have useful information regarding canned foods. A special service known as "Canned Foods Pointers" is being sent to a large list of newspapers and is being generously used, not at all times in the form in which it is mailed from this office, but after being re-arranged to suit the needs of the different editors.

The Haskin Recipe Books have always been popular and this popularity seems to be on the increase. It has just become necessary to print another edition to supply the demands of Mr. Haskins' clientage.

The splendid address of Sir William Willcox on the safety of canned foods has been generally circulated through the Associations representing the different distributors. The 12,000 copies of the address originally printed have been exhausted and there is a demand now for thousands of copies more. The Finance Committee will be asked for authority to have these additional copies printed, for this address is one of the best pieces of impressive publicity that has been issued.

The Finance Committee has authorized the establishment of what is known as a Domestic Science Division of the Association. It is proposed to put a competent person in charge of this division whose duty it will be to get in touch with the different Federations of Women's Clubs, Parent-Teachers' Associations, American Association of University Women, Public Health Nursing Association, and many other institutions of a similar kind. The program is broad and comprehensive and thus will afford an excellent opportunity to bring home to the thinking consumers of this country the valuable research work done under the direction of the National Canners Association.

Coding—Attention has been repeatedly called to the necessity for canners to code their products. This has been encouraged in every possible way, and, while many have accepted the suggestion, there are still some who have not thought it necessary. Many favorable reasons for universal coding have been brought to the attention of the canning industry and it is hoped that before long coding will be the general custom.

One of the important elements of cost to the canner is freight rates, which have been increased from time to time to meet the demands of the railroad companies. As a rule there has been but little resistance to these increases, but recent action by the official classification committee to raise canned foods to a much higher class than that in which they are now shipped, has been met with the earnest resistance of the Traffic Committee of the Association. General objections to this action have been filed by Mr. E. S. DePass, chairman of the committee, and the whole case is being put in shape to come before the Interstate Commerce Commission at the proper time.

The Pea and Corn Sections of the Association held meetings in Chicago at the time of the convention of the Western Canners Association. Both of these meetings were well attended and the officers are encouraged to hold subsequent meetings for the discussion of live topics that confront the canners of these products. The Pea Section adopted pea standards which had been corrected to meet certain objections that had been made to previous efforts. The final recommendations have been presented to the committee on definitions and standards for approval.

The Corn Section has made commendable progress in the way of establishing standards and it is hoped that before long its officers will be in position to make definite recommendations.

The Ketchup Section, or what will probably be known as the Tomato Products Section, held a meeting in Chicago on April 21st, for the purpose of reorganization. Great interest was taken in this meeting, nearly every large manufacturer being either present or represented. This promises to be one of the important sections of the Association.

The Canned Foods Week that has just been concluded was the most successful that ever has been held. While manufacturers or growers of other commodities have tried these weeks, as a rule they have been unsuccessful, but each year the canning industry has found that its efforts have been met with greater and greater results. These efforts should be greatly broadened and intensified for the coming year. The results will justify practically any amount of money and effort that the canners and distributors can put in it.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

SUCCESSORS TO
GEO. W. ZASTROW

Since his election President Clark has devoted a large part of his time and interest toward the betterment of the N. C. A. He has been to the Washington office several times and has studied the work of the Association thoroughly. He delivered numerous addresses before and during Canned Foods Week, and has addressed meetings of the Western Canners Association and the Indiana Canners Association. He also made an address before the American Wholesale Grocers Association at Dallas, Texas, and will speak before the National Wholesale Grocers Association in Chicago this week.

The bulletin issued by the Association on Canned Fruits has met with popular favor. Fruit canners are sending in for large numbers of additional copies to distribute throughout the trade.

There has just been issued a popular bulletin on tomatoes and tomato products, and it is being distributed at the present time.

The revision of "Canning and How to Use Canned Foods" is well under way and this revised publication will soon be ready for distribution.

Bureau of Raw Products Research.

JANUARY TO MAY, 1924.

May 24, 1924.

The increasing attention being accorded canning crops by State and Federal research organizations shows that the Association's Bureau is developing effective co-operation with these institutions.

Since the convention in January the agricultural research work on canning crops in progress in New York, Michigan, Ohio, Indiana, Illinois and Wisconsin has been reviewed and the activities of the coming season discussed in detail with the individuals in charge of the numerous lines of work.

Meeting the increasing number of requests for assistance and information from individual member canners has also been an important part of the routine work.

The canning crops work in these Middle Western States has been increased very materially through the activities of the Raw Products Bureau. For the season of 1924 it includes a large number of investigations having for their particular purpose the improvement of the quality of canning crops and reduction in the hazards of growing.

Dry Bean Standards.

At a conference in Chicago in April, a Department of Agriculture representative explained to a number of bean canners the interest of the department in working out Federal standards for dry beans. Keen interest was expressed by canners, and the Raw Products Bureau, together with the Bean Section of the National Canners Association and a committee appointed by the manufacturers of tomato products, was asked to ascertain the sentiment of the industry as to the desirability of the proposed undertaking.

Information Service on Publications.

As a matter of additional service to member canners, publications of special importance on raw products research have been listed in a series of supplements to the Weekly News Letters. These have included peas, tomatoes, raspberries and strawberries.

1924 Crop Season.

At the suggestion of a number of canners, it is planned to give special attention during the summer to a study of the conditions surrounding the growing of seed peas in the West. Following this it is proposed to renew and develop contracts which have been made with the Experiment Stations in Utah, the Northwest and California, and spend time in the field with the investigators in charge of a number of important projects having to do with the improvement of peaches, cherries, small fruits, asparagus, spinach, tomatoes and other products for canning on the Pacific Coast.

ROBERT A. SINDALL, *President-Treasurer*

HARRY R. STANSBURY, *Vice-President*

THE MEETING IN DETAIL.

The Board of Directors of the National Canners Association met at the LaSalle Hotel, Chicago, on Wednesday morning, May 28th. Present:

R. F. Clark, President;

E. F. Trego, Vice-President,

and the following directors:

James A. Anderson, L. S. Argall, George L. Bacon, John L. Baxter, Henry B. Bird, Royal F. Clark, L. L. Brotherton, C. O. Dawson, George E. Diament, Richard A. Gillian, H. H. Hankins, F. A. Harding, Roy W. Hemingway, H. L. Herrington, J. W. Hutchinson, E. H. Kennedy, H. E. MacConaughey, William McEwing, Laurence Meulendyke, John S. Mitchell, W. R. Roach, W. F. Rudiger, C. H. Sears, John S. Souder, D. H. Stevenson, W. B. Stokely, Jr., Harry P. Strasbaugh, Wm H. Taylor, Clarence L. Turmail, W. W. Wilder, Charles A. Yunker.

Verbal resignations were received from R. M. Barthold, Philip Larmon and E. E. Chase. In their places were chosen L. A. Woolans, E. G. McDougall and Ellsworth Chase.

The resignation of W. A. Miskimen as director was accepted with regret. Robert Dickinson, of Illinois, was elected to fill the vacancy.

Roy Nelson was elected to fill the vacancy in the directorship from Missouri.

President Clark, in a feeling manner, called attention to the death of former President Geo. N. Numsen. Short addresses were made by former Presidents Roach and Strasbaugh. The Board of Directors, at the request of President Clark, stood in silence in memory of the deceased. The Secretary was directed to write Mrs. Numsen a letter expressing the deep sympathy of the board.

President Clark made a verbal report of the work of the Association since the Buffalo convention, calling especial attention to the campaign for increased membership.

President Clark also made a report of the financial condition of the Association and the budget which had been adopted by the Finance and Executive Committees. He also called attention to recommendation of these committees that the dues be fixed at three-eighths of a cent per yar for 1924.

On motion of L. A. Woolams, the Board of Directors unanimously voted to make the dues for 1924 eighths of a cent per year for 1924.

There was a general discussion on membership solicitation by the Board of Directors. The Secretary was requested to prepare in a brief manner a memorandum showing just exactly what the members get in return for their membership dues.

Mr. R. F. Clark, chairman of the Canned Foods Week Committee, made a report stating that the 1924 effort was a decided success, and outlined a campaign for the next Canned Foods Week, which he suggested be held in the fall of 1924. There was considerable discussion and great interest shown in the proposed campaign, and President Clark was requested to take up the details with the distributors' organizations and others interested.

On motion of James A. Anderson, the following resolution was finally adopted:

> Resolved, That the Board of Directors heartily approve the continued support of Canned Foods Week, and that canners be urged to support the effort by personal advertising, personal solicitation with distributors, and general promotion work.

Dr. Elwell, chairman of the Committee on Standardization of Tin Plate for Canners' Cans, made an interesting report showing substantial progress had been made in manufacturing sizable samples of plate, which were presented for inspection to the Board of Directors. This tin plate is being manufactured under the new process for cleaning and surfacing sheet steel. Dr. Elwell said that the patentors of this process desired to assign the patent under certain conditions, so that all tin-plate manufacturers would have an opportunity to use the same if they so desired. This matter was referred to the Administrative Council.

There was considerable discussion in reference to the continuance of collecting statistics on packs of peas, corn and tomatoes. On motion of James A. Anderson, the Secretary was directed to continue the collection of these statistics.

On motion of Mr. McEwing, the Secretary was directed to collect statistics on all other canned products where it is possible to get the co-operation of the industry. The Secretary was also requested to take up the question of government crop reports with the proper officials.

On motion of C. H. Sears, the date of the 1925 convention was fixed for Monday, January 19th, 1925.

W. R. Roach, chairman of the Refinancing Committee, made a report, which was ordered filed.

President Clark announced the appointment of Roy W. Hemingway as secretary of the Pea Section in place of B. C. Olney, resigned, and William McEwing was appointed a member of the Committee on Scientific Research in place of E. S. Reynolds, resigned.

The application for membership of the Hotel Sherman Company was approved. The application of F. B. Huxley & Son was rejected.

Adjourned.

BUYER WANTS SECONDS OR WORSE.

Well-known Broker Submits Business to Reputable Canner and Gets Call Down—And He Deserved It.

WE give herewith a complete copy of a letter written by one of the well-known and highly thought of brokers of the East (we are suppressing all names) to an equally well-known canner who has some pride in his products. The canner very properly took it as an insult, and we commend him for the restraint he shows in his answer. We cannot help feeling that the broker submitted this miserable business without due thought or consideration, for he is of a higher standard than this would seem to indicate. But it has not helped the general brokerage situation, for it is just such actions as this that bring the broker into bitter conflict and under justified condemnation by reputable canners. Because he is a broker he does not have to accept orders for swill or worse, and we entertain the hope that there are very few canners who would even listen to any such proposition as this. Most of them would "cuss out" the broker in harsher terms than here used:

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784

BRISTOL, PA.

May 27, 1924.

———— Cannery Co.:

Gentlemen: We have an inquiry today from one of our important wholesale grocer friends who wants a car of very cheap assorted canned goods for one of their retail customers. He wants a very low price and clean cans; quality is unimportant. Have you any odd lots of second or worse quality in good condition?

Corn,
Peas,
No. 3 Tomatoes,
Cut Green Beans,
Cut Wax Beans.

If so, please give us quantity and the lowest price.

Yours very truly,
BROKER.
————, President.

This the canner answered as follows:

May 28, 1924.

————, Broker:

Gentlemen: We are in receipt of your letter of the 27th instant, and we do not know whether this is a general letter sent to all canners, or whether you are sending this to a selected list.

If we are singled out as one of the limited number, or even a larger number, to whom to address an inquiry of this kind, we must respectfully enter our protest. We do not look upon it as at all complimentary to us to write us a letter asking for "second quality of goods," or "worse quality," or any kind of goods where "quality is unimportant," as your letter indicates. We are not turning out that class of merchandise, and don't want our correspondents to ask us for it.

In fact, we are not catering to a wholesale grocery house that is looking for that class of merchandise. We would rather not do business with them. The fact is we do not care to do business with a brokerage or commission house that is looking for that kind of merchandise.

You are aware that there is a protest made at every meeting of canners against everything that tends to give the Tri-State territory a bad reputation on quality of goods, and in parts of the country they are led to believe that this section of the country does not produce good goods, but they need only look to this territory when they want something cheap and inferior. This impression is absolutely unfair to hundreds of packers in this section, and it is brought about by the other packers who turn out inferior goods.andbythe brokerage and commission men who foster the latter class of packing, and encourage it and handle the goods, where they might easily discourage it.

It does seem a pity that your house and others have never learned this serious and important lesson, and still continue to injure the better class of packers in this section by catering to the buyers of low-class merchandise and to the packers who are foolish enough to produce it.

We would ask you in future to kindly avoid sending inquiries of this kind to us.

We remain, yours truly,
THE CANNERY CO.
————, President.

POSITION OF FERTILIZER IN SOIL IMPORTANT.

By Soil Improvement Committee of the National Fertilizer Association.

COMPARATIVELY few farmers are able to compare satisfactorily different methods of crop production on their own farms. That is rightly left to the experiment stations, which have performed services of untold value since they were established.

An instance is found in a recent announcement by the New Jersey Experiment Station of the results of work done to determine the effect of placing fertilizer in various positions in the soil with respect to potato seed pieces. These results bear out the findings of other investigators, namely, that the improper application of frtilizers may and often does have a decidedly adverse effect upon the yield. A difference of as much as 78 bushels of potatoes per acre resulted from two different methods of applying fertilizers, as follows:

Method of Fertilizer Application.	Yield.
Above seed, with soil between	128 bushels
In direct contact with seed	132 bushels
Mixed with soil in row	152 bushels
Beside seed, and on same level	173 bushels
Beside seed, but lower	206 bushels

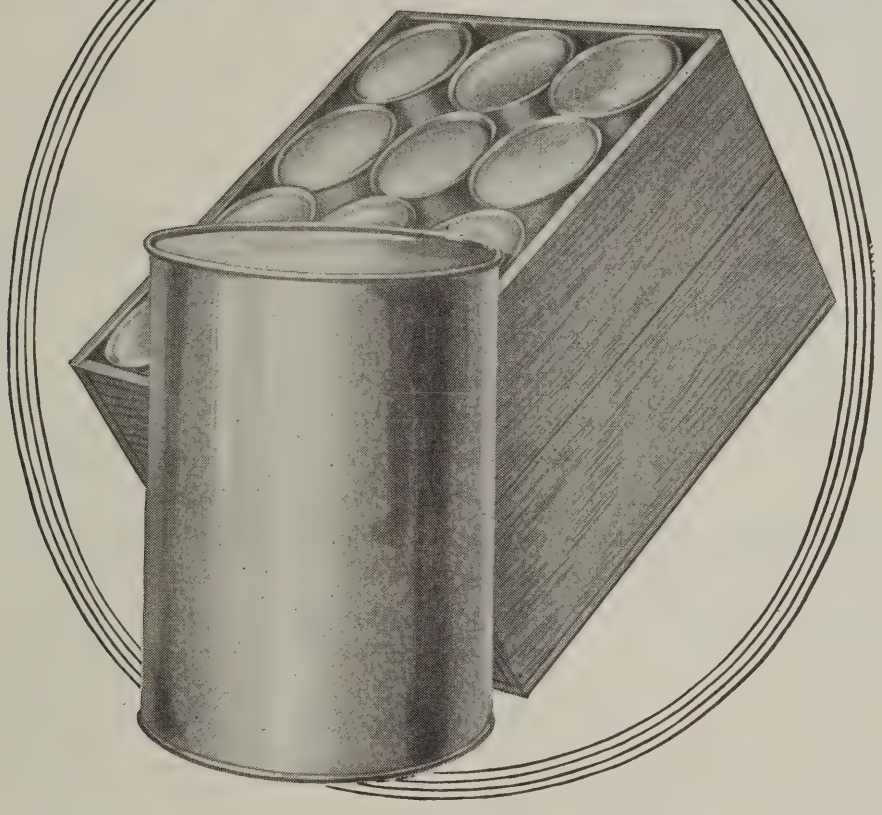
While fertilizers should be applied properly to all crops if maximum profits are to be obtained, the necessity is particularly strong in the case of such crops as potatoes, where all the fertilizer is usually applied at planting time, and of wheat and corn, which are often drilled at the same time as the fertilizer.

MICHIGAN WARNS AND ENCOURAGES ITS CANNERS.

State of Michigan, Dept. of Agriculture,
Lansing, May 10, 1924.

To Michigan Canners:

The 1924 canning season opens in a few days, starting with asparagus.



Reports received indicate that many factories have been remodeled, or are now undergoing alterations, putting in new equipment and otherwise improving conditions for factory operations.

The improvements in Michigan canning factories during the past five years are outstanding in comparison with other industrial development. The high quality of the 1923 Michigan pack is a matter of record, and recognized among distributors and consumers.

Michigan canned foods are finding favor throughout the United States, as evidenced by written and oral reports received. Moreover, within our own state there is a greater consumption of Michigan canned foods. Our food inspectors find that among others the bakeries, for example, are now favoring Michigan goods on the basis of quality.

We are hopeful that in our inspections throughout the coming season we may have the united and wholehearted co-operation of every canner. After several seasons of enforcing the Michigan Canners' Act, it

HEEKIN CANS

What are your Requirements?

FOR years the Heekin Can Company has been a leader in its line. Tough, sturdy and air tight Heekin Cans are today the finest that can be made.

The Heekin line is complete—from the small vegetable and fruit cans to the large lard or sorghum containers, there are Heekin Cans for every need. And every one is an example of quality manufacture.

Heekin Cans are giving complete satisfaction to thousands of canned foods consumers every day. Heekin Cans will be delivered at your door in any quantity your fruit or vegetable crops specify.

Write us today and let us know your estimated canning requirements. We will gladly send you prices and complete information.

THE HEEKIN CAN CO.

New, 6th & Culvert Sts. **Cincinnati, Ohio**

goes without saying that unfavorable unlawful conditions tolerated in the past must be corrected this year. In other words, inspectors will be less lenient than heretofore.

Canning or preserving fruits or vegetables that are other than sound and wholesome in every essential is a positive violation both of the Canners' Act and the Michigan Pure Food Law. We are not anticipating that any canner will attempt to use mouldy, decayed, wormy or otherwise unsound fruits or vegetables this season. We do, however, call attention to the importance of using sound products, and any violation will be prosecuted to the fullest extent of the law.

Every provision of the Canners' Act, the Pure Food Laws and the department ruling relating to the maintenance and operation of canning factories will be enforced.

In common with every leading canner, this Department looks forward to the day when every Michigan canning factory will be a show place to visitors. The use of sound raw products, approved sanitary conditions and cleanliness of factory, machinery and employes, with an invitation to the public to "drop in" (not only the local folks, but also the thousands of tourists), is an advertising medium more convincing than printer's ink.

We rejoice with every Michigan canner in the reputation established by the pack of 1923, and we sincerely hope that everyone of our 124 or more canning factories may be operated throughout the entire season of 1924, so as to reflect increasing credit to the industry.

Yours very truly,

BUREAU OF FOODS AND STANDARDS.
W. P. Hartman, Director.

CARDIFF, WALES, AS PORT OF ENTRY FOR CANNED FOODS.

AMERICAN Consul E. C. Soule, Cardiff, Wales, has called attention to that port as a logical port of entry for American food products. There are about two million people within a thirty-mile radius, and ten million within ninety miles. The country surrounding is largely industrial and mining, and practically all food is brought in, either from other parts of England or from abroad.

Unusual facilities with regard to docks, warehouses and railroads are present. The import trade in 1923 amounted to over two million tons, and the export trade to eight and one-half millions. Bi-weekly sailings are available from Baltimore and New York, and occasional sailings from West Cost ports.

Nearly every American food product which is exported is offered for sale in this district, and all are handled through other ports, as London or Liverpool, thus increasing the sailing prices locally. Direct shipments should reduce selling prices, and thus promote consumption.

The full report, No. 132,042, is on file, and may be obtained on request of the Bureau of Foreign and Domestic Commerce. The Bureau will be glad to assist American exporters in making connections for exporting directly to Cardiff.

LINK-BELT COMPANY ISSUES THREE NEW CATALOGUES.

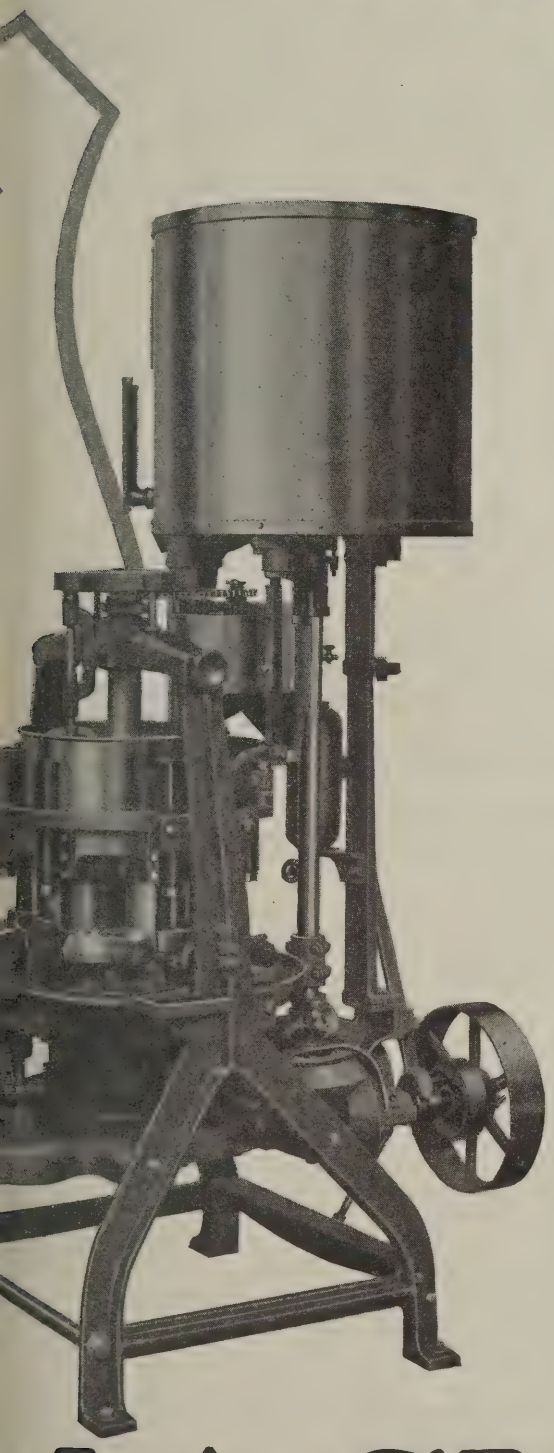
OF interest to the general field are three new catalogues just issued by the Link-Belt Company, of Chicago.

Portable Loader Book No. 650—This forty-page book covers the complete line of Link-Belt industrial loaders, which includes the "Cub" portable belt conveyor, the "Grizzly" power-swiveling loaders, which run on either crawler treads or traction wheels, and their standard types of bucket loaders for handling coals, sand, gravel, stone, fertilizer and similar materials.

Electric Hoist Book No. 580—A catalogue equal in size and attractive makeup to that of the loader book. This book has also been developed with the thought that the greatest value to all could be obtained only by incorporating constructive material and operation data. Considerably over 100 illustrations were used in the forty pages.

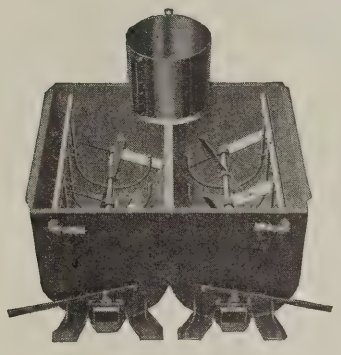
Locomotive Crane Book No. 670—Covering both Link-Belt crawler and locomotive cranes, this book is as interesting a work as any we have recently seen. It has been built along the idea that a picture will tell as much as two paragraphs. Hence it is profusely illustrated with excellent operation views.

THE SITUATION IN THE FAR NORTHWEST.



Puyallup, Wash., May 24, 1924.

SINCE our last report on Puyallup Valley crop conditions I beg to advise that weather conditions have not improved. The frost damage of several weeks ago would have been mitigated to some extent by our usual rainfall experienced during the early growing season of our bush berries, but without any exception we have never experienced a growing season with as little moisture as the present, with the result that our bush berries have not materially improved during the past thirty days. The red raspberry crop appears to be affected more seriously than the evergreen blackberries.

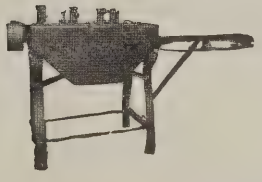


Very few loganberries are produced in the Puyallup Valley, but in other sections of Western Washington the loganberry is grown to a considerable extent, and of the very best quality. In fact, the loganberry produced in Western Washington is really the Luther Burbank improved loganberry, derived from a cross between the Mammoth blackberry and the Cuthbert red raspberry, instead of a cross between the Antwerp red raspberry and a wild blackberry, which was used in the creation of the loganberry as grown farther south.

The members of our growers' organization have been instructed to apply 100 nitrate of soda and 200 sulphate of potash immediately to every acre of red raspberries, for the purpose of stimulating growth and to help strengthen the cane to withstand the frost damage incurred. The nitrate of soda improves leaf growth, which enables the berry to take from the air additional food. The sulphate of potash adds to the physical condition of the roots, helps defend against disease, adds sugar content to the growing berry, and greatly improves the texture of the berry itself. This extra supply of fertilizer is for the purpose of endeavoring to recover as much as possible from the damage to the growing crop from unfavorable weather conditions.

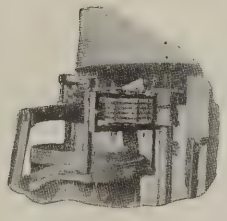
S and PEERLESS

SPRAGUE-SELLS MIXER



Each mixing tank has operating capacity of 100 gallons. Brine tank is more than ample. Plenty of capacity in a mixer at last. This machine will keep the rest of your line "humping."

SPRAGUE-SELLS CUT CORN ELEVATOR



Universal Elevator for Cut Corn. Now furnished in any length desired, complete with cover hopper and jaw-clutch pulley.

SPRAGUE-SELLS CORN CUTTER (Model 5)

Strongest and best built cutter. Single cuts, double cuts, or splits and cuts. The only Cutter that will handle Golden Bantam satisfactorily.

PEERLESS RESILKER

Can be attached to any M&S 6 Pocket Filler. Extracts silks, hulls, husk ribbons, etc., by the "Hot-corn silking method." For real quality you need this little device.

MACHINERY

uffalo, N. Y. and The Sprague-Sells Corporation, Hoopeston, Illinois

Our Marshall strawberries are damaged by adverse weather conditions at least 50 per cent. The Magoon strawberry doesn't appear to be hurt as badly as the Marshall, but it is not as desirable for barreling or canning. The districts that usually supply our fresh markets with the Clark Seeding strawberries have suffered seriously. It is now estimated that the Kennewick district, that last year marketed upwards of 60,000 to 75,000 crates of berries in the Northwest, will not be able to furnish 5,000 crates this season. The best information available indicates that the Hood River district is also suffering severely from adverse weather conditions.

This means that the local supply of strawberries will be used very extensively for fresh consumption, with the result that the barreling of strawberries in th Pacific Northwest will not be as heavy as formerly. In fact, it looks as if a very large percentage of the strawberries that are packed in barrels have already been contracted.

The "cultivated" Evergreen blackberry crop doesn't appear to have suffered as much from frost difficulties as strawberries or red raspberries, but with the unusually dry growing season the fruit arms of the Evergreen vines do not show their usual strength and vigor. This may cut the crop 15 to 25 per cent.

W. H. PAUHAMUS, President.

TO PLANT OR NOT TO PLANT, THAT IS THE QUESTION.

Whether 'tis better to plant a usual acreage, and thereby do my share toward avoiding overproduction this year—

Or to plant heavily, as many other growers say they will, and thereby be a heavy loser.

To plant heavily to lose—ah! there's the danger!

Listen, Mr. Grower.

If farmers carry out their intentions, as expressed to the United States Department of Agriculture in a survey made as of March 1 this year, the result will be the largest acreage of sweet potatoes ever planted in this country.

The acreage would be 16 per cent greater than that of 1923, and about 3 per cent over the record acreage of 1922.

Maryland is one of the states that indicated an intention to increase 20 per cent or more this year.

An average yield on the acreage indicated would make the total production of 1924 greater than in any previous year.

Overproduction Disastrous.

Overproduction is always a chief cause of loss to growers.

Overproduction in 1922 resulted disastrously to the growers.

Dozens and dozens of them on the Delmarvia Peninsula reported inability to get as much as 50 cents a barrel for their sweets, and that thousands of bushels were allowed to remani in the ground.

High Prices a Lure.

Prices were relatively high last season. Not a few farmers own up to making "some" money on sweet potatoes.

But high prices oftentimes are a lure. Not infrequently they result in greatly increased acreages the

HANSEN FRUIT AND VEGETABLE FILLER

Fills Practically Automatically But Produces Hand Pack Quality

Beets, String Beans, Tomatoes, Cherries, Berries, Kraut, Etc.

Adjustable for No. 1, 1½, 2, 2½, 3 Cans. Machine also made for No. 10 cans.

Rockfield, Wis., Nov. 26, 1923.

We are glad to advise that we are very well pleased with the Beet Filler which we purchased from you and used throughout the season. It is a great labor saving device. We used it in connection with No. 2 and No. 3 cans and it gives a good fill. We can only say the best for it.

ROCKFIELD CANNING COMPANY
BY A. J. Klumb.

Sturgeon Bay, Wis., Dec. 1, 1923.

Allow the writer to congratulate you on your Hansen Fruit and Vegetable Filler. As you know, we have been experimenting for the past five years with mechanical fillers for filling No. 2 red sour pitted cherries. Up to this year when we installed two of your fillers, we had never found anything that would operate satisfactorily on cherries but since the success we have had this year with your new filler, we feel that you have a machine which will work very satisfactorily indeed.

The machine operates very smoothly without the jamming of cans and the accompanying loss of fruit and turns out a very uniform fill. We believe your estimate of capacity which you stated was 70 cans per minute to be very conservative, for we know this machine will operate very satisfactory on 95-100 cans per minute on cherries. We expect to put in more of these machines as the necessity arises and you may rest assured that we are perfectly satisfied with their operation.

FRUIT GROWERS CANNING COMPANY
BY Edw. S. Reynolds.

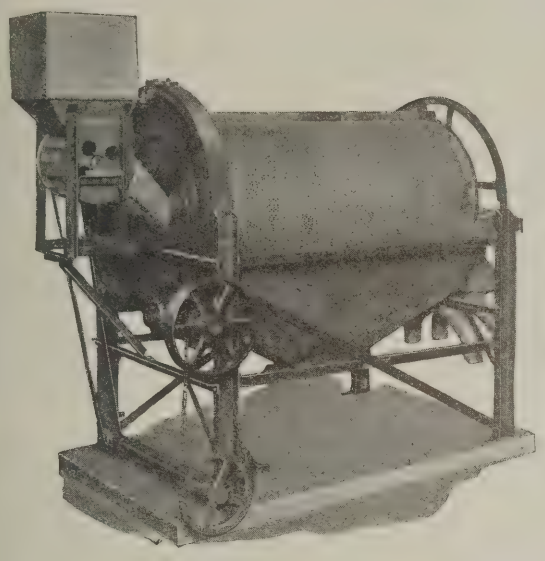
Colby, Wis., Nov. 27, 1923.

We wish to advise you that we are more than pleased with the hand bean filler, or rather as you call it, the Hansen Fruit and Vegetable Filler.

We were rather doubtful as to its capabilities until we tried it out. Wish to advise you that your filling hopper on same does not need attention, and with one girl supervising the fill of cans was all the help we needed in the canning of cut beans.

We have been complimented on the uniform fill of our beans and all we can say is we lay it all to your machine.

If you have any skeptics as to the capabilities of your filler, wish you would refer same to me or my superintendent at this plant and am sure we could soon change their opinion.



CENTRAL CANNING COMPANY
BY W. H. Christiansen, Mgr.

HANSEN CANNING MACHINERY CORPORATION, CEDARBURG, WIS.

Manufacturers of Hansen

Pea and Bean Filler, Corn Cooker Filler, Conveyor Boot, Sanitary Can Washer, Beet Topper.

The Nested Sample Grader—

Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.

Manufactured and Sold by

Sinclair-Scott Company

Baltimore, Maryland.

Makers of Nested Pea Graderr, Colossus Pea Graders, and Other Canning Machinery.

BUSINESS OPPORTUNITIES

The desirable qualities of canned foods are better appreciated today than ever before. This is largely due to the fact that canners everywhere endeavor to maintain a high standard of cleanliness and sanitation throughout their canning factories.

The use of

Wyandotte Sanitary Cleaner and Cleanser

for this purpose is proving a valuable asset.

Where this cleaner is consistently used so clean and so sanitary does it make the cookers, conveyors, and other equipment that the quality of the canned product is easily maintained. And, too, the economy of this cleaner is likewise realized.

Order from your supply house, or write us for further particulars.

Indian in circle

in every package

It cleans clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

next season, followed by—

Overproduction,

Low Prices—

And farmers being thankful to get back the money they spent for seed.

Plan Carefully.

Regardless of how many sweet potatoes are produced in your own county this season, or even in your own State, the price you get for what you have to sell will depend largely upon what is produced in other counties and states.

Hence the wisdom of planning your acreage carefully. Better confer with your county agent. Many well-meaning growers have in recent weeks signified their intention to "boost" the acreage—talking of making "the sky the limit."

Why not get a line on what the other fellows are going to do, and then gauge yourself accordingly.

No use of repeating essentially the same unfortunate experience of 1922.

Don't increase the hazard!

Don't play for high stakes when you know the odds are against you.

In the words of Theodore Roosevelt, "Be sure you're right, then go ahead."

Issued June 1, 1924, by John S. Dennee, Agricultural Statistician, United States Department of Agricultural Economics, Division of Crop and Livestock Estimates.

JEROME B. RICE SEED COMPANY PUTTING OUT ISSUE OF PREFERRED STOCK TO HANDLE INCREASED BUSINESS.

THE Jerome B. Rice Seed Company, of Cambridge, N. Y., at a banquet given their employes at the Hotel Ellis, in Cambridge, on Tuesday evening, May 27th, announced the fact that the company was about to put out an issue of preferred stock in order to handle the ever-increasing volume of business offered it, both in this country and abroad, and before offering this stock for public subscription it was thought only right that the people in their employ, whose loyalty and service has made the business possible, be given an opportunity to subscribe for this stock.

On Wednesday evening a dinner was given to the business men of Cambridge and vicinity, at which time the officers of the company gave a history of the business, its growth and future prospects, and an opportunity was offered the local people to participate in the purchase of this stock of their leading local institution. Many of the leading bankers and business men of the local and neighboring cities were present at these gatherings and expressed optimism as to the bright outlook for the Rice Seed Company.

These banquets were largely attended by enthusiastic audiences, and it is anticipated that a large part of this stock issue will be subscribed to locally.

To take care of its rapidly growing business, the company, for the first time in its history of 92 years, is opening its investment list, in a limited way, to the general public.

Local enthusiasm over the Rice expansion plans is running high, and residents of Cambridge and vicinity are looking forward to the heightened prosperity that the development of the Rice Seed Company will bring to the community.

OYSTER INVESTIGATIONS IN CONNECTICUT.

THE Bureau of Fisheries has just issued Document No. 960, entitled "Oyster-Cultural Problems of Connecticut," by J. S. Gutsell, which briefly summarizes the investigations made and analyzes the oyster situation in Long Island Sound. An attempt has been made to determine conditions affecting the spawning, setting and development of the oyster for the purpose of providing relief from the conditions unfavorably affecting the oyster industry of that region. The problem is to get a sufficient "set" or annual crop of minute oysters or "spat," the basis of, first, "seed" oysters, and finally market oysters.

Important factors in obtaining a good set of oysters are: Moderately brackish water which is neither too fresh nor too salty; water temperature preferably above 70° F.; a plentiful supply of minute food organisms; protection from heavy depredations by enemies of the oyster; firm bottom grounds and water free from destructive pollutants. In this connection it should be recalled that Long Island Sound is the northern limit, both as to salinity and temperature, favorable to the growth of oysters. Furthermore, the great reduction in sets in recent years is due largely to the discharge of sewage, particularly factory wastes, into the Sound waters, especially in the warmer inshore waters, which were more favorable to the production of a heavy set.

The chief conclusions as to improvement in oyster production in Connecticut are as follows:

1. For the restoration of the Connecticut oyster industry, in both quantity and quality, to its former productivity, it will be necessary greatly to improve water conditions, especially in the almost barren harbors and rivers from which formerly came the more highly prized oysters, and in which were produced the vast numbers of oyster larvae so largely responsible for the "heavy sets" of the past. To accomplish this, municipal sewage discharge should be controlled, and the discharge of harmful trade wastes, especially those from copper and brass works, should be prevented.

2. Until a change of conditions in estuaries makes oyster growing in them generally and extensively profitable, any great improvement by methods available at present must be produced by increased "sets" derived from the spawning of Sound oysters. Oysters on offshore Sound lots spawn too late to be effective. On the other hand, oysters on inshore lots (those within three-quarters of a mile of shore) quite frequently spawn early enough to produce usable and hardy set. Therefore, special and concerted action should be taken by the growers to keep such of the inshore grounds as are at all satisfactory well stocked with oysters. The evidence strongly indicates that by this means an improvement, small in comparison to that which would result from a thorough re-establishment of harbor and river growing, but still a considerable and much-needed one, could be brought about.

Wanted and For Sale.

This is a page that must be read each week to be appreciated. You are unlikely to be interested every week, in what is offered here, but it is possible you will be a dozen times in the year. If you fail to see and accept your opportunity your time is lost, together with money. Rates upon application.

CANNING MACHINERY AT BARGAIN PRICES

The following Machinery is practically new. Some has never been used, while a good portion of the list represents Machines that were used probably from one week to one season. Bargain prices to the early buyer:

1 No. 1 Wonder Cooker.
1 No. 2 Monitor Pea Grader.
1 New Style X Monitor Whirlpool Washer.
2 New Monitor Metal Elevators.
1 New Sprague Corn Cutter.
6 Copper Kettles.
1 15 H. P. Vertical Engine.
1 10 H. P. Vertical Boiler.
1 150 H. P. Locomotive Type Boiler.
1 80 H. P. Lomomotive Type Boiler.
2 125 H. P. Erie Economic Boilers.
1 Invincible Picking Table.
1 Lot of Retorts, various sizes.
3 Square Steam Boxes, 6 ft. long.
1 Hansen Pea Filler.
2 Morral Corn Cutters.
2 Tomato Sorting Tables.
2 Rotary Tomato Washers.
1 Lot of Galvanized Screw Conveyor for Cut Corn.
2 Kern Finishers.
2 Sprague Lowe Pulpers.
2 Sprague Lowe Pulp Finishers.
1 Lot of Belting from 4 to 24 inches wide.

We offer the above machinery and supplies at rock-bottom prices, all guaranteed to be new or as good as new.

A. K. ROBINS & CO., Baltimore, Md.

FOR SALE—

10 Coons Semi Automatic Apple Parers, practically new, at $150.00
1 Van Enwyck 4-Can Apple Filler, at..... 25.00
1 Haller Fruit and Berry Washer, at..... 150.00
1 Chisholm-Scott Pea Cleaner and Jack, at..... 15.00
1 Cuykendall Mixer and Cooker Feeder, at..... 150.00
1 Merrel Soule Corn Cooker Filler, 4 pocket, at.... 300.00
6 Peerless Corn Huskers, Model F, at..... 200.00

Above Corn Machinery has been used one short season and is practically good as new. Address Box A-1207, care of The Canning Trade.

FOR SALE—

1 20 K Bliss Crimper.
4 Bliss 1 K Floaters, equipped with 2 acid spindles and 8 solder spindles and electric units for solder pots.
2 No. 1 K Bliss Semi-automatic Testers.
1 15 K Bliss Heading Machine.

Address Box A-1208, care of The Canning Trade.

FOR SALE—Kiefer Belt Conveyor, standard type, sectional unit construction, 75 feet long, belt 18 inches wide, only used 7 months. Good as new.

Address Box A-1213 care of The Canning Trade.

FOR SALE—
One Electrical-driven Burt Labeler, for 1s and 2s.
One Hand-driven Burt Labeler, for No. 2s.
One No. 1 Burt Boxing Machine.
One No. 2 Burt Boxing Machine.
One No. 2 Burt Boxing Machine, for 18-oz. cans.
Two Monitor Bean Cutters.
One Ayars Rotary No. 3 Tomato Filler, interchangeable for No. 2s.
One 175-gallon Copper-Jacketed Kettle.
One No. 39 Ferrell Cleaner.
One 6-pocket M. & S. Corn Cooker Filler.
One 6-pocket M. & S. Filler.
One "Delphi" Steam Circle Hoist.
One Zastrow Pineapple Slicer and Sizing Machine.
One Karl Kiefer Cider and Vinegar Filter.
One Holmes Variable Speed.
One Elgin Plunger Type Filler.
Two 4-screen Sinclair-Scott "Colossus" Pea Graders.
One Model 7 Corn Silker.

WEEKLY REVIEW

Better Weather Conditions Causing All Hands to Make Speed in Planting—Hope for Big Crops Abandoned — Southern Pea Pack Not Likely to Be Up to Normal—Corn Planting Schedules Badly Disarranged —Tomato Planting Begins in Earnest—Strawberry Supply Heavy.

TRYING TO CATCH UP—The past week has given us the best weather we have seen this season; that is, the pitiless pour of the pelting rains ceased as if Nature were ashamed of her weeping, the sun came out, and there was a trace of real spring warmth in the air. It is a little dangerous to say this now, because by the time you have a chance to read this on Monday morning there may come a relapse and the tears may be more copious than ever. But we hope not, for the growers are almost too busy to eat in their haste to get some crops in while the opportunity affords. Planting schedules of all kinds have been shot to pieces, for here we are galloping into the middle of June, and crops which should have been in the ground a month to six weeks ago remain to be planted. What's going to be the result? Who can tell. It must all depend upon the kind of growing weather we have from now until frost. But even with ideal growing conditions there is not much chance that normal, much less bumper, crops can be raised this season.

The pea canners are resigned to running their plants later than ever known before, and they will be willing to so run if the crops will only come through. But even though late, the pea crop and the pack cannot be what was hoped for and wanted—needed, in fact. Such fields as are out and growing show all manner of conditions, from sickly, spindly plants, with a yellowish tinge, to good, strong, healthy, well-blossomed ones; but too often all these conditions are found in one field. However, the pea canners and growers were more fortunate than some others; a majority of the peas were planted, with some trouble, but close to schedule, and are coming along fairly well. Some have been drowned out, and most have suffered from the cold weather, even from frosts. The pack of Southern peas will not be up to normal from present indications, and it is yet too early to even guess what New York State and Wisconsin will do. Indiana and Illinois and Ohio are coming through fairly well, according to latest reports.

The corn canners and growers are the ones who have been hit the hardest. The soil has not only been too wet, but too cold for corn, and what they get in, by dodging between showers and taking advantage of every opportunity to plant, as they have done, has not been benefited by the cold, wet weather. If the present warm spell covers the corn regions and remains with us, much improvement may be looked for. But the corn canners say their schedules have been badly disarranged. No section seems to have been free of the trouble, for by a strange coincidence the entire country has been visited by pretty much the same sort of weather this spring. In this section, at least, a great deal of corn can still be sown and gotten through for canning before frost. Not so up in Maine or in Minnesota and Northern New York, although even in those sections planting time has not entirely passed, but they will have to pray for a late frost.

The handicap has not been so marked on the tomato growers. Of course, in sections where they were flooded out the growers and canners feel discouraged, but in most other sections they have been able to begin and to quite well maintain their planting schedules so far. This is late of the usual starting, and particularly late this season with those who counted upon an extra early start so as to have a longer season. A great many tomato plants were lost in Indiana, as we noted last week, through severe frosts, and spots in Ohio felt the same visitation; but there is time yet to replant and recover these losses. The cool weather will help the newly-set-out plants and permit them to start well. It is, in fact, better for them than the blistering hot days which shrivel them up and weaken, if not kill, them. We understand the community plant beds, upon which the Tri-States largely depend for superior plants, are doing very well. If the next couple of weeks are favorable, there will be a very large setting out of tomato plants. Again, it all resolves itself into a question of the weather.

The first bright days and warmth have served to bring the first real flush of strawberries to market, and, as we write, they are coming to market in excellent supply, both as to quantity and quality. Possibly it looks a little larger than it is because of the long delay, but there is no question about the quality. The Eastern Shore has been rushing them to market by every boat, and they have been selling at from 5c per box up in a big wholesale way. The canners have been taking some of them; others are taken by the soda-fountain men, who put them down in barrels with sugar; and still a third class of buyers, growing larger each year, are the men who put them into cold storage, freezing the fruit until wanted. And, of course, the market stalls and homes have made heavy demands upon them, for in strawberry season people get hungry for them. The commission men seem to think that we are at about the top of the season, with some regions yet to be heard from, but it is likely to run along for another two weeks, and then rapidly trail off.

Most fruit crops in this section, and in all other sections, we believe, are in very good condition. Michigan is coming through with good crops, and expects a good yield of cherries; New York State is in the same condition, and the Pacific Coast has more fruit than it can conveniently handle under the handicap conditions under which the canners are forced to work there. The banks will not allow the canners to run heavily, but are making them confine operations to futures on their books, with little or no surplus, regardless of what the crops may be.

Canners of apples know that there is a generous carry-over of fruit from last season, that there is a good apple crop in sight on the trees, and while fresh apples remain high in price, despite this condition, they do not believe that the prices can be maintained against this season's crops. It will be well for the canners to go carefully in apples this year.

THE MARKET—Changes are noted this week in our quotations for new pineapple. There is a good demand for canned pineapple, and the canners of Baltimore have been fairly busy on it this season, but there is not the feverish market for this product which existed during the past few years. This is probably due to the lack of speculation which made this article unsatisfactory and brought unfair charges upon the canners. It was not the canners who speculated, but outside interest, and, in fact, the canners are to be credited with scotching the practice.

Small fruits, blackberries, cherries, etc., are again showing life, and changes in their market quotations are beginning to appear. No. 10 blackberries are quoted at $8.00; No. 10 sour red pitted cherries are quoted at $9.00; No. 10 gooseberries at $8.00, and No. 10 water strawberries at $7.00.

The staple articles—peas, corn, tomatoes, etc.—remain strangely quiet. It is known that the wholesalers and the retailers have sold their stocks down so low that they are forced to come to market almost every week; but they do not seem to mind coming, and they buy only enough for immediate wants, and come back again as often as necessary. The game now is to find the goods, and it is remarkable how steady prices hold in face of this fact. The canners have not learned, it would seem, to sell small lots of goods at higher prices than larger lots. They continue to let "just these little lots" go out at prices usually below the market. They have the cart before the horse and will not change.

Our market prices remain as last quoted, although many canners will not part with their goods except at prices considerably higher. In other words, these prices are really rock-bottom. Why should we quote them that way? Well, there are always some canners who are willing to be led into sales at prices just a trifle below these figures, strange as it may seem, and on actual sales these are a happy medium of the prices ruling. It is the better traders among the canners who are able to get the better prices. The moral ought to be obvious.

NEW YORK MARKET

Conservatism the Keynote—Crop Damage Reports Make Jobbers Think—Southern Tomato Canners Continue to Quote Low Prices—Early Canned Peas Have Gone Into Consumption as Quickly as Received—Eastern Corn Is Lower Than Western—Minnesota Quotes High Prices on Corn—Buying New Cherries Slowly—Peaches Are Firm—Porto Rico Pineapple in Market.

By "New York Stater,"
Special Correspondent "The Canning Trade."

CONSERVATISM the Keynote—While the statistical position of the market remains firm, in fact has strengthened, spot trading remains rather indifferent on most items. Jobbers are apparently trying to stretch their stocks as far as possible, and there is a general disinclination to stock up extensively at present prices.

Crop Damage—Reports of serious damage to canning crops in various sections of the country are being received, and some of the buyers are beginning to wonder if their old friend Pro-Rata is going to make his reappearance in an offensive manner this year. With reports indicating heavy damage to tomato plants, some members of the trade are beginning to wonder just what will be done by some of the canners who sold futures on 100 per cent. delivery contracts at prices which at the time were said to be under probable cost of production.

Southern Tomatoes—Canners continue to quote futures at 52½ cents for standard 1s, 85 cents for 2s, $1.25 for 3s, and $3.85 to $4.00 for 10s, f. o. b. cannery shipment when canned. In view of reported crop damage, a stiffening up of values would not surprise buyers. Spots for immediate shipment are strong at 57½ to 60 cents for 1s, $1.10 for 2s, $1.35 for 3s and $4.25 for 10s, f. o. b.

Indiana Tomatoes—Many canners have withdrawn on futures, because of the recent frosts. Replanting wll be necessary, and there is quite a scramble on to get additional plants. In the meantime, prices are more or less nominal.

New Peas—Southern packers have canned 1924 crop peas in a small way, and the early run has gone into consumption, there being a strong demand for standards among jobbers at the present time. Pea packing has been late in Wisconsin this year, and the plants already in the ground have been making slow progress, owing to unfavorable weather conditions. If the Southern packers are able to put up a fair quality pack, starting the coming week, they should experience no difficulty in moving out the bulk of their pack as soon as the peas are ready for shipment.

Standard Corn—Standard corn is offered for prompt shipment from Maryland canneries at 95 cents per dozen, f. o. b. Mid-western packers are quoting spots at $1.00 per dozen, f. o. b. cannery. Future Southern corn offers at 87½ to 90 cents for standard 2s, and $6.00 for 10s, with extra standard at 95 cents factory for 2s, and $6.50 for 10s.

Fancy Corn—Minnesota packers are still quoting fancy Golden Bantam at $1.65, although little is offering. Fancy Crosby on future contracts is quoted in Minnesota at $1.30 per dozen. Maine canners are not offering futures in a large way, the market holding at $1.45 for Crosby and $1.70 for Golden Bantam. Some canners who have sold rather heavily on futures are planning to cover some of their sales by purchases from competing packers.

Salmon Slow—There has been a quiet market for salmon prevailing during the past week. Pinks are again obtainable in fair quantities at $1.25 f. o. b.. In view of the nearness of the new season, it does not appear at this time as though the canners will be successful in getting the market up to $1.30, as they have been attempting to do for some tme past. Reds remain quiet, with packers predicting a curtailed pack this season.

New Cherries Slow—Demand for new pack California cherries on the basis of opening prices named late in May has been rather indifferent. There is a fair-sized carryover of cherries in California this year, and the outlook favors a good pack this season.

Peaches Firm—California peaches are meeting with a good demand, and the outlook for the new pack is favorable. Standard 2s are in good demand, and there is an active call for pie grades in the No. 10 size. Late reports indicate that the damage to the growing crop has not been as extensive as early reports stated.

Porto Rico Pineapple—No. 10 crushed red Spanish pineapple, packed for the bakery trade by H. D. Scoville Co., of San Juan, Porto Rico, is being shown in the local market, and it is probable that a quantity of the Porto Rico pack will be taken in this market during the 1924 season.

Notes of the Trade—Sherman D. Powell, of Wiley & Powell, well known canned food and dried fruit brokers of New York, was killed Sunday evening at his home at Mahwah, N. J., by the accidental discharge of an automatic pistol which he was cleaning. Mr. Powell was one of the most popular brokers on Hudson Street. He originally started with J. K. Armsby & Co., was later with North & Dalzell, and subsequently went into business for himself with "Bill" Wiley.

Fred Buehler has resigned as manager of the New York office of Fontana-Hollywood Co.

M. W. Eley, of the Van Camp Sea Food Co., of Los Angeles, is visiting the trade this week.

C. S. Griffin, of H. C. Hemingway & Co., canners of Syracuse, New York, was in the market during the week.

The Curtice Bros. Co. are establishing a branch cannery at Wilson, N. Y., where they will pack tomato pulp.

A. C. Clark Co. and the Seaboard Trading Co. are now handling local sales for the Seacoast Canning Co. Prices named on 1924 pack Maine sardines by the Seacoast are as follows: Decorated keyless quarter oils, $4.00; decorated key quarter oils, $4.50; carton key quarter oils, $5.00, all per case, f. o. b. shipping point.

Geo. E. Hyde, of Geo. E. Hyde & Co., canners of Campbell, California, is on a visit to the local trade.

CHICAGO MARKET

The Situation in Europe as Reviewed by George W. Cobb—Progress of Crop Irregular—Some Pea Acreage Abandoned —Canners Giving the Market the Benefit of Cost Reductions—Michigan Cherries Promise Heavy Crop.

Chicago, July 6, 1924.

Special Correspondent "The Canning Trade."

By "Wrangler,"

THE Market for canned foods is devoid of special features of interest. Spot goods for prompt delivery are very scarce nearly everywhere, and having bought freely of future goods of the 1924 pack, the wholesale grocers are disposed to await the report of the season's crop and of further sales to the retail grocers, and are doing but very little buying of either spot or future goods, although there is some trading on spot goods whenever any can be found.

I received a very interesting letter from Mr. George W. Cobb, General Manager of Sales for the American Can Company, who has recently returned from a European trip. A portion of his letter is of general interest to the industry, and I take the liberty of offering it for publication, as follows:

"In regard to Europe, it seems to me that conditions are better and that most of the nations have made up their minds to go to work instead of waiting longer for their legacy. As, of course, you know, comparatively few canned foods are used on the continent, and England is the only country which can be said to consume them—there the use of canned fruits is said to be three times as great as it was before the war. California fruits are in the lead, although for several years they have been obtaining some goods packed in Australia and South Africa. There is no canned corn sold in England, and such peas as are used come mostly from France, Belgium and Sweeden—Italy supplies most of the tomatoes. Canada does some business in canned foods with the British Isles, but the fruits raised in Canada are not the popular kinds. From all I could gather, the stocks of American canned foods in Europe are well cleaned up, which was not the case a year ago. During the last year the policy of buying from hand to mouth was followed, but this year some futures are being cold, with every expectation that there will be an increase.

"The British Empire Exhibition at Wembley, just outside of London, is a mammoth affair, along the lines of our World's Fair at Chicago. It is expected that this will bring many people to England from all parts of the world, and that British Empire industries will be greatly benefited and all brought more closely in contact with the mother country."

The Crops—Several canners who have called at this office during the past week have reported the progress of crop planting as somewhat irregular and a little discouraging. In Wisconsin peas have all been planted on the high grounds, but much of the acreage located in the valleys or low grounds has been abandoned on account of being too wet, and will be planted in corn later. This is going to make an important reduction in the pea-planting acreage of Wisconsin, as along lake shores, where a great many peas are planted and grown, the weather and ground have been too wet to permit seeding.

I think that the canners of the United States are entitled to much credit for a disposition on their part to reduce costs and prices, so far as they possibly have been able to do so, for the 1924 pack, and to be giving advantage to the consumers of the lower prices of raw products that they have been able to negotiate with the growers. This in spite of the fact that the price on cans is higher for the 1924 pack than it was for the 1923 pack.

The pea canners and the corn canners have not been able to make reductions in the price of 1924 canned foods compared to those of 1923, because they have not been able to secure lower prices for raw products from the growers; but in some instances have been compelled to pay more. Their prices, therefore, are on the average a little higher than those of 1923, at least to about the extent of the advance in price of cans, and with pea canners standard grade of peas has been advanced sharply because of the extraordinary demand for the standard or lower grade and the desire on the part of the pea canners to improve and elevate quality and to pack a smaller than usual proportion of the standard grade of peas.

Two articles so far have been priced for 1924 pack considerably higher than the pack of 1923. I refer to canned beets and canned Refugee green and white beans. These articles are always scarce, and for a number of years there has been an insufficient pack to meet the demand, and the caners are fully justified, by the extraordinary demand, in advancing the price of these articles.

In general as to many articles that have been priced so far of the 1924 pack, the prices named have been as low as the 1923 price, or in a number of instances very much lower than the opening prices of 1923.

These articles are as follows: Asparagus, pork and beans, pumpkin, spinach, sweet potatoes, apples, blackberries, raspberries, California peaches, California Royal Anne cherries, red sour pited cherries, Hawaiian sliced pineapple, domestic sardines, grapefruit, chinook salmon, lobster and probably one or two other articles which I have overlooked.

All of these last-mentioned articles are priced for 1924 pack lower than the 1923 opening prices, and when buyers of canned foods and other critics are disposed to blame canners for pricing canned corn and standard peas a little higher in order to cover the advanced cost of cans, they should consider wherein these numerous articles mentioned have been reducd. It is also the case that Eastern and Southern canned tomatoes are as low, or lower, than they were priced in 1923, although the 1924 price for Indiana tomatoes is just a little higher to the extent at least of the increased cost of cans than was last year's price.

The Grocers—The big convention of the National Wholesale Grocers' Association brought quite a number of visiting canners to Chicago, and it is reported that there were some important transactions during the convention in future contracts for canned foods.

The convention was a little abbreviated and confused by the intervention of Memorial Day, which shortened the convention one day and crowded its proceedings up, but it was nevertheless a splendid convention. Royal F. Clark, president of the National Canners' Association, made a splendid address, as he usually does, which was well received by the wholesale grocers. It was diplomatically and tactfully worded, and yet had the strength of earnestness and sincere conviction embodied in it.

Cherries—The big red sour cherry producing district of Wisconsin and the cherry producing districts of Michigan are reported to be promising a heavy yield of fruit, and Michigan is pricing No. 10 red sour pitted cherries, heavy filled cans, at $8.50 per dozen, f. o. b. canneries, for delivery from the 1924 pack.

Canned corn is selling very well for spot goods, and the wholesalers seem to be in the market for any good bargains that are offered in this article. This is also the case in relation to canned peas. Canned salmon is selling very slowly on account of the continued cold weather.

We have only had two good, warm growing days in the lake region since the 1st of January, but have had cold, wet weather all spring. Of course, back from the lakes, where the temperature is not affected by the water, we have had some warm and good growing weather, but north of Chicago, in the vicinity of the lakes, the season is very backward.

ST. LOUIS MARKET

Wants of Buyers Becoming More Numerous as Stocks Clean Out —No. 2 Tomatoes Demanded—Weather Reawakens Interest in Peas—Beets at a Premium—Spinach Short in Supply—Canned Foods Market Prices.

St. Louis, June 5, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

BUYING as Needed—There has been very little doing in the canned foods market recently. Distributors are covering their frequent and varied shortages, but they are not buying more than they require for immediate wants. They take a few cases at a time, and then in a day or two repeat. Most of the items bought are those that can be featured at popular prices, and this creates a demand for fair standard packs, instead of those of better quality. The shortages make the substitution of various grades and sizes which are most available. Odds and ends are picked up for the resale from the spot and other nearby centers, where the goods can be had for prompt shipment. Very often small parcels are purchased which under other conditions a large distributor would not care to purchase. The idea seems to be to carry small working stocks and get along until the new

packs arrive, without creating a surplus over present holdings.

Tomatoes—Tomatoes are dull in all sizes but No. 2s. The difference between 2s and 3s is less than usual and is getting closer, because 2s are going upward, while 3s remain easy. The smaller sizes are preferred by the retailer because they are easier sold. Gallons are dull. There appears a little more interest being shown in futures.

Peas—Few standard or fancy peas are available, but there seems to be plenty of intermediate packs. They are not much wanted, however, but are being pushed whenever possible. Futures are attracting some attention because of adverse weather reports, and when heretofore buyers thought prices a little bit high, they are now making efforts to cover, but canners are not generally trying to solicit business.

Corn—Fancy corn is scarce and higher. Standard grades are having a routine business, and there appears to be enough in the market to take care of all requirements.

Miscellaneous—Beets are scarce, and when obtainable are held at a premium. Sweet potatoes are selling better than they did, and higher prices are being asked. String beans are wanted, but are practically out of the market. Succotash is in about the same position. New pack asparagus is wanted. Spinach is firm, with supplies short. There will be no California surplus is the information received here, and the Southern pack is promising.

Fruits—California peaches are the firmest items on the market, and desirable counts when found are taken. Standard clings are firmer than choice. Stocks of all canned fruits are more closely closed up in California than at any time for many years, and it is almost impossible to get desirable assortments. Pineapples continue to attract attention. Pears are firm, but the stock is low. Cherries and berries are movng fairly well.

Market Prices—The following are quotations here for canned foods, carload lots, f. o. b. at point of shipment:

Tomatoes—	
No. 2 Standard, Indiana	$2.15
No. 3 Standard, Indiana	1.75
No. 10 Standard, Indiana	5.55
Corn—	
No. 2 Fancy Crosby, Minnesota	1.35
No. 2 Fancy Golden Bantam, Minnesota	2.00
No. 2 Standard Evergreen, Wisconsin	1.00
No. 2 Extra Standard Evergreen, Wisconsin	1.10
No. 2 Fancy Narrow Grain, Extra Sweet, Wisconsin	1.20
No. 2 Fancy Country Gentleman, Wisconsin	1.35
No. 2 Fancy Country Gentleman, Illinois	1.35
No. 2 Fancy Standard Evergreen, Illinois	1.10
No. 2 Standard, Illinois	1.00
No. 2 Standard, Iowa	1.00
No. 2 Extra Standard Country Gentleman, Indiana	1.25
No. 2 Fancy Country Gentleman, Indiana	1.30
Canned Peas—	
Fancy No. 1 Alaska, Wisconsin	2.60
Fancy No. 2 Alaska, Wisconsin	2.25
Fancy No. 3 Alaska, Wisconsin	1.75
Extra Standard No. 2, Wisconsin	1.95
Extra Standard No. 3, Wisconsin	1.50
Extra Standard No. 4, Wisconsin	1.45
Fancy No. 2 Sweet, Wisconsin	2.20
Fancy No. 3, Sweet, Wisconsin	1.90
Fancy No. 4, Sweet, Wisconsin	1.60
Extra Standard No. 1 Sieve, Sweets, Wisconsin	2.00
Extra Standard No. 2, Sweets, Wisconsin	1.75
Extra Standard No. 3, Sweets, Wisconsin	1.50
Extra Standard No. 4, Sweets, Wisconsin	1.40

MAINE MARKET

Retailers Fairly Busy—A Few Cars of Spot Corn Left—Few Cars of Apples Left—No More Contracts for Future Corn—Lobster Pack Will Be Light—The Sardine Situation Has Not Improved Much.

Portland, Me., June 6, 1924.

Special Correspondent "The Canning Trade."
By "Maine,"

RETAILERS Busy—The past week has shown some improvement in the local grocery trade, though business is yet far bellow normal. There has also been a little improvement in the call for canned foods, but as Maine canners own very little spot stock of any kind this has not influenced the market. There are a few scattered holdings here, but no one owner has enough to make him anxious to sell.

There are a few lots of corn still owned by the canners, none of them amounting to more than a car. And the bad weather of the past month has added to the value of these goods, as corn is sure to be short in September. No. 10 apple probably shows a dozen cars, scattered among six or seven owners, and these goods are held today at $3.75 for nice stock. June and July are usually very good selling months for apple, so the new season will find a clean market. Some clams have been carried from the pack just closed and are priced at $1.30, the same as the opening figure. The present stock is all in 5-oz. size. This really comprises the whole of the spot stocks held by Maine canners.

Future corn is so well sold up that sellers do not care to take any more contracts under present weather conditions. After the dubious head-shavings of the past spring, there will be no double chins among the Maine corn canners for a while. The very best of weather and factory conditions from now until October will be necessary in order to insure a full delivery on present contracts; and a very slight set-back wuold mean a prorata yield from some or all canners. During this time of no-sale, of course there have been no changes reported from the prices current all through the season $1.45 and $1.70 for Crosby and Golden Bantam.

Bean canners have sold up all they can produce this season, and still the demand is strong. There has been a lack of seed, but the only effect this will have is to prevent increasing the acreage. The Maine variety of stringless beans has improved in quality and increased in sale so steadily that it is now being added as a staple by all large private-label buyers. The price has been quite firmly maintained at $1.30 for No. 2 and $6.00 for No. 10s.

The lobster question is truly a question. Sales have not been as heavy this season as was anticipated, and canners are now finding this fact a cause for rejoicing, since the pack is going very slowly and bids fair to be very far below normal. Reports returned from the canners now visiting their eastern factories indicate that it is very difficult to get fishermen and that the supply of lobsters is therefore very limited indeed—or perhaps the lobsters are so scarce that it is difficult to get fishermen. Anyway it all seems very discouraging to the canner.

The sardine situation has improved but little. The warmer weather has brought a few more fish, but the supply is still far too small to make operation profitable. Five of the factories owned and operated by the new owners of the Seacoast Canning Co., are now open, and the other six will be started up just as soon as fish can be procured. The shops now running are working on short time and no capacity business is anticipated before July.

Mr. H. L. Forhan left last week for Nova Scotia where his lobster canneries are located. Mr. C. L. Baxter, of the Portland Packing Co., has been "down east" for a couple of weeks already, waiting for the work to start up.

Mr. T. H. Johnson, of the T. H. Johnson Co., and the dean of Maine brokers, is confined to his home with a severe attack of arthritis. He is now able to get about with the aid of a cane, and will soon return to his office as usual.

Frederick B. Marston Dead—Frederick B. Marston, for many years associated with the wholseale grocery firm of Conant-Patrick Co., on Commercial Street, died suddenly yesterday morning at his home, 43 Coyle Street. He was at the time conversing with his physician, Dr. Philip P. Thompson, who had been called in to relieve him from an attack of indigestion, when he fell forward and expired.

Mr. Marston was 54 years of age and was born in Falmouth, the son of the late Seward B. and Harriet Marston. He came to Portland about 32 years ago, and entered the employ of the Conant Patrick Co., as bookkeeper. He remained with that firm until very recently, having been advanced until he became vice president of the firm.

He was married 28 years ago to Elizabeth S. Fairbrother, of Portland, who survives him, together with one son, Frederick B., Jr., of Boston. He also leaves two sisters and two brothers, Mrs. Edith Banks of California, and Mrs. Mary Chase, of Cumberland, and Charles and Harry Marston.

He was a thirty-second degree Mason, Past Master of Deering Lodge, past high priest of Mount Vernon Chapter, was a member of Portland Commandery, Kora Temple, Shriners, President of the New England Grocers' Association, and a member of the Council of the National Wholesale Grocers' Association, and also belonged to the Woodfords Club and United Commercial Travelers, and was a past patron of the Eastern Star.

CALIFORNIA MARKET

Drouth Making Trouble for the Fruit Growers—Hot Wave Adds to Troubles—Cherries Are Drying Up—Expect Tomato Prices—Beet Prices—New Packed Sauerkraut—Business Better Than in 1923 — Pear Growers Want to Go Back to Former Standards.

San Francisco, June 5, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

DROUTH Harmful—California fruit growers are having their troubles this season, and while prices promise to be more satisfactory than was the case last year, profits are not looming up very large. The drouth is having a serious effect on orchards, and many are in rather poor condition, despite efforts to secure water by pumping. Early frosts did much damage in the Sacramento Valley, and crops are badly spotted, with some varieties showing a real shortage. The latest discouraging feature is the hot wave which swept the State the last three days of May. Manager J. L. Nagle, of the California Fruit Exchange, estimates that the loss to growers as a result of the hot winds will not be less than a million dollars. The damage, he reports, is largely in Placer county, although Yolo, Solano and the Sacramento River district also are affected. Cherries have been dried up, apricots are being ripened prematurely, and some damage has been done to peaches. Canners are insisting that the fruit handled by them this year run to high grades, while Nature seems to be working to produce fruit of a small size and indifferent quality.

Tomatoes—Opening prices on California tomatoes have not been made by the large packing interests at this writing, but are expected to make their appearance early in June. The extent of the acreage is now well established, and all concerned are anxious to have prices named on futures. Considerable business has been offered, subject to approval of opening prices and the naming of these cannot well be delayed longer.

Beets—The California Packing Corporation recently put out opening prices on the 1924 pack of Del Monte red table beets, and is booking quite a business on this line. The demand for this article has been developed to a point where some territories buy them in straight carloads, and each season witnesses an increase in the pack. The 1924 opening prices are as follows:

No.	2	Tall, Whole, Tiny	$2.60
No.	2	Tall, Whole, Small	2.35
No.	2	Tall, Whole, Medium	1.90
No.	2	Tall, Sliced	1.75
No.	2½	Whole, Large	2.25
No.	2½	Whole, Extra Large	1.80
No.	10	Whole, Large	5.50
No.	10	Whole, Extra Large	5.00
No.	10	Sliced	5.75

The California Packing Corporation has also come out with opening prices on new pack Del Monte sauerkraut as follows:

No.	2½		$1.25
No.	2	Tall	1.10
No.	10		3.85

These prices are for less than carload lots for California assorted cars. For carload rail shipments, f. o. b. Kenton, Ore., the prices are $1.15, 95c and $3.45, respectively.

Sauerkraut—The consumption of canned sauerkraut has increased very materially during the past few years, and with the publicity it is being given it is anticipated that the demand will continue to grow rapidly. Deliveries of the new pack are now being made.

Business Improved—The California Packing Corporation has done a much larger business during the period from March 1 to the middle of May than was the case during the same period last year, states R. M. Barthold, vice-president and director of sales, the gain having been almost 50 per cent. "We can look forward to somewhat advanced prices on the 1924 pack of canned fruits," he said, "as it is quite evident that a higher price will be paid growers for their products than last year. If our growers will hold the price on raw fruit on a basis so that they receive fair returns on their investments, there is no reason why the canners should not be able to market the finished product on a basis that would give fair return to the growers and a reasonable profit to the canners, with a price to the consumer that will assist in the increased consumption of canned fruits and berries.

The fruit growers of California were familiar last year with the large carry-over from 1922 and with the unsettled conditions that existed, and as a result sold their raw materials to the canners at a conservative price. The result of this was that the canners made very low selling prices to the trade on the 1923 pack of canned fruits, and these facts assisted very materially in bringing back or re-creating an excellent demand. The present carry-over, although somewhat heavy, will, in the face of the present good demand, be greatly reduced before the next canning season. It is still too early to predict what the crop will be of the various varieties. Growing conditions to date have not been entirely favorable, and damage has been reported from different districts. It is reported that peaches are damaged approximately 30 per cent, while on pears the damage is light. General business conditions, on the other hand, have greatly improved, and the demand for canned fruits, at this date, is excellent and undoubtedly will continue if prices remain on a reasonable basis."

Pears—Owing to the drouth and to the fact that many canners made use of such large quantities of No. 2 pears last year at a low price, the organized pear growers of California have suggested that the specifications adopted last year be done away with and that a return be made to the former grades. Last year the specifications for No. 1 canning pears were increased from 2¼ inches to 2⅜ inches. Canners do not favor the plan of returning to the old specifications, declaring that standards must be improved, rather than lowered.

Salmon—The demand for canned salmon seems to be keeping up well in this market. Holdings vary quite widely as to quality, and prices run a wider range than usual. Pinks are in special demand, with large concerns in the market again to replace stocks.

The Oregon Fish and Game Commission is commencing to restrict the taking of crabs and clams, and efforts are being made to limit the quantities taken by tourists and residents, as well as by commercial fishermen.

Prof. E. L. Overholser, of the Division of Pomology at the University of California, left late in May for England as a delegate to the Fourth International Congress of Refrigeration, to be held in London. He is considered an authority on this subject and has frequently addressed meetings of California fruit growers and canners.

WHAT THE BROKERS SAY

Aberdeen, Md., June 4, 1924.

Tomatoes—The continued cool and rainy weather has caused a decidedly firmer feeling among the packers, and it looks now like the acreage would not be nearly as large as was anticipated earlier in the season. Farming in this section is at least four weeks behind schedule time, due to the excessive rains, which have kept the ground too wet for cultivation. Offerings of future tomatoes are not as liberal as they were some time back. On the other hand, jobbers are resting easy, awaiting developments. The spot market is somewhat firmer. The two mixed cars offered in our last circular were quickly snapped up. We can still buy a limited quantity of future tomatoes at 55a57½c for 1s, 85a90c for 2s, $1.25a1.30 for 3s, and $3.90a4.00 for 10s, all f. o. b. respective shipping points, for shipment when packed.

Corn—Spot corn is getting pretty well cleaned up. The weather conditions above referred to are seriously interfering with the corn planting. The packers of fancy whole-grain shoepeg corn aim to have their corn planted at intervals, so that they can handle it as it matures. The backward spring has upset their calculations, and will keep them hustling to get up a fair pack of fancy quality. In spot corn we have standard shoepeg at $1.15, extra standard at $1.25, and fancy at $1.50. We can buy standard crushed sugar corn at 90a92½c, extra standard at $1.00 per dozen, under packer's label.

For future delivery we can buy standard shoepeg at $1.25, extra standard at $1.25, fancy at $1.35, and standard crushed sugar corn at 90a95c, f. o. b. factory.

Vegetables—We quote No. 2 Early June peas, No. 4 sieve, for shipment when packed, at $1.20. No. 3 sieve at $1.30, No. 2 sieve at $1.50, No. 2 soaked peas at 67½a75c, No. 2 spinach 3s at $1.45. 10s at $4.25, No. 2 sauerkraut at 80c, 3s at $1.10, No. 2 mixed vegetables at 95c, No. 2 soaked lima beans at 85c, No. 1 tomato pulp at 57½c.

C. W. BAKER & SONS.

What Canned Foods Distributors are Doing

Jobbers Want Revision of Canned Foods Contracts—Association Has Not Attempted to Intimidate Manufacturers to Prevent Sales Direct to Other Dealers, Says Herscher—Express Rates Lowered.

WANT Contract Modified Wholesale grocers plan to seek further modifications and revisions in the present form of canned foods contract, according to the report of L. W. Mallory, chairman of the contract committee of the National Wholesale Grocers' Association.

"Some of our members," the report reads, "may be disappointed at the apparent inactivity concerning canned foods contracts, but suggested changes (and there are a number of them), have not been placed before various canners' committees for the very good reason that the question of "swells" guarantee, which at last has been agreed upon by our conference committee and that of the National Canners' Association, has occupied the center of the stage since the 1923 convention held at St. Louis.

"Suggested changes in present form of canners' contracts were presented for the use of your president and secretary prior to the meeting of the National Canners' Association, held at Buffalo, January 21, but were not submitted for consideration of the canners' contracts committee, as the time was well occupied with consideration of the swells problem. The data concerning proposed changes are still available for the incoming chairman of your contracts committee, subject, o, course, to such additions or omissions as he may consider proper and advisable."

Morey Heads National—John W. Morey, of the Morey Mercantile Company, Denver wholesale grocers, was elected president of the National Wholesale Grocers' Asssociation for the coming year. Austin L. Baker, of Eldridge, Baker & Co., of Boston, was elected first vice-president; O. J. Moore, of the O. J. Moore Grocer Co., Sioux City, Iowa, was elected second vice-president; and Roy L. Davison, of M. O'Connor & Co., of Indianapolis, third vice-president; Sylvan L. Stix, of Seeman Bros., New York City, was again chosen as treasurer.

J. W. Herscher, of the Hubbard Grocery Co., Charleston, West Virginia, retiring president of the National, spoke of the service which the association has rendered the trade and consumers alike. By service, he said, the National means the greatest help to jobber, manufacturer and retailer alike. "We have shaken off the shock of a post war debacle which mercilessly swept all before it," he said, commenting on business conditions, "but we find ourselves still confronted with the necessity of getting back to that condition of normalcy from which we departed so many years ago. First, I firmly believe that one deterrent to our efforts to get back to the 'good old days' is the present high rate of taxes. There is no doubt that reduced taxes will release for productive effort many millions of dollars, and it is with great earnestness that I urge you to continue to present to public officials reasons why our present tax rates should be reduced. Now, as to the trade association and the place which it occupies in our great commercial structure. The trade association is so interwoven in our business fabric, it is so much a part of our industry, that as Secretary Hoover says, 'It has become an important business institution.' A trade association has been defined as an organization of producers or distributors of a commodity upon a mutual basis for the purpose of pomoting the business of its branch of industry or commerce, and improving its service to the public. A trade association lives and progresses only to the extent that each individual member contributes to it unselfishly and in a spirit of co-operation for the general good of the industry and the public. Our aim is to be of benefit not only to the various interests in the food trade, but also to the public, and this is an object in which we have been especially succesful, by reason of our vigorous advocacy of pure food laws and statutes compelling honest weight and measure. Toward such ends as these we must earnestly co-operate with other organizations, maintaining meanwhile our independence and individuality. So far as our association is concerned, every manufacturer now, and always has been, absolutely free to sell his products to any person or companies whatever, and in any way that he deems best. The association is not opposed to direct selling by any manufacturer nor to direct buying by any dealer, but it most unequivocally holds to the belief that the wholesale grocer offers at once the cheapest and most efficient facilties for distribution, and when the nature, extent and value of the wholesale grocer's services are fully understood by mnaufacturers and producers, they increasingly and naturally choose the medium that is cheapest for them. Irrespective of this association's attitude, manufacturers understanding the difficulties and expense of the work of distribution will inevitably use the wholesale grocer, theorists and inexperienced reformers to the contrary notwithstanding."

Better Containers—Steady improvement in the matter of containers for shipments of canned foods and other groceries is being made, according to a report by A. E. Ayres, chairman of the containers committee of the National Wholesale Grocers' Association. The committee received full co-operation from shippers and manufacturers during the past year, but received no voluntary help or co-operation from wholesale grocers. "We have carefully watched the freight classification supplements for any provisions affecting our business, but nothing developed along this line needing attention insofar as shipping containers are concernd," the report concludes.

I. C. C. Orders Express Reductions—The Interstate Commerce Commission has announced an amendment to its recent order calling for lower freight rates on foodstuffs. Its latest amendment becomes effective June 21, and directs reductions in express rates on fruits, berries, vegetables, butter, and eggs in carloads. The amended order provides that the new rates will not exceed those in operation October 12, 1920, a reduction of approximately 10.7 pr cent. In its order the I. C. C. says: "It is ordered that the order heretofore entered in said proceeding on November 10, 1923, insofar as it pertains to commodity rates applicable to the interstate transportation of articles of food by express, and as amended by further order entered in said proceeding on January 14, 1924, be, and it is hereby, further amended to read as follows: That the several respondent carriers of express traffic, according as they participate in the transportation, be, and they are hereby, notified and required to cease and desist, on or before June 21, 1924, and thereafter to abstain from publishing, demanding or collecting for the interstate transportation of fruits, berries, vegetables, butter or eggss, in zones, insofar as commodty rates are now applicable thereto, rates which shall exceed those prescribed in the next succeding paragraph hereof. It is further ordered that the said respondents, according as they participate in the transportation, be, and they are hereby, notified and required to establish, on or before June 21, 1924, upon notice to this commission and to the general public by not less than five days' filing and posting in the manner prescribed in section 6 of the Interstate Commerce Act, and thereafter to maintain and apply to the interstate transportation of fruits, berries, vegetables, butter and eggs, in carloads, by so far as commodity rates are now applicable thereto, rates which shall not exceed those in effect on October 12, 1920, from and to the same points."

Buys Cleveland Piggly-Wiggly Stores and Rights—The Missouri-Illinois Stores Company, which bought the Piggly-Wiggly stores and franchise rights in St. Louis last year, has taken over the eight Piggly-Wiggly stores in Cleveland, together with franchise rights for that city. George Wearen is president of the Missouri-Illinois stores, and plans to expand the Cleveland end of the business, which is now under the management of Thos. Good, former Washington, D. C., Piggly-Wiggly general manager.

The Southern Tier Wholesale Grocers' Association held their annual spring meeting at Binghampton on June 4. Speakers before the meeting included Dr. Lewis Haney, director of the bureau of business research of New York University, and Phil C. Staib, president of the New York Wholesale Grocers' Association.

CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CAMERON CAN MACHINERY CO. 240 N. Ashland St., Chicago, U. S. A.

Are people familiar with your brand?

Goods well displayed are half sold, and actual tests prove that good looking counter displays (silent salesmen) will positively increase sales.

How many brands of Canned Foods are actually called for by name? And isn't it true that crowded shelves confuse the purchaser so that the grocer's suggestions are usually accepted.

Why not let people become familiar with your label and ask for your brand by name? An attractive counter display will bring your can off the shelf down on the counter where it can be seen by everyone entering the store.

We have made a study of this subject and originated some particulary successful displays. May we plan one for you?

SMILE AWHILE

CURRENT NEWS

"How come you are wearing such ragged clothes, Jim?"
"Lost my others in a financial panic as it were."
"I haven't heard of any disasters lately. Wotzis?"
"I went in swimming in the river last week and left my clothes on shore. It rained while I was bathing, the river rose and . . . . well, the bank went under."—Sun Dial.

WINS THE CASE

Patrolman—Your honor, this feller got tired of havin' his wife's relatives livin' in his house, an' he's charged with kicking 'em out and chasing 'em ten blocks wit' an ax.
Judge—Take him away. I have no jurisdiction over the awarding of hero medals.

INCREDIBLE

He—Did you ever see a corn-husking bee?
She—No, and I don't believe any bee can do it.

A REAL GRUDGE

Newspaper Man—You're sure this scrap between the Battling Kid and Knockout Bangs is a real grudge fight?
Promoter—Yup—Bang's wife divorced him and married the Kid.
"Oh, Knockout intends to take it out on the Kid?"
"Naw—Knockout will try to defend himself."

MISSING

She's dead and buried now, I ween.
For some few years she has been missed.
We have the girl who's sweet sixteen,
But where's the one who's ne'er been kissed?

AH, YES

Newsboy—Paper, mister?
Professor—Why, yes, I believe it is. So it is. Curious, isn't it? Good day.

WHY, OF COURSE

"With all due deference, my boy, I really think our English custom at the telephone is better than saying 'Hello!' as you do."
"What do you say in England?"
"We say: 'Are you there?' Then, of course, if you are not there, there is no use in going on with the conversation."—Continental (Chicago).

AGREEABLE ALL AROUND

Mistress—Is my bath ready, Clara?
Maid (no reference)—Why, this ain't Saturday night.
"How dare you? I bathe twice a day, of course. I don't want a maid as ignorant as you seem to be. Leave my employ."
"I'll go, all right. I don't want to work for nobody who needs a bath as often as you seem to."

TOO GOOD

"No man can kiss my daughter and get away with it!" stormed her father.
"But I'm not trying to get away," protested her suitor. "I came back for more."

AN EPISODE

A maiden got my hand and heart,
A banker got my note,
The preacher got my name in full,
The landlord got my goat.

The moving man got all my cash,
The lawyer got my wife—
Thus ends another episode
In struggling through a life.

EDITORIALS

WANDERINGS AND WONDERINGS—Wonder how some of our canner friends would feel if their oratorial efforts at a canners' convention were referred to by us as have been the remarks of "Keynoter" at the recent Cleveland Republican Convention by the daily papers?

We have heard of "panned" fish, but never of one so thoroughly well done as this unfortunate Burton, who delivered the extemporaneous address so carefully prepared for him, unless it be his brother, who had the task of nominating the next standard-bearer of the Republicans, who had been denominated many months ago by said standard-bearer.

Will the docile and bovine-like voters of this great land of the free and home of the brave accept the evasive, featureless, peace-with-all-men-at-any-price platform which the marionettes of this convention presented them, and vote for it next November? They will.

And at next week's convention in New York city will the other team (the two great parties are playing the same game, with one "in" or at the bat and the other out) nominate the man the people want, or do as their political bosses tell them and name some man who is bloodless, spineless, with milk-and-water principles, or no principles at all, so that he will not alone be subservient to the politicians' wishes, but so that no one can take exception to him because of his opinions (having none), and he may therefore attract the votes of everyone? They will, and with a platform as devoid of any real question of moment as this Cleveland platform.

The two parties, the Republicans and the Democrats, should be merged, or at least such of each party as endorse the actions (save the mark) of these two conventions, and the party be called the Morons; and then there should be formed a new party of men of intellect and decency, with the strength of character to face the needs of the country and not be ashamed to name them, stand for them and then see them through. Phariseeism has shown its ugly head at regular recurring intervals since the earliest days of recorded history, but it has never accomplished anything except disaster. It now influences both old parties. The great mass of this fine, young nation, however, is not tainted with this curse, and it ought to be able to throw off this attack if it move quickly and more completely than ever was done in the past, and to work free of the cowed condition into which these liars and hypocrites have thrown them by their pretended right to govern all morals and all lives.

If either of the so-called great parties had a spark of manhood about it, it would undertake this emancipation now and at once, for all the country recognizes the dire need of this right now. But neither has the grit, and so we see the farce we have seen, and will again see next week. God give us men in this our hour of need.

Lest you forget: The Scribes were the students of the old Mosaic law, and the Pharisees the enforcement agents of it, and they preached the letter of the law and nothing else, never the spirit. While they preached observance of the law, morality and honesty, they robbed and outraged and enriched themselves, ruling with an iron hand in the name of morality, and it was Christ Himself who said of them: "Woe to you, Scribes and Pharisees, hypocrites." Can you see no counterpart of this in these days? If you cannot you must be blind. In the days of Christ they ruled from behind, and played upon the ignorance of the masses, even inducing them to put Him to death. Today they are playing upon this same ignorance, and have brought the country to a degree of depravity and degradation that no one ever thought possible.

Put your ear to the ground and you will become aware that while we may have been wondering we have not wandered so far from the best interests of this and other business as might be supposed.

IS HAND TO MOUTH BUYING HERE TO STAY? asks The Literary Digest of June 7th, and then goes on to prove, apparently, that it is. Commenting upon this, President W. H. Killian, of the Baltimore Canned Goods Exchange, says in a letter to us: "This article certainly reflects the present state of mind of the canned foods buyer, just as it seems to have impressed buyers of more stable merchandise.

Stable merchandise can be manufactured as the need and demand arise, when the hand to mouth buying becomes a fixed practice, as this writer seems to intimate it will become. But it is going to be an entirely different matter when it comes to the preservation of food crops for the consumers' use during the closed seasons. In other words, if "hand to mouth buying" is going to become a fixed policy among canned foods buyers, it will not be very long before the canner who finds no opportunity to sell his goods as futures, or even as packed, will be forced into the position of a speculator, and sooner or later a lot of them will be eliminated because of unprofitable speculation, and the result will be that production will narrow itself into fewer hands, both among growers and canners. When the canned foods buyer precipitates such a condition and finds himself restricted to fewer sellers who are able to operate under such conditions, we seriously doubt if the consumer will be benefited by such a policy."

It is certainly a thought well worth serious consideration. Our old friend the banks, in their usual short-sighted methods, have been urging all buyers to this style of hand-to-mouth buying, and business generally, not alone the canned foods business, has come to this condition. It will bring a whole train of evils behind it, just as certain as can be. If every man waits until his immediate needs before buying, business must of necessity be slowed down, stopped and not easily started again. Employment will become spasmodic, irregular and lacking in wherewithal to buy; equipment, carriers and roadbeds neglected and allowed to deteriorate; and the banks, these money-changers who are so solicitous of their own welfare, will find that, instead of saving, they are losing their investments by making them unprofitable and too expensive to maintain on a hand-to-mouth policy. In other words, these bankers in striving to force quick and frequent return of the money through their hands, will find that they are trying to keep going the ponderous machine of production, now grown to enormous size in this country, with but a drop of oil, and that this cannot be successfully done.

This policy, inaugurated by the banks, is nothing but a heinous crime, even though it be committed in blindness, against all business, against all labor, against all capital, and so ultimately against themselves.

And it is particularly unjust towards all food matters, and canned foods especially. The food producers of the world are entitled to every consideration of the rest of mankind, most of all the bankers, who produce nothing, but take their profits from the earnings of all others. Prosperity must always be at its height when the food raiser, who perforce must invest his capital in lands, and seeds and farming implements, and then wait many moths for Nature to produce the crops, when these food raisers can market their crops promptly and get back their investments, to be reinvested in further food operations. If they are to be forced to carry these crops, after having carried the investment during the growing season, until the people eat the crops in small lots; if they are to be forced to wait for the return of their money in driblets, they will not be able to carry on their all-necessary work, and disaster will overtake us. And it is not fair to them. They are entitled to more consideration and to better treatment.

And so it is with the canner who takes these crops from the growers and puts them into cans, where they can be held, in perfect condition, to supply the needs of the people all the year 'round. Why should these benefactors of humanity be made to carry the whole burden until the pleasure of the buyers? Why should not the men handling these products be willing to stand their share of this carrying, at least to the extent of making known the amount of their wants to cover at least a goodly part, if not in fact the whole year, up to next harvest? And why is there a wholesaler if he is not to wholesale?

The public has a right to complain of the middle man and the profit he takes on the goods, if he merely takes them from the manufacturer or producer and hands them to the consumer. But if he gathers these products in a wholesale way, and stores them in his warehouses against the needs of his customers, then he is entitled to pay for his service, and the world will not begrudge him it.

The chain store, we know, does not buy in wholesale lots, but only in small quantities to cover immediate wants, and the wholesaler says that this being so neither can he afford to buy largely, carry the goods and compete with the chain-store. The wholesaler berates the chain-store and is fearful of this competition, but if he could see through a ladder he would realize that in this very act the chain-store lays itself open to annihilation. The chain-store could no more operate without canned foods than could any other grocery; they are an absolute necessity to him. If, therefore, the wholesale grocers bought their year's requirements in canned foods, in less than no time they would leave the chain-stores without a supply. This is not visionary. When the big meat packers get back into the business of canned foods distribution they will buy in these huge amounts, and they will leave the wholesaler stranded, just as they often did before, and the chain stores and the wholesalers will have to buy their full requirements if they want anything but the culls and leavings. There will be no hand-to-mouth buying of canned foods when these business men begin again to operate. And they will soon again be back in the game. But why wait for that? Why cannot the wholesaler see how to play the game and put the chain-store on the defensive?

Why? Because they do not want to. When the Concent decree was signed they held a little love-feast with their hated enemies, the chain-stores, as they did when the flat allowance on spoiled canned foods was hottest.

They owe this consideration to the growers and to the canners, but the American, in his quest for dollars, has never been thoughtful of the future. He'd kill the goose that lays the golden eggs, and he'd eat the eggs rather than set one of them to hatch another goose; and he is doing it now in this hand-to-mouth buying.

THE FILTER

for

Vinegar– Sweet Liquors– Syrups–

Flavoring Extracts– etc.

This is the filter that transforms cloudy, misty products into beautiful, sparkling-clear liquids.

It is of good capacity, simple to prepare, and made ready for use in ten minutes.

Lined with pure copper, heavily tinned with pure block tin.

For use by gravity or with pump. We also make pumps for this purpose and for general service.

Conference on Pea Growing at Madison

Experts on Pea Growing Confer at Madison, Wisconsin—Better Seed and Disease Troubles Considered—The New "Horal" Pea Resistant to Root-rot—Work to Combat the Aphis.

MANY interesting facts in regard to new varieties, pea diseases and insects and their control, and the tests for better fertilizers were brought to light at the Conference for Project Leaders and Others Associated with Canners' Problems, held at the Wisconsin College of Agriculture, Madison, Wisconsin, May 28.

R. A. Moore, veteran pedigreed seed breeder of the college, spoke about the breeding work that was being done on peas. He said that this work had been in progress for the last 15 or 16 years. The object has been to get a pea that would be uniform in blossoming, pod production and ripening. Weevil trouble at the Madison station caused the removal of the work to the Ashland station, where the work has since been in the hands of E. J. Delwiche.

One of Professor Delwiche's latest discoveries at the northern station is the hybridized pea, called the Toral. This was secured by crossing the Horsford and the Alaska. The new pea is resistant to root-rot, high in yielding power, but so far has not been fully tried out for canning purposes. It is now in the hands of a group of canning companies, and will be given more extensive trials this season. Altogether about 130 bushels of the Horal peas will be planted this year, and the crop will be carefully harvested in order to save the product for planting next year. As time goes on and the supply increases, each year more and more of the variety will be used for canning.

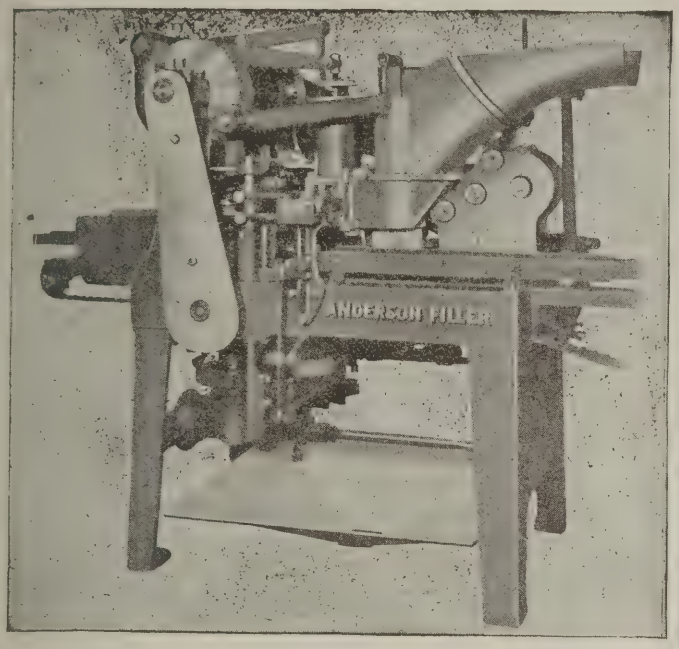
Mr. Moore is very optimistic about Wisconsin's opportunity to produce seed peas. He feels that the state can produce seed peas just as well as the western states.

Aphis Week—J. E. Dudley, of the United States Department of Agriculture, who has been doing cooperative work on eradication of the pea aphis, explained the work of the past, and told what they were doing this year in an attempt to find the most effective means of exterminating this pest. He claimed that the aphidozer used last year collected as high as 86 per cent of the insects. The work being done this year is along two lines. First, the actual control with aphidozer and insecticides, and second, a study of the biology and ecology of the pea aphis will be made. An effort to find the most economical dusts for control is being continued this year. Trials of this sort are to be carried on in several of the states. The workers want to find out in what sections of the country the pea aphis is serious, where it can be controlled, and where its natural enemies are the most numerous, in order to determine if it is possible to predict the likelihood of aphis injury.

In greenhouse tests Dudley said that the Admiral pea proved to be quite resistant to the aphis, while the Alaskas and varieties of sweets other than Admiral were not so resistant.

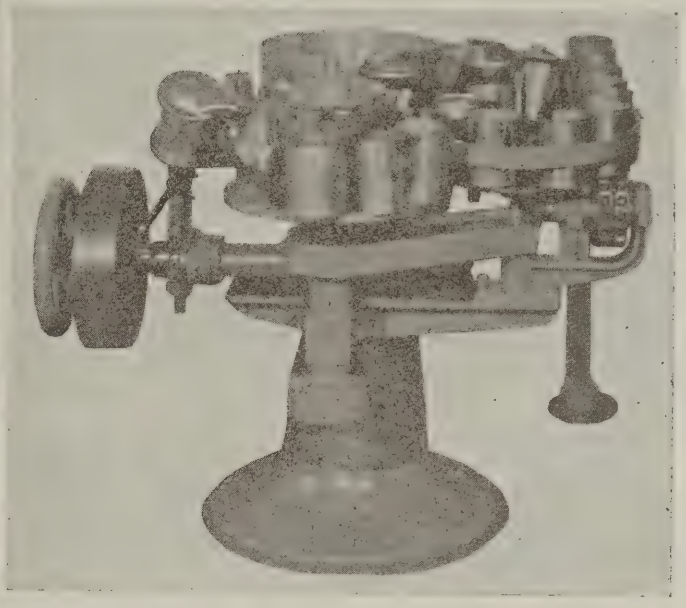
Among the natural enemies of the pea aphis are the lady bird beetles, syrphid flies, internal parasites had fungus diseases. Just whether the ravages of the pea aphis has an effect on the quality as well as the yield will be determined experimentally by Dudley and his assistants this year. Three acres of peas constitute the experimental plots in use at Columbia, Wisconsin, this season. Both Alaskas and sweets will be used in three different ways. One-half acre of each will be infested, one-half acre of each kept uninfested, and one-half acre of each left untouched. The total yield received from each plot under the different treatments will be recorded and a certain percentage canned and tested for damage to quality.

Dudley reports that they were able to save 90 per cent of the predators, such as the lady bird beetles, which became captives along with the aphids when the aphidoder was used as a means of control. The predators were returned to the field, where they could resume their inroads on the aphids. He also reports that it was found last year that blackbirds are natural enemies of the pea aphis, eating the insects in large numbers.



That the experimental work on fertilizers for peas is very difficult to carry on was the opinion expressed by A. R. Whitson. He gave three reasons for the difficulty. They are (1) different stages of harvesting; (2) the succulent nature of the plant, and (3) while good results may be gotten on one piece of ground by the use of phosphorus or some other fertilizer, this does not indicate that like results will be obtained on other plots. A few days difference in harvesting results in a great variation in resulting yields from plots.

Whitson explained that peas use considerable potash. He said that manure contains a high proportion of potash, so is a good fertilizer to use for peas. He reported that letters had been sent out to pea growers by W. E. Nicholoy, secretary of the Wisconsin Canners Association, advising the use of phosphate fertilizers.



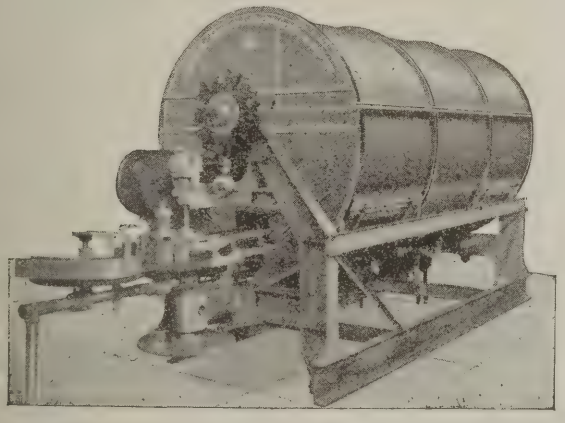
Not much experimental work on the use of fertilizers for peas is being done in the state this year, because of a shortage of help on the state soils staff, which made it impossible to place anyone on this kind of a proposition. However, H. L. Musbach is carrying on experiments at three places in the upper part of the state.

Root-Rot—Dr. F. R. Jones, of the Bureau of Plant Industry, introduced the subject of the pea root-rot survey for 1924. He explained that the root-rot is a fungus disease which causes the roots and lower stems to shrivel up. According to Jones, crop rotation will continue to be the important control. A preliminary survey indicates that the fungus may be present in all localities, and that it develops rapidly with the intensive culture of peas. Root-rot seems to spread more readily in soils that are retentive of moisture. Over 30 canning companies have subscribed a fund which will be used to cover the expenses of M. B. Linford and some assistants, who will go with the field agents of those companies into their pea fields to aid them in discovering root-rot in its early beginning, before it has caused much damage, and advise with them re-

TOMATOES AND KRAUT

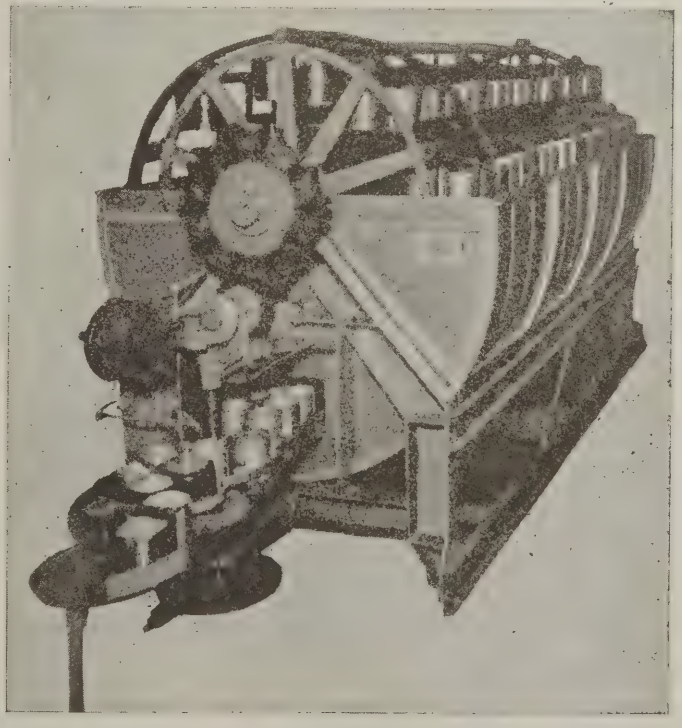
THE FILLER

THE SYRUPER



CANNERS—

We now can Lease you a complete line of machinery that will save you money and produce quality goods. Tried and proven for the past several years. Fillers fill tomatoes or kraut at 50 to 100 cans per minute——every can same weight. The syruper or briner has no valves. Fills every can alike and nothing to clog up.



The Rotary Exhaust gives you the long, low exhaust at high speed.

The Cooker is non-agitating and will give you perfect sterilization without breaking down the tomatoes. They cut out whole. Kraut, sterilized perfectly.

THE LONG, LOW EXHAUSTER

THE NON-AGITATING COOKER

A complete line leased at such a nominal figure you can't afford to lose the savings and quality.

WILL SEND FULL PARTICULARS ON REQUEST.

ANDERSON FILLING MACHINE CO.

WEBSTER ST., JUNCTION, ALAMEDA, CAL.

garding the future use of such infested land for pea growing. Nearly 12,000 acres of peas will be inspected this season. It is anticipated that this service will not only be of considerable value to the subscribing companies, but that through this survey new phases of the problem will be found, especially the relation of soil types and drainage to the severity of the disease and the length of rotation necessary to prevent injury from it. Mr. Linford will work upon such problems during the winter.

Inoculation—A plan to get a general distribution of pea inoculation this year is being followed by the University of Wisconsin agricultural bacteriology department, under the direction of Dr. A. L. Whiting. Some of the inoculation is done by the experiment station, some by the canners and some by the growers. Whiting reported that between 11,000 and 12,000 acres of peas enter into the projects under way this season. In all 34 companies are using pea inoculation, the main stations being at Cobb, Temple and Gillette. In Portage county some experiments are being made by the county agent.

Whiting stated that good seed peas on which inoculation has been used are being grown at Fond du Lac, Beaver Dam, Lake Mills and Ashland.

Large quantities of liquid inoculation were sent out this spring to factories where a large amount of inoculation was to be used. In quite a few places Whiting says commercial cultures will be tested out beside the agricultural college cultures.

Whether there might not be some decided advantage in repeating inoculation was the question raised by Dr. K. F. Kellerman, of the Bureau of Plant Industry. Dr. E. B. Fred, of the Wisconsin College of Agriculture, replied that in the case of one soil type which had peas on it for 20 years inoculation of the seed doubled the crop.

Prof. R. L. Jones summarized the work of the conference and stated that it was 14 years ago when he was first called to Columbus by the Columbus Canning Company to investigate pea diseases. He said that the conference was the best balanced of any he had ever attended, in that every phase of the pea situation had been touched, experiment station, government and commercial interests being represented.

W. E. Nicholoy, secretary of the Wisconsin Canners Association, expressed appreciation of the efforts of the college to help the pea canners with their problem. He pledged greater co-operation on the part of the pea canners in any work the college and experiment station might want to do to solve their problems. He praised the Canners' Short Course last December as one of the best agencies for getting the canners themselves to see what was being done for them by the college and experiment station.

Dr. C. G. Woodbury, director of the Raw Products Research Bureau of the National Canners Association, also expressed his appreciation of the co-operation manifested in the conference.

The conference was presided over by R. E. Vaughan, of the plant pathology department of the University of Wisconsin. Others present besides those already mentioned included Dean H. L. Russell and C. L. Fluke, entomologist of the Wisconsin College of Agriculture.

Plans for a field day late in June were discussed by those present at the conference. On this occasion observations on root-rot, pea aphis and inoculation experiments will be made.

AS THE CROPS NOW APPEAR.

Rochester, N. Y., June 6, 1924.

My Dear Judge:

Replying to your letter of June 3rd, our weather conditions here have been very bad, and have seriously delayed the planting both of peas and corn. The season throughout the state is from ten days to two weeks late. According to my best advice, all of our contracted pea acreage, with the possible exception of a few hundred acres, has been planted, and such peas as are up are doing very well. although of course in many sections these are very backward. It is felt, however, that the late planting will cut down the yield considerably.

The prospects for cherries are very promising, while Baldwin apples do not look very well, although Greenings are quite satisfactory.

You may be interested to have the final statistics for the prospective acreage of our main vegetable crops. These are 36,353 acres for peas; 23,191 acres for corn; 12,276 acres for tomatoes, and 6,132 acres for green and wax beans. You will note that the acreages given for peas and tomatoes are considerably lower than the estimates of the U. S. Government, whose figures are based to a too great extent on guesswork and averages.

While our pea acreage was increased this year about 4,000 acres, it is our belief that because of the weather conditions and late planting New York's pea pack this season will not exceed that of last year.

Cordially yours,
JOHN P. STREET,
Secretary.

Crop Potentialities in Maryland and Delaware on June 1, 1924.

Rain! And more rain!

Our frog remarks he'd rather be a toad and liv on the vapors of a cellar than to dwell longer in th open unless someone shuts off the incessant drip.

Fields are water-soaked. Roads muddy.

There's no disguising the fact that the farmer are pessimistic. Dry weather would go a long way t rehabilitate their courage.

No little apprehension is felt concerning the out look. Three weeks behind in their work; plowing an planting not more than half accomplished in som portions of these States. That's the story briefly.

The cry is for sunshine, and more sunshine.

The continued hot weather has made insects ver bad. Caterpillars reported chewing up the leaves o the apple trees. So many insects never known befor is the way the farmers put it. Sussex county, Del. reports all vine and garden crops nearly destroyed b the hordes of insects; great damage being done t sweet potato plants. Wheat fields condition irregular spotty; many good fields abutting many poor ones Some hardly worth cutting. Highlands crops mostl good. Lowlands show bad color and choked wit weeds. Fly doing some damage. Wheat headed i the southern and central counties. Production thi

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

Southern Can Company

Baltimore, - - Maryland

NEW YORK OFFICE: 17 Battery Place.

Manufacturer of newly developed "SOCOCAN" especially adapted for Coffee, Peanut Butter, Lard Substitutes, etc.
Write for samples and detailed information

SPENDING WISELY

Spending money wisely has as much to do with success as any other factor in business.

Wise spending is investing your money not with the thought of first costs only, but rather of ultimate results.

The thousands of canners who are investing in the "cleaning service" which always follows the use of

Wyandotte Sanitary Cleaner and Cleanser

are getting these ultimate results in dependable sanitation and practical insurance against preventable losses from swells and spoilages.

These factors show up in the profits of the year and carry the conviction that your order to your supply house for this cleaner is an investment well worth repeating.

It cleans clean.

Indian in circle

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

year will be short of last year, due largely to heavy decrease in acreage.

Moderate and desultory planting of corn continues, but not as much as half the acreage has been planted. One of our best correspondents writes that not in forty years has corn planting been so late in his county.

Reports as to hay vary. Fields mostly weedy. Outturn is spoken of as uncertain, but farmers seem to agree that without more rain the hay crop this year will be a whopper compared with that of 1923 season. Some difficulty reported in saving after cutting. In Harford county prospect is somewhat reduced by bad set of timothy and clover. Clover—the scarlet kind—in many counties was never better. Alfalfa, where cut, making good yields. Pastures show up good to excellent.

Much of the rye crop has been cut. Condition good.

Oats planting seriously hampered by the cool, wet weather. Less acreage may result than last year. Where up, oats is doing well.

Barley is making good on a slightly larger acreage.

Tobacco planting checked by the unseasonal weather. Plants are late; setting out has hardly begun. A larger acreage is expected this year. Wildfire reported in beds in Charles and Prince Georges.

Transplanting of tomatoes greatly delayed. Not so many set out yet.

Potatoes only partly planted. On Eastern Shore prospects fair to good. Growing slowly; stands difficult to get; some rotting. Season very backward.

Green peas for canning look good. Podding in southern counties; blooming elsewhere. String beans in Anne Arundel are said to be very poor.

Strawberries ripening under difficulties. On June 2 Maryland was 1,145 carloads behing last year to same date in her shipments. Delaware 500 carloads behind.

Cucumbers, watermelons, canteloupes at least three weeks late. Much replanting necessitated. Stands not good. Prospects only fair.

Farm labor short and inefficient. Industry and public works absorbing labor from the farms at wages the farmers say they cannot pay. On June 1 about 80 men available for farm work for every 100 needed.

Cattle are improving in condition with improved condition of pastures.

Issued June 9, 1924, by John S. Dennee, Agricultural Statistician for United States Department of Agriculture, Division of Crop and Livestock Estimates.

(Note.—The above covers conditions as of June 1, though issued on the 9th. Since then there have been many heavy rains—June 8th a veritable deluge, with severe damage from wind and lightning in all this section.)

Ames, Iowa, June 5th, 1924.

Iowa has experienced the dryest May in upwards of half a century, according to government reports. The rainfall is 65 per cent below normal for the month. It has also been cold, the temperatures averaging 5 degrees below normal for the month.

Considerable of the early planted field corn has rotted, requiring replanting, and the same is true, though probably to a lesser degree, for sweet corn, as it was planted later.

The usual storage of moisture in the soil has not taken place, the effect of which may become apparent in the hot months of July and August.

A. T. ERWIN, Truck Crops Section,
Agricultural Experiment Station.

Indianapolis, Ind., June 4, 1924.

Since our bulletin of May 22nd we have had but two days of sunshine in Indiana, which were May 30 and May 31, United States weather bulletin reports a frost May 30th, the latest on record in Indiana. The last two days there has been a downpour of rain. We have heard of one packer on the Ohio River who has his tomato acreage set about 75 per cent, while those north of Indianapolis, where most of the factories are located, are hardly 25 per cent set, or rather reset, as the freeze caught their first setting.

Corn is in worse shape. Some packers in the southern part of the state are 40 per cent planted, whereas in the northern part of the state packers claim that their acreage will have to be replanted.

Peas are in bloom in several sections of the state with the vines very small and stunted, yet peas are apparently in better shape than any other canning crop by far. Our green bean packers tell us they have not had an opportunity to plant as yet, and this is an eight weeks crop.

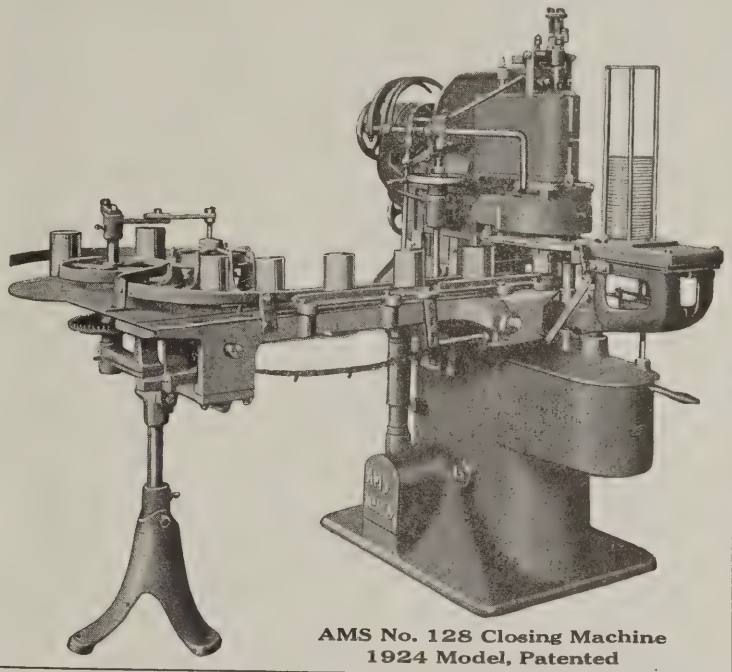
We are entirely sold out of spot No. 2 and No. 3 tins tomatoes, and have been unable to locate a single car or mixed car of same in the state.

Our packers are entirely cleaned up on standard and extra standard corn, excepting one lot of extra standard corn which we think grades extra sweet at $1.05, and one lot of fancy Country Gentleman spot at $1.25. These are our spot stocks, and the pack is three months away. Corn, tomatoes and green beans are over three weeks late. If corn does not get caught it will probably mature in large quantities at a time so that the factories cannot handle it, and there will be waste.

A September frost means very short tomato crop. At the National Wholesale Grocers' convention in Chicago we were told by packers from Wisconsin, Michigan and from buyers in New York and from our Tri-States connections that the same conditions are true in those sections.

We are still shipping tomato plants out of Georgia, but unfortunately will be able to secure but few more, and Mr. Keithly wires us that Utah and Missouri and the Tri-States are also trying to get tomato plants from Georgia.

Now these facts which we are trying to present as we have gathered certainly are worthy of serious consideration by all buyers. There is very little change in our future quotations as given May 22.



BERT C. KEITHLEY CO.

Westover, Md., June 9—It is June 9th and there is hardly any ground broken for the planting of tomatoes. The plants are ready to go in the fields. It has been raining here for the past six weeks every day, and last night we had a regular cloudburst. Water is standing everywhere. It will be at least another week, if it should stop raining, before the farmers can get to work on ground. Our acreage in tomatoes will be cut at least 50 per cent, and if weather continues he will not get any tomatoes planted.

ROBERT A. SINDALL, *President-Treasurer* HARRY R. STANSBURY, *Vice-President*

A Digest of Changes Between The 1921 and 1924 Tax Laws

By *H. Archibald Harris*
Certified Public Accountant

INCOME TAX changes are shown first because they affect most people and concerns, and are classified under "General," "Individual," "Corporations" and "Estates and Trusts." "General" covers changes applying to both corporations and individuals.

The Gift Tax, the Estate Tax and the Miscellaneous Taxes are all covered separately, under their own headings.

Sections used after paragraphs are sections of the new 1924 law, except where otherwise stated.

In order to be brief only bare changes have been shown, with very little comment.

INCOME TAX
GENERAL

Administrative Provisions

If tax not more than $10.00 may be signed before two witnesses instead of under oath.—Section 1002 (c).

Collector may not grant thirty days extension for filing income tax return.—Section 1003.

Request for extensions of time for filing returns must be made before the time fixed by law for filing the return.

Assessment and Collection of Tax—Period of Limitation

Taxes for 1921 and subsequent years must be assessed within four years after return filed. No suit after such four years except in case of fraud.—Section 277 (a) (1).

Tax upon income received during life of a decedent shall be assessed and any proceeding in court for its collection shall be begun within one year after written request therefor (filed after the return is made) by the person representing the estate.—Section 277 (a) (2).

The Period of Limitation may be extended sixty days for assessment of a deficiency if taxpayer does not file appeal with the Board of Tax Appeals or if appeal has been filed, the extension shall be the number of days between the date of the mailing of the notice and the date of final decision by the Board.—Section 277 (c).

Assessment and Final Determination

If tax has been paid without protest or abatement, credit or refund has been accepted and written agreement has been made between the Commissioner and the taxpayer, case shall be closed and not reopened even by suit, excepting in case of fraud or misrepresentation.—Section 1006 (a).

Board of Tax Appeals

Board consists of seven members (for two years after enactment of Act there may be as many as twenty-eight, in the discretion of the President).

Members shall be appointed by the President with advice and consent of Senate.

Terms of all members during first two years shall expire at end of that period.

Salary of members, $7,500.

Hearings before the Board shall be open to the public.

Findings in every case shall be made in writing and shall be published and sold in the same manner as any other public document. A copy shall be furnished the taxpayer.

If the tax in controversy is more than $10,000, the oral testimony shall be reduced to writing and a written opinion shall be given in addition to the finding of facts and the decision.—Section 900.

Claims in Abatement

If a deficiency has been assessed without notice or within 60 days after notice or before the Board has reached decision even though the taxpayer has appealed, then abatement claim may be filed. Bond in twice the amount of the assessment shall be furnished. Commissioner shall by registered mail notify taxpayer of decision on the claim. Taxpayer has sixty days in which to appeal to Board of Tax Appeals. Amount disallowed is collectible on notice and demand. Court proceedings for amount allowed may be begun within one year even though time limit may have expired. Interest 6% on amount disallowed from original notice after final decision, thereafter 12% until paid, except in case of estates of incompetent, deceased or insolvent person, rate is 6%.

No abatement claim may be filed except in the three cases above mentioned.—Section 279.

Credit for Taxes

Same as for 1921, except that the credit may, at the option of the taxpayer and irrespective of the method of accounting employed, be taken in the year in which the foreign taxes accrued; subject, however, to proper adjustment when the tax is finally paid. If taxpayer adopts this basis for claiming the credit, all future years must be handled in same manner.—Section 222 (c) and 238 (c).

Dates on Which Tax Shall Be Paid

Commissioner may grant extension of time for payment of the tax or any installment not to exceed six months.—Section 270 (c) (1).

If extension for payment granted, interest at 6% shall run from original due date of the tax or the installment to date of payment.—Section 270 (c) (2).

No extension possible for payment of tax withheld at source.—Section 270 (d).

Deductions

No loss is allowed on a sale of stock or securities where within thirty days before or after the sale substantially identical property was purchased or contracted for. New Act does not say sale must be after passage of this act as in 1921 Act.

Deficiency in Tax

Taxpayer has sixty days in which to appeal to Board of Tax Appeal instead of thirty days as in 1921 Act.—Section 274 (a).

After appeal is considered by Board of Appeals, assessment shall be made and tax shall be paid on notice and demand. Assessment shall not be made of any part of a deficiency found by the Commissioner, but disallowed by the Board. But suit may be started without assessment. Court shall allow interest at 6%. Such suits shall be begun within one year after final decision of the Board.—Section 274 (b).

If no appeal is filed in the sixty-day period, the deficiency shall be assessed and shall be payable upon notice and demand.—Section 274 (c).

If Commissioner believes delay dangerous, he shall assess the deficiency immediately. In such case assessment may be made without notice or before the sixty-day period has expired or before final decision of the Board. If such assessment is made and no claim in abatement is filed, the deficiency shall be paid upon notice and demand.—Section 274 (d).

If deficiency not paid in accordance with terms of extension, interest at 1% a month shall run from the time the tax was due under the extension to its payment.—Section 274 (g).

No 1% a month interest for negligence as in 1921. Only 5% flat.—Section 275 (a).

Delinquency—Additions to the Tax in Case of—

Where tax computed by the taxpayer is not paid at prescribed time it bears interest at 1% a month instead of 5% plus 1% a month from notice and demand as under 1921.—Section 276 (a) (1).

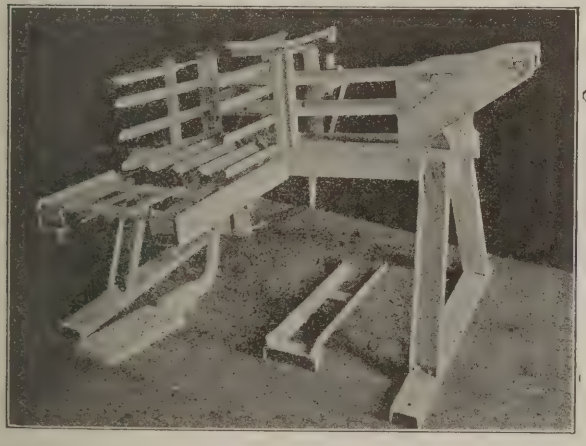
If extension of time for payment is granted and tax or interest thereon is not paid in full before the expiration of the extension, then instead of 6% interest shall be 12%.—Section 276 (a) (2).

Where a deficiency or interest or penalties are not paid within ten days after notice and demand, interest runs at 1% a month from time of the notice and demand. (No 5% as in 1921.) If deficiency allocated to installments is not paid when installment is due, interest runs from date of installment.—Section 276 (b) (5).

Estate of incompetents, deceased or insolvent persons shall pay interest at 6% in lieu of 12%.—Section 276 (c).

If claim in abatement is filed, interest provided by Section 276 shall not apply.—Section 276 (d).

Dividends—Liquidating



In case a corporation pays a partial liquidating dividend, it shall not claim that its earnings were taken up by the non-taxable part of such liquidating dividends, and reduced for the pur-

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

pose of determining the taxability of future distribution of the company.

Amounts distributed in partial liquidation are defined as a distribution by a corporation in complete cancellation or redemption of a part of its stock or one of a series of distributions in complete cancellation or redemption of all or a portion of its stock—Section 201 (g).

Dividends—Taxable Date

The 1924 Act does not specify the date at which a dividend is taxable. This was Section 201 (e) of the 1921 Act and was put in as the result of much discussion over the old law.

Gains or Loss from Sales and Exchanges, Recognition of—

1924 Law has not the provision of the 1921 law, for cases in which property received in an exchange has no readily realizable market value.—Section 203.

No gain or loss if stock or securities in a corporation a party for productive use in trade or business or for investments (with same exceptions as in 1921) except that in 1924 Act if common stock in a corporation is exchanged solely for common stock or preferred is exchanged solely for preferred stock of same corporation no gain or no loss.—Section 203 (b) (1).

No gain or los if stock or securities in a corporation a party to a reorganization are in the reorganization exchanged solely for stock or securities in any corporation a party to the reorganization.—Section 203 (b) (2).

(Old law provided for no gain or loss when in a reorganization a person received such stock or securities in exchange for "any stock or securities owned by him.")

No gain, no loss on transfers of property by any person or persons to a corporation solely in exchange for stock or securities of the corporation if same person or persons are in control immediately after the transfer (Control same as in 1921 Act.)—Section 203 (b) (4).

If property described in 203 (b) (1) (2) or (4) just above is received together with money or property of another nature, then gain is recognized, but not to exceed the sum of the money and the fair market value of such other property described in 203 (b) (1) (2) or (4).—Section 203 (d) (1).

No gain to a shareholder who in a reorganization does not surrender his old stock, but receives stock or securities of any corporation a party to the reorganization.—Section 203 (c).

In all the foregoing cases of mixed property no loss shall be recognized even though a gain may be recognized.—Section 203 (f).

The new law prohibits a corporation from claiming that a distribution (in pursuance of a plan of reorganization) of its stock was a distribution of earnings available for future distribution and does not allow such distribution to be considered in determining the taxability of such future distributions.—Section 203 (g).

Gain or Loss, Depletion and Depreciation—Basis for Determining

If property acquired after 12/31/20 by transfer in trust (not including a trust by bequest or devise) is sold, basis is same value as would have been used by grantor, proper adjustments being made for any gain or loss recognized when the transfer was made.—Section 203 (a) (3).

This value is not to be used in determining gain or loss on trust property transferred during life by an individual under such conditions as rendered the property subject to estate tax at the time of the grantor's death or on the sale of property passing under a general power or appointment by a decedent whether by will or by deed executed in contemplation of death.—Section (a) (3).

In the case of a sale of property received in exchange which would be wholly or partially exempt under this law, the basis shall be the cost or 3/1/13 value of the old property with proper adjustments for any gain or loss accounted for at the time of the exchange.—Section 204 (a) (6).

Bases are (1) cost, (2) bases outlined above or (3) March 1, 1913, value (Basis No. 2 is new). In determining March 1, 1913, value of stock due regard shall be given to the fair market value of the assets of the corporation.—Section 203 (b).

Basis for depletion, depreciation or obsolescence same as basis for determining gain or loss except that depletion in the case of mines, oil or gas wells may be in certain cases based on discovery value.—Section 204 (c).

(1921 methods of determining gain or loss on sale of property owned on 3/1/13 omitted).

Interest on Refunds and Credits

Interest at 6% to taxpayer on refunds, credits and penalties illegally assessed runs from date such tax penalty or sum was paid to date of refunds, or in case of credit, to due date of the amount against which the credit is allowed unless such amount is an additional assessment, then to the date of the assessment of that amount.—Section 1019.

Losses, Net

A net loss shown by a return for a fractional part of a year may be carried forward to the next year or two under 1924 law. Rulings under previous laws allowed only net losses sustained in a full twelve-month period.

It looks as if this action of Congress may lead the Treasury Department to reverse its rulings for prior years and allow net losses for a fractional part of a year.—Section 200 (a) (1).

In computing a net loss a taxpayer uses all deductions connected with his trade or business plus any deductions allowed on his income tax return and not connected with his trade or business to the extent of gross income not derived from such trade or business.—Section 206 (a) (1).

In determining net loss deduction for depletion shall not exceed the amount which would be allowed if computed without reference to discovery value.—Section 206 (a) (3).

"Gross income" for net loss purposes includes all tax-free interest received less the amount of interest pair or accrued and losses sustained and not allowed as a deduction from gross income.—Section 206 (a).

Net losses for 1922 are to be handled under the 1921 Act.—Section 206 (e).

Net losses for 1923 are to be determined under 1921 Act, but applied to 1924-1925 income according to 1924 Act.—Section 206 (f).

In case of a fiscal year beginning and ending in calendar years having different laws and net loss for such fiscal year shall be the sum of the proportionate part of a net loss computed under each law which corresponds to the part of the fiscal year falling in each calendar year.—Section 206 (g).

Limitation on Assessments and Suits by the United States

With a few exceptions internal revenue taxes shall be assessed within four years after they become due, and any suit for their collection must be brought within five years after they become due.—Section 1009 (a).

In case of fraud, or a failure to file a required return or of a wilful attempt to evade tax, assessment may be made or a suit for collection may be begun without assessment, at any time.—Section 1009 (b).

Where assessments made in time suit may be begun within six years after assessment.—Section 1009 (c).

Limitations on Prosecutions

Limitation on prosecutions for defrauding or attempting to defraud the United States shall be six years.—Section 1010 (a).

Limitation for Suits and Proceedings by Taxpayers

Suit for a recovery of taxes or penalty may be brought whether or not such taxes or penalty was paid under protest or duress.—Section 1014 (a).

Any taxpayer who has been charged with fraud for any year between 1916 and 1921, both inclusive, may now reopen claim for refund or credit for any of those years which were disallowed because the taxpayer failed to come clear of the fraud charge.—Section 1015.

Penalties

Penalty for willful failure to pay or make return, $10,000 or imprisonment not more than one year or both—Section 1017 (a).

For willful failure to collect and pay over tax or willful evasion of tax, $10,000 or imprisonment not more than five years or both.—Section 1017 (b).

For willful aid or assistance in preparing false or fraudulent return affidavit or statement, $10,000 or five years or both.—Section 1017 (c).

For willful failure to pay or collect or to account for and pay over any taxes (other than income, estate or gift taxes) or for willful attempt to evade payment of such taxes shall be in addition to other penalties, 100 per cent. of the tax evaded.—Section 1017 (d).

Reduction of Income Tax Payable in 1924

1923 taxes reduced 25% for all taxpayers other than corporations.—Section 1200 (a).

If entire 1923 tax has been paid, 25% shall be credited or refunded.—Section 1200 (b).

If tax being paid in installments, the 25% shall be allocated to the four installments. The amount prorated to any installment not yet due shall be used to reduce such installment.

The amount prorated to any installment past due shall be used as a credit against the installment next falling due.—Section 1200 (c).

Provision is made for credit in case taxpayer has an extension of time for payment.—Section 1200 (d).

Provisions are also made for adjustment of deficiencies and overpayment.—Section 1200 (e), (f), (g).

Credit provided for 25% of that part of fiscal year (1923 or 1924) tax applicable to calendar year 1923.—Section 1201 (a).

VIRGINIA CANS

ROANOKE, - VIRGINIA

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS
at
WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

LANSIN B. WARNER, INCORPORATED
155 E. Superior Street,
Chicago, Illinois.

Twenty-five per cent credit allowed for part of year 1923 if return covers fractional part of year.—Section 1202.

Refunds and Credits—

Claim must be filed within four after tax was paid instead of five years after return due as in 1921. The credit or refund shall not exceed the tax paid during the four years immediately preceding the filing of the claim, or if no claim was filed, then during the four years immediately preceding the allowance of the credit or refund.—Section 281 (b).

If 1917 or 1918 waivers filed, claim may be filed at any time before April 1, 1925, or within four years from the time the tax was paid.—Section 281 (e).

Any claims now on file are valid and claims for 1919 or 1920 may be allowed if claim is filed before five years after return was due.—Section 281 (f).

Returns—False or Fraudulent

In case of false or fraudulent returns or failure to file a return, tax may be assessed or court action may be brought at any time.—Section 278 (a).

Any deficiency due to a change in an amotization deduction under either 1918 or 1921 Act may be assessed or a proceeding in court without assessment may be begun at any time.—Section 278 (b).

Where assessment made in time provided by law, such tax may be collected by distraint or proceedings in court begun within six years after assessment. Court action may be begun without assessment at any time before the expiration of the Statute of Limitations.—Section 278 (d).

Returns to Be Made Public Records

If the Ways and Means Committee of the House, the Senate, Finance Committee or a Special Committee or either House of Congress calls upon the Secretary of the Treasury for any income tax returns, it shall be his duty to give such committee all data contained in or shown by such returns.

Proper officers of a State may upon request of its governor have access to the returns of any corporation (not any other taxpayer) even though such state does not impose an income tax law.

Commissioner may add to the public list of taxpayers' names and addresses kept in the Collector's offices the amount of tax paid by every taxpayer.

INDIVIDUALS

Caiptal Gains and Losses

Definition capital loss same as 1921 Act, except does not specify sale or exchange shall have been consummated since 12/31/21.

"Ordinary deductions" defined as all deductions under Section 214, except capital deductions.

Capital net gain is the excess of capital gain over sum of capital deductions and capital losses plus (a) any excess of ordinary deductions over gross income not including capital gain. (a) is new.

"Capital net loss" means the excess of the sum of the capital losses plus capital deductions over the amount of capital gains.—Section 208 (a) (5).

Under the new law it appears that property held for personal use may be a "capital asset" under this section. The 1924 Act precludes property held primarily for sale in the course of the taxpayer's trade or business from being considered "capital assets."—Section 208 (a) (7).

Taxpayers other than corporations are allowed capital losses only to the extent of capital gains.—Section 206 (a) (2).

Credits Allowed for Normal Tax Purposes

Dividends paid by a corporation organized under the China Trade Act are not allowed as credit for normal tax purposes as are other dividends.—Section 216 (a).

Married person or head of family—$2,500.

Personal exemption allowed United States citizens or residents—$1,000 or $2.500—shall, if status of taxpayer changes during year, be changed also. If he was single four months and married eight months, he has one-third of $1,000 plus two-thirds of $2,500. The month in which the change occurred shall be counted according to which status occupied the greater portion of the month.—Section 216 (f) (2).

Deductions

Contributions by individuals to fraternal societies, etc., operating under a lodge system or to a trust shall be allowed as deductions if the contributions are used for religious, scientific, educational or other named purposes.

Deductions shall not ordinarily exceed 15% of the net income, but if in the taxable year and in each of the ten preceding years the amount of contributions combined exceeds 90% of the taxpayer's net income for each year, then the full amount of such contributions shall be allowed.—Section 214 (a) (10).

Earned Income

Earned income is any compensation for services actually rendered—does not include amounts received by a stockholder of a corporation which represent distribution of profits rather than compensation for services.

Where a taxpayer is engaged in a trade or business and both personal services and capital are material income-producing factors a reasonable allowance as compensation for the services of the taxpayer shall be considered earned income, such "earned income," however, not to exceed 20% of his share of the net profits of the trade or business.—Section 209 (a) (1).

"Earned income deductions" means any deductions under Section 214 properly allocable to earned income.—Section 209 (a) (2).

"Earned net income" excess of earned income over earned income deductions.

If taxpayer's net income from all sources is not more than $5,000 it shall be considered earned net income.

If the net income is more than $5,000, at least $5,000 of it shall be treated as earned net income.

Earned net income shall never be more than $10,000.—Section 209 (a) (3).

An individual shall receive as a credit against his normal tax 25% of the amount of the tax computed on his earned income at regular rates. Such credit shall in no case be more than 25% of his normal tax.—Section 209 (b).

The method of handling partnership earned income is put up to the Commissioner who is authorized to draft regulations.—Section 209 (c).

Fiscal Years of Partnership

Partnership has a fiscal year. If the law in first part of fiscal year is different from the law in the second part, the partnership shall compute its income under the laws applicable to both. The partners shall report that proportion of the income computed in each year which corresponds to the number of months in each calendar year falling within such fiscal year.

Partnership income taxable at rates for the second year shall be added to the other income for the second year, and the total placed in the lower brackets for such year. The part of such income subject to the rates for the preceding calendar year shall be placed in the next higher brackets of the rate schedule applicable to that year. (This shall be included in the taxpayer's income return for the calendar year during which the fiscal year of the partnership ends.)—Section 207 (b).

Gain or Loss

If in a reorganization money or other property is received together with the stock of a corporation, a party to the reorganization so that gain or loss may result (Section 203 (d) (1)), any part of the gain covered by earnings or profits accumulated since 2/28/13 shall be taxed at surtax rates only; any gain not covered by such earnings or profits shall be subject to both normal and surtax.—Section 203 (d) (2).

Income—Gross

A person having tax-free securities must submit with his return a statement showing the number and amount of such obligations and the interest received.—Section 213 (b) (4).

Provision is made for refund to states or municipalities of tax paid by public utilities on income accruing to the state or municipality.—Section 213 (b) (7).

Payments under the World War Veterans Act, 1924, are exempt, also State Pensions. (This last provision does not appear to be necessarily a war pension.)—Section 213 (b) (9).

In order that an exemption of $300 income per year be allowable, the domestic building and loan association shall be one "substantially all of the business of which is confined to making loans to members" instead of one which is operated exclusively for such purposes as under 1921 Act.—Section 213 (b) (10).

If a citizen of China, residing therein, receives dividends from a corporation organized under the China Trade Act, 1922, the stock of the corporation being in good faith vested in him, such dividends are exempt from surtax.—Section 213 (b) (13).

Net Losses

If a taxpayer other than a corporation has in the second year a capital net gain, the net loss of the prior year shall first be used as a deduction in computing income for such "second year." If such net loss exceeds the ordinary net income, such excess shall be applied against the capital net gain for such year, and any excess loss shall be carried over to the "third year."—Section 206 (c) (2).

A capital net gain in the "third year" is handled by a taxpayer other than a corporation in the same manner as in the "second year."

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek Kewaunee, Wisconsin

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

WHAT THE BROKERS SAY

Wausau, Wis., June 7, 1924.

Gentlemen: Weather conditions have been much more favorable for the pea crop during the past week. We have had a full week—the first one this season—without rain interfering with seeding. It has been warmer, although still unseasonably cool, so that the earlier plantings are growing nicely. Some canners have completed their plantings, although most of them will be seeding another week, and many of them two weeks or more.

This will bring us up to the time when packing ordinarily begins. Everything depends on the weather from now on. The usual hot spell early in July will simply raise——you know what I mean.

The revived interest in future peas, which we reported two weeks ago, still continues. Nothing big, but there is a little business every day. We can give you confirmation on either straight cars or most any assortment you want. Send us your orders. We will do the rest. GROCERS SUPPLY CO.

Milwaukee, Wis., June 7, 1924.

We have had occasion to examine a great many pea fields the past week, and these examinations bear out the predictions made earlier in the year—that the cold rains and cold weather encountered during the planting season would have a serious effect on the yield.

Several of the fields examined were planted during the period of April 18th to 25th, and we found that these peas had grown to a height of six inches, have a very unhealthy color and practically no roots. These vines, although only six inches high, are ready to bloom, and will do so the first few warm days we have. The vines in these fields will produce as an average not over three pods, whereas they should produce five to seven pods.

The later plantings show a decided improvement over the earlier ones, and from the present outlook will produce larger yields.

After another two weeks have passed we will be able to tell more definitely what is going to happen to the pea crop—the weather during that time will be the determining factor.

Offerings of future peas are limited, canners as a whole being willing to pass up business until they can tell something more definite about the crop.

FRANK A. INBUSCH CO.

Columbus, Ohio, June 9, 1924.

The writer's frequent prediction that spot standard corn would reach $1.05 to $1.10 per dozen before the end of June has practically come to pass. Today there is but one lot of 3,300 cases of standard corn in factory hands in the State of Ohio, and this is held at $1.10 per dozen, option of labels. We have knowledge of three small straggling lots of extra standard quality totaling below 4,000 cases at $1.10 per dozen. This is the situation in the State of Ohio, and it is equally true of other corn-packing States, with the exception of Maryland, which holds several thousand cases of so-called standard corn, but which evidently is not of a satisfactory nature to Eastern buyers, as they are continually seeking to purchase in the Middle West even at higher prices.

There will be no early packed or early shipments of new pack corn this year from any section, due to the continued unseasonable weather right up to today. Canners everywhere are scrambling for seed corn with which to replant the acreage under contract, and it is almost impossible to secure same. Thousands of acres over the country must be replanted, as the early planting has failed to germinate from unseasonable weather conditions. The maturing of corn this season will be at a critical period when frosts will more than likely seriously injure same. I am of the opinion that many acres of land intended for sweet corn will now be used for other purposes, due to the scarcity of seed and the lateness in replanting; the risk is too great to the grower. June 1st of this year was next to the coldest day of that date in this section for the past 30 years or more. During May we had rain 24 out of 31 days.

You merchants who have not covered your wants on all grades of future corn take warning and buy freely at this time and at present prices. You will probably get short deliveries anyway. Don't hold back looking for lower prices during the canning season. The market will be as bare of corn at that time that there will be a clamoring for shipments, and price will not "cut any figure." Today we can get several of our factories who have not been heavy sellers to book limited quantities

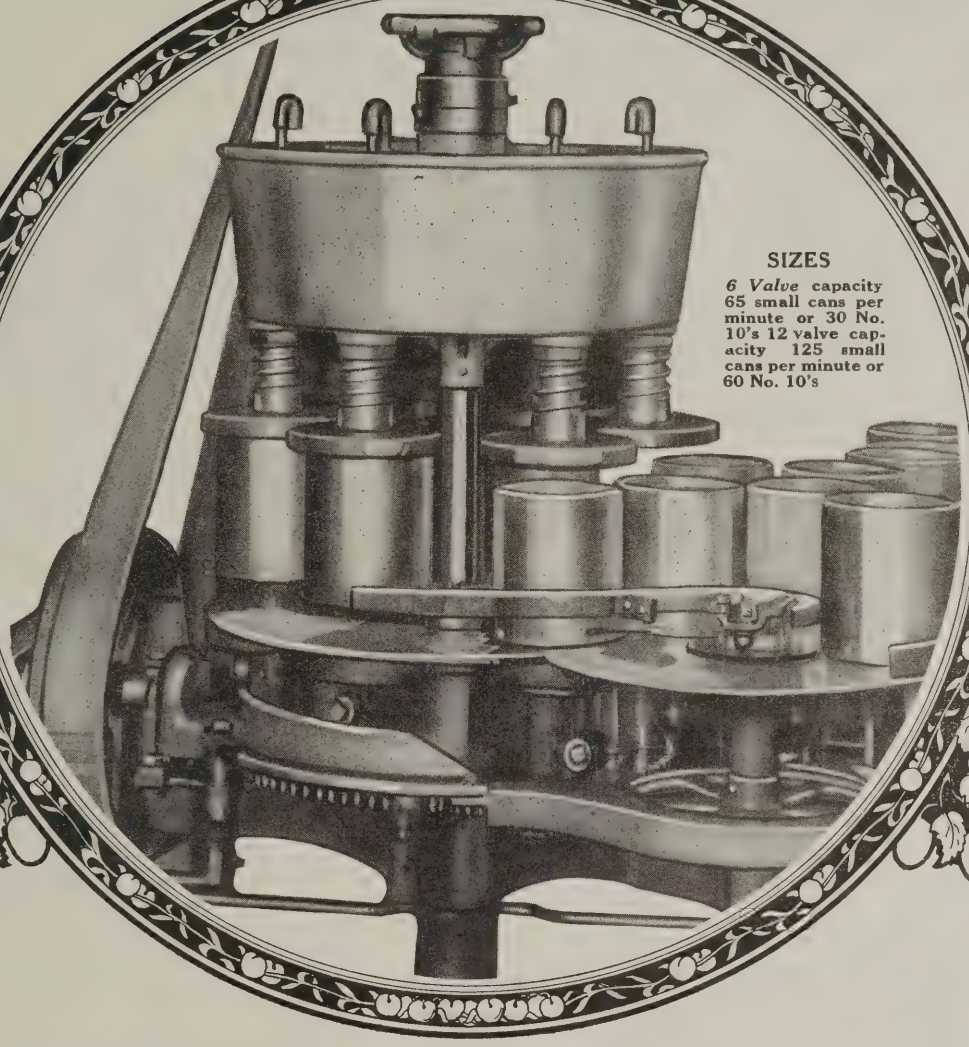
Full Standard Sweetened Corn	$ .90
Extra Standard, well sweetened	1.00
Extra Standard Country Gentleman	1.10
Fancy Country Gentleman	1.25

but in no instance will they take on the quantity that they would have confirmed two or three weeks ago. Those who have sold futures have double worries.

The same story is equally applicable to tomatoes and peas. Thousands of acres of tomato plants already set over the country were absolutely destroyed by the freeze of two weeks ago. And in many sections of the country the pea situation is equally as bad as corn. F. L. DUTTON CO.

Baltimore, June 11, 1924.

So far during the month of June, in this section, we have been enjoying real October weather—cool, rainy, cloudy—which has made the early crops—peas and stringless beans—two to three weeks late. Baltimore canners do not anticipate packing nearby peas until the end of this month, and country canners will start in about ten days. This time last year the pea-packing season was about over. Baltimore canners do not expect to start packing stringless beans until about July 10th, and last year this time the season was well on. And with all the crops so far being backward, it stands to reason that corn and tomatoes also will be late, and should early frost come on, the pack will be very much curtailed. Yet, with all these facts staring jobbers in the face, and with short stocks of almost all "spot" commodities, they are reluctant in purchasing either spots or futures. Take, for instance, No. 2 standard tomatoes: Less than three cars yet unsold in Baltimore, and the market during the past month has advanced from 95c to $1.15, with the indication pointing to a $1.25 market before these three cars mentioned herewith are sold. No. 3s are taking on new life. Lookout for a $1.50 market. No. 1s and 10s also will come into their own.



HOWARD E. JONES & CO.

AVERAGE PRICES PAID PENNSYLVANIA FARMERS ON MAY 1, DURING LAST THREE YEARS.

Prices received by Pennsylvania farmers for their products on May 1 of this year, as compared with average prices for the same crops on the corresponding date in 1923 and 1922, were announced by Frank P. Willits, Secretary of the Pennsylvania Department of Agriculture.

While the average price paid for wheat was $1.11, the variation ranged from $1.41 per bushel in Susquehanna county to $1.00 in Mifflin, Perry and Fulton counties. Corn prices ran from $1.12 per bushel in Carbon and Lackawanna counties to $.73 in Erie and Venango counties. Hay showed a wide range in prices, extending from $32.00 in Carbon to $20.00 in Wyoming county.

Peerless Syrupers Won't Jam Fruit or Cans.

Because Peerless Syrupers are equipped with the famous patented Peerless non-bruising, non-clogging valve. They are guaranteed not to crush nor injure the tenderest fruit you may pack — and are further guaranteed not to drip, leak or waste any syrup or liquids.

Nor will Peerless Syrupers jam cans, because they are furnished with a different size star wheel feeder for each different size can. Peerless Syrupers can be quickly moved into or out of any line, making them the ideal syrupers for the canner of a general line who may only require a syruper for certain of his products.

Order either a 6 or 12 valve Peerless Syruper depending on your speed and capacity requirements.

HALL WRIGHTSON BECOMES PARTNER.

MR. CHAS. T. WRIGHTSON is one of the old, well- known and highly esteemed canners of the Eastern Shore, having operated his large cannery at Easton, Md., for many years. Of late his son, "Hall," has been proving himself a worthy son of a worthy father, and the industry's attention has been forced on him. Corn canners everywhere will recognize that we are speaking of the secretary of the Corn Section of the National Canners Association, Mr. Hall Wrightson.

We are just now in receipt of a letter from Mr. Wrightson, Sr., which reads:

> "It affords me great pleasure to announce that my son, Francis Hall Wrightson, has become a partner with me in my canning business. In the future the business will be conducted by us under the firm name of Charles T. Wrightson & Son."

"HARRY" CANNON A FEDERAL RESERVE BANK DIRECTOR.

THE industry should take credit for distinctions it earns, and we know a host of friends in this industry will learn with pleasure and feel the more kindly towards this banking system after having learned that Harry L. Cannon, son of that fine old canner and early builder of canner associations, H. P. Cannon, has been named a director in the Philadelphia division of the Federal Reserve Bank. This is one of the most important divisions of this banking system, and it emphasizes the business ability of this hustling young canner. He will honor the board, for it is just such men as he that is bringing the canning industry into its proper recognition.

U. S. CIVIL SERVICE EXAMINATION.

The United States Civil Service Commission announces the following open competitive examination:

Junior Marketing Specialist.

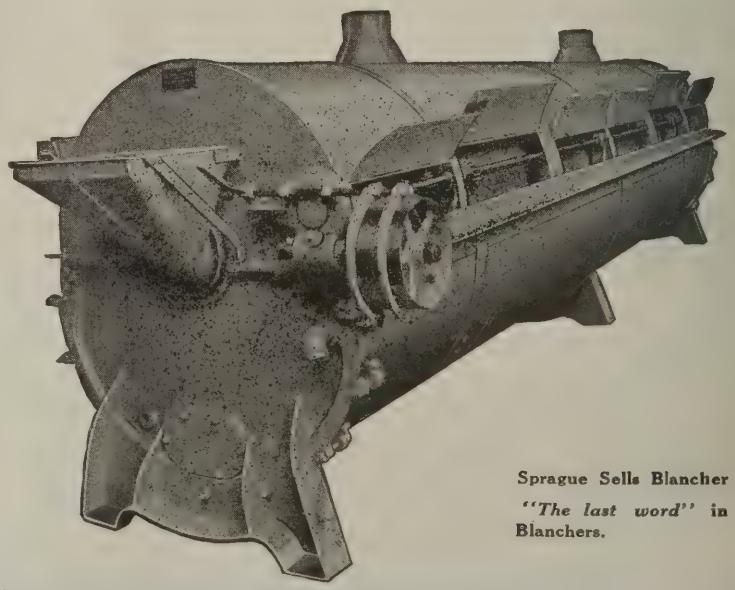
The examination will be held throughout the country on July 9 and 10. It is to fill vacancies in the Bureau of Agricultural Economics, Department of Agriculture, at an entrance salary of $1,860 a year. Advancement in pay may be made without change in assignment up to $2,400 a year.

Competitors will be examined in the following optional subjects: Marketing, grain, hay, feed or seed; marketing fruits, vegetables and miscellaneous products; marketing livestock and animal products; marketing dairy products; marketing poultry and eggs; marketing wool; the economics of marketing, and foreign competition and demand.

Applicants must have had a high-school education, and, in addition, must have graduated from a college of recognized standing, or must be senior stu-

"We have had some seasons when we did not finish our planting in May, but the delayed planting was always the late varieties; but in the present instance there are still some of the Alaska peas to be planted, and unless the growing and canning season is cool and backward, there is bound to be much bunching and consequent congestion in Wisconsin this year."

Clipped From May 24th issue of Canner.



Peas are bunched and come with a rush, how many will you lose?

There's still time to get another Blancher to you, or another *complete* line of pea machinery, to enable you to get your *whole* crop into the cans even if it comes in bunches.

If *your* crop is bunched the probable *loss* through being unprepared *will more than equal the entire cost of the new line.*

Sprague Sells Blancher
"The last word" in Blanchers.

The Nested Sample Grader—

Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.

dents in such an institution, and furnish proof of graduation within six months from the date of this examination. For each year lacking of the college work applicants may substitute a year of experience in a position or positions clearly tending to quality them for work under the optional or optionals in which they desire to be examined.

Competitors will be rated on political and commercial geography, practical questions on each optional subject chosen, a thesis to be handed to the examiner on the day of the examination, and education, training and experience.

Full information and application blanks may be obtained from the United States Civil Service Commission, Washington, D. C., or the secretary of the board of U. S. civil service examiners at the postoffice or custom house in any city.

GOOD MARKET FOR CANNED FOODS.

The sugar mills throughout the Antilla district of Cuba are large purchasers of canned foods, according to Vice Consul Frederick W. Hinke, in a reeort to the Department of Commerce. The fact that Cuba is so engrossed in raising sugar cane gives an opportunity for American exporters of foodstuffs to secure a good market, assisted by a favorable customs tariff and the proximity of the countries to each other. Excellent transportation facilities are also available. At the present time the market there for canned foods is largely in American hands, although Spain, Great Britain and Norway are favored for certain products, imported into the island principally through Habana, and from there distributed by rail. Most of the sugar mills have purchasing agents located in the United States. Large importing houses in the port towns, particularly Antilla, are important buyers of canned foods.

COLOGNE YEARNING FOR FRUIT.

A GOOD market now exists in the Cologne district of Germany for American fresh, canned and dried fruits. Before the war these were imported in large quantities, especially American apples. They are much superior to anything produced in Europe, and have long been popular in Germany, according to Vice Consul John J. Ewart, in a report to the Department of Commerce. The usual port of importation for occupied Germany is Rotterdam. From there fruits are shipped by railway express, by boat up the Rhine and by automobile. At present the demand is very good for apples, fresh and dried, fresh and canned pineapples and canned peaches. Dealers say that, with the exception of oranges and lemons, the prices of American fruits compare favorably with those of other countries.

AMERICAN FRUITS COMMON IN HOLLAND.

SPECIAL attention is being given Holland as a market for American fruits, the imports into that country during the first three months of 1924 having increased greatly over those during a similar period of 1923. Fresh and dried apples, prunes, Sultana raisins, show the largest gains, according to a report to the Department of Commerce from Consul General George B. Anderson, Rotterdam. The record for the whole of last year, which was a much larger year than 1922, was not so sensational as that for the first three months of the current year, but it has resulted in material increases in the sale of American fruits in that market under conditions which indicate permanence if the trade is properly looked after. The record of accomplishment in the raisin trade is in some respects the most significant of the entire list. Under the stimulus of favorable price and trade conditions in the United States, American raisin exporters commenced an intensive sales campaign of American Sultanas in Netherlands during the latter part of 1922. This was continued into 1923 with excellent results, and apparently the trade is now well established. The dried apple trade has been mostly American and Canadian for many years, and its volume depends largely upon prices in the United States and upon the size of the fresh apple crop in Holland and neighboring countries. There is always a large demand for dried apples, not only in Holland, but in the German hinterland and in Central Europe generally. The ups and downs in the prune trade also have depended largely upon European conditions rather than any special failure of American exporters to cultivate the market. The sale of more American fresh fruit in that market is only a matter of intelligent marketing. There has been a large increase in the imports of oranges and other citrus fruit during the first quarter of this year. The increase in the imports of American oranges has been large, while the imports of American grapefruit have become so large that practically all fruit dealers in the larger cities of Holland now regularly carry stocks of this fruit, a thing unheard of two or three years ago.

GOLD SEAL
TIN PASTE

Reg. U. S Pat. Off.

For Spot Labeling

Gold Seal Tin Paste sticks your labels so that they *cannot be pulled off.* It never gets brittle nor allows the labels to loosen up on the dealer's shelf.

It comes ready for use without mixing, shipped in 5 gal. cans, 30 gal. and 50 gal. barrels.

The Markets

BALTIMORE, JUNE 16, 1924

WEEKLY REVIEW

Buyers Finally Realize That Weather Is Not Favorable to Crops —Canners Should Not Sell Further Futures—The Sellers Must Beware—A Golden Opportunity Thrown Away—Slight Flurry in the Market— Many Pineapples Arrive from the Bahamas.

RAIN, STILL RAIN—It has taken old Jupiter Pluvius, Dame Nature, the Weather Man, or whoever is generally given credit for this autumnlike weather we are having and have had all spring, a long time to interest the "great city" buyers; but at last they have taken notice and seem to be a bit peeved at prospects. This is not evidenced in any particular anxiety to buy further of futures, nor of spots, but rather in the remarks heard to the effect that pro-rata deliveries will probably be in evidence again this fall, owing to the crop damage and consequent short packs. It would be too much to expect anything like a buying flurry. There is nothing in the bag of tricks that could cause that, it would seem.

The jobbers do not like to be accused of not buying in proper form, or to be criticized in any way in their buying, or lack of buying, and one cannot blame them. Certainly we have no desire to induce them to buy, especially of futures, and especially of future tomatoes at present prices. To do so would be unfriendly to our readers, the canners, in two ways: First, because in all probability it would put them to serious trouble and cause them heavy financial losses either in making settlement for short deliveries, which now look fairly certain at this writing, or in buying goods to make deliveries on such contracts; and, second, because even if the clouds blow away, warm sunshine and gentle showers are distributed over all the balance of the season yet remaining—ideal growing conditions, in other words—still they will not be able to pack the goods and deliver at present prices, and have any profit left to themselves. So we trust our jobber friends will not misunderstand us when we comment upon their lack of business ability and foresight in failing to take their full supplies of canned foods of all kinds now, while the canners are in their foolish mood and willing to give them the goods. *Caveat emptor* has no place in market consideration today, for it is not the "buyer who must beware," but the sellers, owing to these remarkable crop conditions. And these sellers, apparently, are so wrapped up in self-complacency that they are utterly oblivious of all that is taking place around them, if you get what we mean. At least, we have not been able to wake the tomato canners, in particular, to the golden opportunity which stares If ever a stage was set for the canners to make some money, it If ever a stage was set for the caners to make some money, it was so set this year: a buoyant demand by the consumers—never mind the buyers—which has cleaned out every last can of the 1923 packs and carryovers, and a promise of a steady increase in the volume of this demand if the canners only prove faithful to their calling and give them good products. Which means that they could not have overpacked the market this season, try as they might have. And yet they started in by scaring themselves with the idea that the packs will be too large, and so cut the prices against themselves, and threw away every opportunity for a proper profit.

And even now, in face of what many have pronounced the most unfavorable season in the past quarter century, they apparently can see no hope, for we have seen sales tickets this week for No. 2 standard tomatoes, futures, at 82½c, delivered, Baltimore! Of course, these sales are not by the men who read and keep informed and in touch with passing events, but the buyers and their agents, the brokers, make the most of such sales, and they have a most direct effect upon the whole market, although they should not.

CORN—It is so with tomatoes, but it is not so with corn, nor peas, string beans and many other products. The canners of these latter articles, noting the completely cleaned-up condition of the spot markets, and the very questionable outcome of the 1924 crops, are either refusing further business in futures, if they are fairly well sold up, or advancing their prices in conformity with conditions. And that is as any business man should do. Corn is in a precarious condition, with floods in Indiana and Illinois; cool, if not actually cold, weather in all corn-growing sections, and almost daily rains, keeping the growers out of their fields and killing off the chances of what little corn has been planted to this date. Iowa seems to be the exception to this rule, and the only one, for that State, as you will note in the crop reports given elsewhere in this issue, is suffering from a long drought. Meantime such States as had any surplus of spot corn are cleaning down to the vanishing point, and corn prices are improving. Western corn canners value their spot and future corn at or above $1, with spots climbing well above it; but again complaint is heard of the Eastern corn canners and holders that they fall far behind these prices.

MARKET FLURRY—The nearest thing to a market flurry in canned foods took place in Baltimore this week, and would still be with us if there were any stocks to trade in. Everybody has seemed to want No. 2 tomatoes, and this size has advanced out of proportion to the others. Buyers were warned by the brokers and urged to buy before they were all gone, but little attention was paid to these warnings. Some came back for a carload or so at $1.05 when the market was $1.10, and then $1.10 when the market had advanced to $1.15; but someone else had grabbed them, and now they are begging anybody to tell them if they know where any No. 2 tomatoes are at $1.20 or more. The man that has any can ask and get $1.25 for them, but they say they are all gone, and the new canning season many months away. We will see this repeated in No. 3 tomatoes, and very soon, we expect. Just as soon as the holders of standard goods have the backbone to ask $1.50 or more for what few are left. They are worth more; in fact, they are worth what the holders care to ask

for them, because spots cannot possibly last until new tomatoes can be packed.

PEAS—Some new packed peas are on the market, packed from the "steamboat" pea, which come from Virginia and North Carolina; and some of the Southern canners are getting new string beans to market and to good advantage. But the pea season is some little time off in this section as yet, though it ought to be nearly over with by this time of the month.

While you have the weather so much on your mind at present, we wish you would keep us in mind and send us reports of your condition. Tell us how the prospects look with you, and with canners in all sections doing this you will get the true version of affairs, and what this industry most needs is this sort of truthful statements of conditions as they are.

PINEAPPLE—There has been some very large shipments of pineapples from the Bahamas this season, and advantage has been taken of this by the canners. As we write, a large cargo is in this harbor, the pines in crates, however, whereas they used to come here in bulk—and very large bulk at that.

Seeman Bros. Expand—Seeman Bros., prominent New York City wholesale grocers, have taken over the warehouse formerly occupied by Koenig & Schuster, old-time New York grocery jobbers who merged with Francis H. Leggett & Co. a few years ago. This warehouse is needed to accommodate the stocks of Seeman Bros., who have been expanding their business constantly during the past several years.

Grocery Jottings—Frederick B. Marston, for many years associated with the Conant Patrick Co., wholesale grocers of Portland, Maine, and latterly with the Continental Products Co., of Portland, died at his home there recently.

Tollerton & Warfield Co., wholesale grocers of Sioux City, Iowa, have merged their business with that of Wm. Tackaberry Co., also of Sioux City. The business is being continued as Tollerton & Warfield Co., under the same control and management.

James G. Godfrey has been elected president of the Wisconsin Wholesale Grocers' Association for 1924. Other officers chosen were: M. J. Brew, vice president; Mitchel Johannes, second vice president; Francis E. Dewey, treasurer, and Francis Rickert, secretary.

Retailers Heading West—New York retailers left this week for the annual convention of the National Association of Retail Grocers, which will be held in Los Angeles during the coming week. The New York delegation left on two special trains, made up of Twentieth Century Limited equipment, one of 13 cars and the other of 12 cars. The delegates will live on the trains for practically the balance of the month.

NEW YORK MARKET

Weather Making All Take Notice—Maryland Future Tomatoes Continue at Low Prices—Spots Higher—Sardines Are Weaker—Some Interest in Fruits—Corn Advancing as It Is Cleaned Up—Future Apples Offered at $4.00—Spot Pears Very Scarce.

New York, June 12, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

THE WEATHER—Buyers of canned foods are showing an unusual interest in weather conditions this year. The late spring will have a vital effect upon the canned foods markets for the coming season, inasmuch as canning crops are backward in many sections, and this will effect both the quantity and the quality of this year's pack. Buyers who entered the market with a considerable degree of confidence early in the year and bought futures in fairly liberal volume are now congratulating themselves.

Future Tomatoes—Maryland canners continue to quote on 100 per cent. delivery contracts at 55 cents for 1s, 85 cents for 2s, $1.25 for 3s, and $3.80 for 10s, all prices f. o. b. cannery, for standard quality. Puree is offering on future contracts at 47½c to 50c per dozen for 1s, made from trimmings, with whole concentrated at 55 to 57½ cents. No. 10 whole tomato puree of 1.04 specific gravity is quoting at $3.60 per dozen.

Spot Tomatoes—There has been a little demand for 2s for prompt cannery shipment and canners hold the market at $1.10 to $1.20. No. 1s are offered at 57½ cents, 3s at $1.35, and 10s at $4.00 to $4.15. It is not believed that there will be much of a carryover. Indiana packers are withdrawn on tomatoes, both spots and futures, in most instances. California canners are quoting new pack at $1.12½ per doezn for standard 2½s in puree, although only a few packers have named thus far.

Sardines Weaken—With the new canning season steadily speeding up, the market for Maine sardines has eased off. Offerings of quarter keyless oils are reported all the way down to $3.60 per case, although most holders are inclined to hold for $3.75 per case, f. o. b. Eastport. California sardines have been offered at lowered prices, sales of quarters having been made down to $6.00 per case. It was explained that these sales represented the clearance of small carryover stocks of one or two packers.

New Fruits—There has been a little buying interest in new pack California fruits, but future sales have not been heavy on all varieties. The trade is not vet certain as to just how much damage has been done to the growing crop of canning peaches, and so is inclined to go slow. Carryover stocks of California peaches, particularly standards, are light. and the market holds firm. It is expected that the quantity of apricots available for canning will be fairly liberal, and buyers are inclined to go slow on this item. Cherries are also expected to be available in a large way, and this, in conjunction with the fairly liberal carryover of old pack, has weakened the market for this fruit. Coast reports indicate that the tonnage of pears shipped fresh this year will be heavier than last season, and canners are apprehensive that this business will cut down the supply of pears for canning.

Corn—Southern canners offer spot standard corn at 95 cents to $1.00 per dozen, f. o. b. cannery. Mid-western packers are selling at $1.00 per dozen for this grade. Future Southern corn is quoted at 87½ to 90 cents for standard 2s and $6.00 for standard 10s, with extra standard at 95 cents for 2s and fancy at $1.05 to $1.10 per dozen. Western packers quote standard corn at 95 cents per dozen on future contracts. Reports from Maine state that the market for future fancy corn remains steady at $1.70 for Golden Bantam and $1.45 for Early Crosby.

Offer New Apples—New York canners are quoting future apples at $4.00 per dozen, f. o. b. cannery for fancy quality. Maine canners quote $4.75 factory, for quartered. Michigan packers have not yet opened. Maine canners quote future apple sauce at $1.15 for 2s and $4.75 for 10s.

Salmon—Unseasonable weather throughout the country has delayed the usual spring buying campaign on salmon, and the market in Seattle remains quiet and unchanged. Thus far, the Alaska pack has not gotten fully under way, although the canneries along the Columbia River are running full blast. Canners are talking higher prices for this year's pack, owing to governmental fishing restrictions, increased costs, etc., but it does not appear at this time that the market is in position to absorb much salmon at prices above those now prevailing. Salmon is selling at high prices at retail now, and many in the trade do not believe that consumption will pick up much until prices go lower and give salmon a chance to sell on a competitive price basis with other foods of similar food value.

Expect Pineapple Opening—According to reports along Hudson Street today opening prices on new pack Hawaiian pineapple are due. The trade expects that the prices will be in by the end of the week, and it is probable that they will be made known to the trade late today.

Peas Scarce—The shortage of wanted grades of peas on spot remains unrelieved. The season is late in the sections which ordinarily produce an early pack, and thus the distributing trade is not able to obtain supplies from the usual sources. The market continues strong on both standards and fancy quality. and jobbers carrying a full line of private brands now report that their assortments are "shot full of holes."

Spinach Firmer—A little more strength is reported in the market for Southern spinach, and as a result buyers are showing a little more interest in this item. The California spinach market is also showing strength.

Michigan Fruits—Michigan canners have sold a good portion of their expected pack, and are showing firm views on the market. New York has been taking Michigan fruits in increasingly large quantities during the past few years, particularly cherries, berries, apples and peaches.

Notes of the Trade—Frank Elliot, of the Oregon Canning Co. of Newburg, Oregon, was in the market during the week.

W. G. Becker, of R. C. Williams & Co., Inc., has just returned from a week's trip through up-state fruit packing sections.

F. G. Henry, the champion angler of Hudson Street, leaves this week for a two weeks' fishing trip in Canada, during which he has designs upon the finny population of the Dominion.

John King, of Burnham & Morrill Co., of Portland, Maine, was on the Street this week.

CHICAGO MARKET

Buyers Alert to All Opportunities—Some Few Jobbers Offering Stocks—Nearly Everything in Spots Is Cleaned Up—Changing of Canned Foods Week From Spring to Fall Causes Interest—Export Business Is More Favorable.

Chicago, June 13, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

BUYERS ALERT—The market for canned foods is not as quiet as some would infer from statements in the trade press, as wholesale grocers are alert and anxious buyers of any article in the line of staple canned foods for immediate or spot delivery which brokers can find.

The canners are disposed to clear out all their small and rather insignificant holdings of everything of the 1923 pack, and to be thereby prepared for handling the 1924 pack without worry in relation to closing out remnants of the old pack. These offerings are being closed out by the brokers to the wholesale grocers as rapidly almost as they are offered.

Some of the wholesale grocery houses in the interior and a few in Chicago are offering through their brokers some small surplus lots of canned foods, and these are being sold rapidly, and it looks to the writer as if the clean-up of the 1923 output of canned foods will be more thorough than any known in the history of the industry for many years.

Nearly everything in canned foods from the 1924 pack will arrive on a bare market.

The cold weather continues and has been persistent for almost two months, and it rains nearly every day in this particular lake region section.

The change of Canned Foods Week from Spring to Fall and the fixing of it for November, 1924, instead of Spring of 1925 is received divergently. Some of the brokers and some of the wholesalers think that the change is good. Others think that it will bring the two selling events in this year too close together, and some adhere to the opinion that Spring clean-up to Canned Foods Week would be better than the Fall promotion.

However, everyone will be loyal to the decision when it is finally made and the dates fixed, and will work faithfully to promote the success of Canned Foods Week.

There is a good deal of indecision and doubt in relation to crop conditions, and the situation is hard to determine. Planting on the high lands is good, and the crops are making progress. On the low lands the planting has been bad, and the crops are either not planted at all or not making any progress, and even the canners themselves don't know exactly what the average stand as to acreage is. It will be some time before the situation will develop itself.

Quite an interest is being taken by canners in the development of the exportation of canned foods. The statistics of exports, which have been compiled for the past year by the Department of Commerce of the United States, have proven greatly interesting and have shown to canners that the export business for their products is in a more favorable situation than they supposed.

These statistics show that not only canned fruits, canned salmon, canned milk and canned meats are exported to an important extent, and that they are shipped to every civilized and uncivilized country in the world, but that canned vegetables, corn, peas, tomatoes and other articles in canned vegetables are also beginning to be exported and introduced throughout the world.

The building up of an export business in canned foods is a most important proposition, and the "Canning Trade" should take up the suggestion and give it the benefit of its splendid power of promotion and suggestion.

About a year or so ago the Congress of the United States gave, by formal action, to the President of the United States authority to adjust protective tariff rates to other countries where reciprocity could be obtained—that is to say, where reciprocal concessions could be obtained—and this power in the hands of the President is a mighty power for the promotion of the selling of canned foods, especially to South American, Asiatic and African countries, as well as to European countries and Central America and Mexico, and a large export business in canned foods could be organiezd and built up by establishing such reciprocal conditions. It is to be hoped that this matter will be entered into aggressively.

The Western Canners' Association will in a few days announce the appointments of its committees for 1924-1925, and President Rogers will appoint a Committee on Exportation of Canned Foods, and endeavor through that committee to promote the distribution of canned foods throughout all the world. I respectfully suggest that this is a matter of great importance and that President Rogers is far-seeing in starting this work in a practical way.

ST. LOUIS MARKET

Inquiry Shows Improvement—Odds and Ends Exchanged Between Jobbers—Tomatoes Slow Sellers—Corn Is Quiet—Delay in Early Packed Peas Felt—New String Beans on the Market—Fruits Steady.

St. Louis, June 12, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

IMPROVEMENT—Inquiry for canned foods the past week has been somewhat better than it has been, but there has been a scarcity of large orders. No speculative interest is being shown, even when it is a recognized fact that a certain commodity, because of its scarcity, will advance in price before the new pack comes in. The trade continues on a hand-to-mouth buying basis, and no special inducements can make it change. Odds and ends are being taken from first and second hands, increasing its shortage. The spot market has been well combed. In spite of the shortage, there is a dull market, and only bare requirements are being considered. Future buying is still confined to narrow limits.

Tomatoes—Tomatoes are the slowest selling item in canned foods. It is hard to move anything but Southern No. 2s. Other sizes are dull, and factory prices are being shaded in many instances. With an insufficient spot market, future offerings are being overlooked. The new pack is coming in slowly from the most Southern districts, but buying on this account is not increased, as spots have been too slow a seller for several weeks to inspire much confidence.

Corn—Corn is quiet, but standard is a good seller, although there is not enough of a shortage in standard to make the market very much excited. Buying is only for requirements. Fancy is in the class of most other items, because of its scarcity.

Peas—Peas are scarce in most grades and are well maintained. The scarcity will continue until the Southern factories are able to make larger deliveries of new packs. The Southern canning sections, which commence to pack early, have been delayed by cold, wet weather, which has influenced the packing of peas. What few peas have been packed has not changed the spot situation. In Wisconsin the prospects of a pea pack are rather discouraging because planting was delayed two or three weeks. In many sections of the State it is said that Alaska pack may be harvested with the sweets, so there may be a congestion at the canneries. Because of this congestion, packing of fancy grades may be difficult. It looks at present as if the pack this year will run heavily to standards.

Miscellaneous—Minor vegetables are being taken to meet the current demand. Buyers are using new pack string beans and stringless beans which are now ready for delivery from most Southern sections. Southern and California spinach is firm, because canners write that their packs are being cleaned up as rapidly as it is ready for delivery. Bargain prices are being asked for asparagus.

Fruits—A steady market prevails for California fruits. The demand for jobbing replacements is increasing, and standards at prevailing quotations are being absorbed from first hands. Choice are not so much in demand. Lower grades would move, but they are not available. Pears are hard to locate, as stocks have beeen pretty well absorbed. Cherries are quiet. Pineapple is moving, but not in a big way. Apples are quiet.

Information has been received here that from present indications there will be a splendid crop of cherries at numerous points in the Ozark territory. It is expected that they will be ready for the market in a very short time. Some are even now coming in. These cherries are largely of the Montmorency variety.

Market Prices—The following are quotations here for canned vegetables, carload lots, f. o. b. at point of shipment:

Total receipts of strawberry auction sales at Monett and at Noesho, Mo., the principal Southwest Missouri strawberry marketing points, from May 18, when the season opened to Sunday night, June 8, were $1,132,000, it is announced by the local representative of the Bureau of Agricultural Economics, of the United States Department of Agriculture.

The entire output of the district is sold at auction, the buyers assembling each evening in a hall furnished by the Monett Commercial Club. The berries are sold by two large co-operative associations of growers.

The total daily sales range between $30,000 and $120,000. The first day of the season, May 18, the sales aggregated $2,000. The peak to date was June 2, when the $120,000 mark was set. The average price paid to growers this year has been $3.25 a crate. A crate contains 24 quart boxes.

The two co-operative associations handling the sales are the Ozark Fruit Growers' Association and the Missouri Strawberry Exchange.

District officials of the associations at each community where berries are raised ascertain each afternoon the total amount picked that day. The number of cars available for sale and the car numbers are wired to association headquarters. Then the cars are offered to the bidders, about 25 of whom are in Monett this season.

Standardization in picking and packing methods are co-operative marketing permits handling and sale of the berries at a cost to growers of 5 per cent of the f. o. b. price. Some of the growers will net $300 an acre this season.

While the berries are being sold at auction, the cars are brought in from the growing points and assembled at Monett. The Frisco Railroad runs a strawberry special each night both to St. Louis and Kansas City, where the trains are split and cars forwarded to destinations. About 50 to 60 cars a day are handled. The railroad gives preference to the business, because the product is perishable.

The buyers represent wholesale firms and brokers in all parts of the United States, and several Canadian firms are represented. The Aroma variety of strawberries is the principal produced in Monett. The picking season will continue about two weeks.

MAINE MARKET

Buying Shows Marked Improvement—Sardine Canners Discouraged—Canada Puts Prohibitive Tariff on These Fish as Caught — Blueberry Season Promising — Corn Crop Looks Better—G. H. Buxton Dead.

Portland, Me., June 13, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

BUYING BETTER—The general grocery trade has shown a marked improvement in the past fortnight and buying is much better. Of course, this is largely due to the opening and provisioning of the hundreds of summer schools, sporting camps and hotels in Maine, and does not necessarily indicate an improvement in general business conditions.

Retail selling in all lines is extremely quiet. Many department and specialty shops state that they are not paying their running expenses this spring, and the passing months show no improvement. Retail grocery buying in good centers is running about 70 to 80 per cent of normal, and in manufacturing towns where work is slack the average falls to 55 per cent in some locations.

Sardines—The sardine industry has a right to be discouraged. Again this season the costs are high, fish are scarce, and the market is slow. Less than half of the factories in Maine are operating today, and none on full time. A recent ruling from Canada, taxing $10 a hogshead on all Canadian fish shipped into the United States, has interfered with the source of supply for many down-East factories, and has a tendency to force up the price on the few fish taken in American waters. Until a good run of herring comes in and stays with us for the rest of the season, work will be slack and costs very high. The few fish that are now being packed are going to the market at around $4.00 for standards. It is a sad fact that buyers of sardines are looking for a price proposition without considering quality, which is disastrous to any line.

Blueberries—A new blueberry cannery is to be erected at North Gray, Maine, to take care of acreage recently purchased and improved in that vicinity. This is to be operated by H. L. Forhan and Daniel Foss, who own most of the acreage. Mr. Forhan has been handling berries for many years in Washington county, and also packs at his Yarmouth factory near Portland.

The present outlook for berries is pretty good, as indicated by the blossom. However, this fruit is easily affected by dought, also by heavy rains, which beat off the berries; and for that reason it is always impossible to estimate the crop until harvested. This is one reason why prices are never named until late in the season.

All crops this year are liable to damage from dry weather. During the earlier days of planting and growing the ground was very wet, so that the roots did not "dig down" for water. Now that the surface of the ground is dry, these roots are not deep enough to feed the plants, and the result is already noticeable in many places.

The corn crop is looking very much better than could possibly be expected after the unfavorable weather of May. Farmers got desperate and put their corn in the ground whenever possible; just then we had a few warmer days and the result is astonishing. Even at best, however, the crop is very lightly planted and in a delicate state of health, but is better than none at all. The only interest in future corn is in the field, not in the market. Canners are not offering more contracts at this time, and their best hope is to be able to make full delivery on the sales already completed.

Death of G. H. Buxton—For the third time within a month death has visited the circle of Portland wholesale grocers. George Herbert Buxton, president and oldest member of the H. S. Melcher Co., died June 9th, suffering a severe attack of health trouble for about two weeks before his death.

Mr. Buxton was 76 years old, and at the age of 19 he began work with the old firm of Churchill, Hunt & Melcher, now H. S. Melcher Co. He has been president of this corporation since 1905, and has been one of the best-known men in the city. He was a man of sound principles, conservative but active policy, and his advice and judgment was sought by all of his business and political associates. He was just an old-fashioned New England business man, loyal to the highest ethics, active in church and civic work, and a friend to man.

Mr. Buxton's passing, following so closely the loss of C. H. Randall, of the Charles McLaughlin Co., and Fred Marston, of the Conant Patrick Co., is a serious loss to the trade in this market, and a deep grief to those who enjoyed association with him in his various activities.

CALIFORNIA MARKET

Good Business Where Opening Prices Have Been Made—Cherries Being Bought—No Opening Prices on Tomatoes Yet—Plums Damaged—Canning Pineapple—Sardine Law Upheld—Preparing for Big Season in Salmon—Coast Notes.

San Francisco, June 12, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

BUSINESS GOOD—An excellent business has been done on California canned products on which opening prices have been made, but comparatively little interest seems to be manifested in futures which are offered subject to approval of opening prices. Asparagus, spinach and peas, on which definite prices were quoted several months ago, have been closely sold up, and the packing of these is about at an end. Considerable interest has also been shown in cherries, on which tentative opening prices were named recently, and which are now going into cans. Holdover stocks of fruits are dwindling away and will be in very light supply by the time the new pack is ready. Buyers are taking small lots at a time, but are coming into the market frequently. Export business has been quite good this spring, and well ahead of that done a year ago. During April exports of canned milk from San Francisco reached a value of $285,923, as compared with $211,194 in April, 1923. Exports of sardines amounted to $96,150, as compared with $53,386; exports of canned salmon amounted to $184,156, as against $98,845, and

exports of canned fruits reached the splendid total of $899,363, as compared with $356,095 during April, 1923.

Tomatoes—Opening prices have not as yet been named on the 1924 pack of California tomatoes, but are expected within the next two weeks, at least. Some large contracts with growers have been made of late at $15 a ton, and it is intimated that opening prices will be made on about this basis. The protracted drought tends to make the cost of production higher than usual, since irrigation and added cultivation is necessary.

Plums—Considerable damage has been done the California plum crop by high winds, which occurred late in May, shippers reporting a loss of about one-quarter of the crop. It is anticipated by canners, however, that it will be possible to make the usual pack. The same storm did some damage to pears, but the loss is much less marked than in the case of plums.

Pineapple—The packing of pineapple in Hawaii is now under way, and will be in full blast within thirty days. The quality of the fruit being harvested is reported to be excellent, and the outlook is for a good output. Preliminary estimates call for a pack of about 6,000,000 cases, but should growing conditions continue favorable this figure may be surpassed. Opening prices have not been announced, but these are expected any day. Sales representatives of various concerns are in the Eastern markets, and an active selling campaign is under way. The co-operative advertising campaign that has been launched, and which will be continued during the remainder of the year, is expected to be of great value in stimulating the demand for this fruit.

Sardines—The California State Supreme Court has upheld the State law prohibiting fish packing companies from using more than twenty-five per cent of the sardine catch for the manufacture of fertilizer and other by-products.

Arthur Sconberg, authority on insect pest control, recently addressed the Rotary Club, of Oakland, on the control of pests and declared that the loss from this source last year in California amounted to not less than $26,000,000, or about one-tenth of the value of the fruit crop annually. The brown rot, which destroys apricot and prune trees, came from Japan, he said, while mildew, which causes so much loss to grape growers, came originally from Germany. He declared that the enforcement of strict quarantine regulations was necessary to preserve the fruit-growing industry, and that it was a matter which affected the fortunes of all.

Salmon—Preparations are being made for a heavy catch of salmon in British Columbia this season, and practically every plant will be in operation. Last year but one or two plants were operated on the Queen Charlotte Islands, but this year all have made preparations to run. In all about fifty canneries will be in operation.

Coast Notes—California has a reputation for some unique products, some of which make their way into the humble tin can, but a new one has made its appearance, if the veracity of the clerk at the cigar stand of the Palace Hotel is to be trusted. An Englishman recently sauntered up to the stand and engaged the clerk in conversation, mentioning the fact that he had been here before, some twenty years ago. This led to some questions and some elucidating information.

"I say, old chap, what have you done with the bally fogs? They used to be nearly as thick as the good old London sort."

"Well, you see, our canning industry has become a wonderful thing; they have experimented for years, and now turn out a vast variety of products."

"But that has nothing to do with fogs. Where are they?"

"You bet your life it has. The demand for California climate and our wonderful clean, health-giving fog is such that they now can it in concentrated form and ship it everywhere. Every good Californian away on a trip takes a case of canned fog along to keep him from getting homesick."

"My word! I must jot that down. You Californians are a wonderful sort. Canned fog! Marvelous!"

W. N. Rolph, vice-president of the Griffith-Durney Co., San Francisco, is making a business trip to Europe and will be away until about the end of July.

B. McPhun, for many years with Mailliard & Schmiedell, San Francisco, but who engaged in the brokerage business on his own account three months ago, is now acting as selling agent for the Lindsay Ripe Olive Co., of Lindsay, Ca., and has been successful in booking a good business. He has offices at 112 Market Street, which is headquarters for the brokerage trade.

R. D. Frey, sales manager of the California Canneries Co., Francisco, is making a trip to Eastern trade centers in the interests of this concern.

J. H. Long, representing Libby, McNeill & Libby, Chicago, is paying the San Francisco office of this concern a visit.

The California Olive Growers' Association, Inc., has purchased a five-acre tract at Strathmore, Cal., on which it will erect a pickling and packing plant with a capacity of 1,000 tons.

SUGAR SURPLUS TO EXCEED MILLION TONS.

Federal Statisticians Predict Huge Carryover Because of Record Cuban Crop.

THERE will be a surplus of 1,364,854 tons of sugar (refined basis) available for the United States between now and next October, predicts Federal Sugar Refining Company, as a result of a careful world survey just completed. As a result of this prospect, sugar prices have steadily declined, raw sugar reaching the lowest point since 1922. But, despite several drastic reductions, demand has been restricted and buyers have purchased only for immediate needs, being doubtful about future prices.

The Cuban crop will reach the record total of 4,050,000 tons, according to the latest estimate of Federal's representative on the island. This will leave available 1,880,951 tons of raw sugar for the United States until October 1. Adding the balances available from Porto Rico, 141,060 tons; that from Hawaii, 305,630 tons; from Philippines, 149,547 tons, and 2,000 from Virgin Islands and 15,000 tons of full duty sugar to the refiners' and importers' stocks of raw now on hand, makes a total available of 2,761,140 tons. Deducting exports and meltings for the domestic trade (on the same basis as last year) the total available on September 26 is estimated to be 1,364,854 tons of refined sugar.

Stocks in Cuba are over half a million tons more this year than at the corresponding date last year. The estimate as of May 24, including sugar at plantations, ports and in transit to ports, totals 1,724,616 tons, against 1,179,847 tons at the same time in 1923, an increase of 544,769 tons. Despite reports of revolution and strikes in Cuba, buyers have apparently realized that a huge carryover is inevitable, and prices must stay in line with conditions of supply and demand. Talk of "large" sales of Cuban raw sugar and American refined to foreign markets has also not been borne out by the facts, while the normal season of heavier sugar consumption is approaching, stocks are larger than usual, and will go a long way to satisfying any demand in the near future. Conditions during April were such that certain American interests were offering granulated sugar in England at prices nearly one-half cent a pound under prevailing domestic parity.

Europe's 1924-1925 beet sugar crop will total 6,770,000 tons if the outturn is based on the 1922-23 outturn, and 6,056,000 tons based on the bad European weather conditions of 1923-24. The acreage sown this year exceeds last year's by 21 per cent, 1,975,000 hectares, as compared with 1,633,137 last year. Germany reduced its consumption of sugar 300,000 in the five months ending March 1, according to one of Federal's European correspondents. This year consumption was 350,000 tons, as compared with 650,000 tons in the corresponding period last year.

The improvement in the English sugar market, expected after the announcement of the new duties, has not materialized.

Stocks on hand May 1 totaled 410,000, about equal to the consumption during the first four months of the year.

Exports of sugar from the United States in the first four months this year were less than a half of those in the corresponding period of last year, and about one-seventh of those in 1922, according to Federal's figures.

What Canned Foods Distributors are Doing

Packer's Interests Score Victory in Latest Consent Decree Hearing—Decree Not Voided, However—American Wholesale Grocers' Association to Carry Case to United States Supreme Court—Outstandings Worry Trade—Other Notes and Observations.

THE Consent Decree—The famous packers' consent decree has again found its way into the limelight during the past week as a result of the action of the Court of Appeals of the District of Columbia in reversing Justice Bailey's decree denying the California Co-operative Canneries the right to intervene in the case. Counsel for both the packers and the Co-operative Canneries took the position that the consent decree was invalid, but in the decision rendered by Justice Vanorsdel the court declined to pass on the validity of the decree inasmuch as the validity of the Consent Decree was not questioned in the Court below by any of the parties to the action. The only order appealed from in the proceeding which was decided on June 2 was the refusal of the lower court to grant the canneries the right to intervene. The Court of Appeals based its opinion that the canneries should be permitted to intervene on the claim of the canneries that their contract with Armour & Co. was destroyed by the Consent Decree and they have no remedy unless they are permitted to be made a party to this proceeding, so that they may set up their rights and sustain, if they can, their claim that the Consent Decree be abrogated insofar as their contract is concerned. In the order reversing the lower court, the Court of Appeals remands the case to the lower court with instructions that the latter court allow the intervention of the canneries and such further proceedings thereupon be had as are necessary to determine the issues raised by the canneries' petition.

Commenting on the latest decision in this bitterly waged legal content, J. H. McLaurin, president of American Wholesale Grocers' Association, says: "It is not, of course, our intention to permit the return of this case to the Supreme Court of the District of Columbia until we shall have presented the decision of the court today (June 2) to the Supreme Court of the United States for review and determination. It is probable that this matter will not be heard before the United States Supreme Court before next winter."

The National Wholesale Grocers' Association, in commenting on this latest move in the Consent Decree case, says: "Whatever reports may have been circulated to the contrary we advise wholesale grocers most emphatically that the present decision does not hold the packers' Consent Decree void, either in whole or in part. This decision does nothing more than to permit the canneries to come into the case for the purpose of making such future application in the court below (that is the Supreme Court of the District of Columbia) as it may think necessary to protect its rights under the contract it had for the sale of canned fruit to Armour & Co.

"Attorney General Stone has not yet made public the course the United States will pursue as a result of this decision, but it is understood he has previously indicated very clearly that this present administration will make every proper effort to sustain this consent decree as entered by the Supreme Court of the District of Columbia February 27, 1920. Thus far Judge Bailey of the Supreme Court has not rendered his decision upon the latest application of Armour & Co for further extension of time within which to dispose of its unrelated lines. The National Association at its annual meeting in Chicago last month determined unanimously to continue its fight to have the Consent Decree sustained according to its terms as entered by the court in 1920."

American-National Merger—Nothing official has yet come forth as to any plans which may be on foot to merge the activities of the National and the American Wholesale Grocers' Association. The American moves its headquarters to Washington July 1. As indicative of the changed relations between the two jobbers' organizations, it is interesting to note that the National in several of its recent bulletins has mentioned its contemporary organization, as in Bulletin No. 635 General, on the Consent Decree, which says: "As respects possible appeal to the Supreme Court of the United States, National Wholesale Grocers' Association and American Wholesale Grocers' Association now have for consideration this question of policy just mentioned." It has been years since the National has passed on to its members any information whatever regarding the American (former Southern) Wholesale Grocers' Association.

National's Officers for 1924—John W. Morey, of the Morey Mercantile Co., of Denver, new president of the National Wholesale Grocers' Association, is now selecting chairman of the various committees for 1924. The executive committee this year is made up as follows: John W. Morey, Austin L. Baker, Eldridge, Baker Co., Boston; O. J. Moore, O. J. Moore Grocer Co., Sioux City, Iowa; Roy L. Davidson, M. O'Connor & Co., Indianapolis; Charles Feilbach, the Feilbach Co., Toledo; Carl H. Schlapp, Krenning-Schlapp Grocer Co., St. Louis; Sylvan L. Stix, Seeman Bros., New York City; S. B. Steele, Steele-Wedeles Co., Chicago; E. M. Schenecker, James McCord Co., Fort Worth; E. F. Brewster, Brewster, Gordon & Co., Rochester; Perry T. Cumberson, Wm. Cluff Co., San Francisco; M. A. Christopher, Christopher Mercantile Co., Kansas City, Mo.; Paul H. Earle, Earle Bros., Birmingham, Ala.; M. W. Griggs, Griggs, Cooper & Co., St. Paul; Guy W. Rouse, Worden Grocer Co., Grand Rapids, and C. C. Virgil, Western Grocer Co., Chicago.

Too Many Sales—Too Few Profits—The Alabama Wholesale Grocers' Association, in a bulletin to members, says: "Many of us are suffering severe losses from our large outstandings. The average for Alabama is entirely too high. Recent reports from a few State Secretaries show the following: Indiana, 77 per cent.; Michigan, 78 per cent.; Illinois, 105 per cent.; California, 101 per cent.; Oklahoma, 10 per cent." The average for Alabama in April was 151 per cent., against 137 per cent in March, 148 per cent. in February, and 136 per cent. in January. "We are in business to make profits and not sales," the letter of the Alabama Association cnotinues. "There can be no profit, regardless of how satisfactory the sale may be, until the money covering the merchandise sold has been collected."

Value of an Association—"We have had members ask us the question: 'What does the association do for me or for my busines?'" writes C. W. Linthicum, secretary of the Arkansas Wholesale Grocers' Association. This association has always stood for a fair, square deal. It has shown no favoritism among members. This association believes that it is fair, right and legal for wholesale grocers to sell to whom they please, or refuse to sell. This association has ever contended that to make a success of your business you should sell all goods at a fair margin of profit above the cost of doing business not by any price agreement, but by your own free will and accord. This association contends that it is fair and legal that you should collect from the carriers for your loss and damage claims, at your established price, it contends that many of the splendid manufacturers from whom you buy are not giving a fair cash discount; it contends that a wholesale grocer, to be recognized as such, should be one that carries in his warehouse a well assorted stock of food products and allied lines, travel salesmen, have no retail stores, and not discriminate against his customers in the territory where he travels salesmen, by offering those of other sections inducments not given where he does travel salesmen; it contends that you and all merchants who desire to handle drugs, medicines, and home remedies that are sold in original packages, may do so without interference from the drug concerns who seem to think otherwise. If you agree with the foregoing, then give us your full support and co-operation that we may continue to function in the interest of fair play in the wholesale grocery business."

New York Jobbers Take Up Golf—The New York Wholesale Grocers' Association will hold an invitation golf tourney for members on June 18 at the Englewood Golf Club links at Englewood, N. J. The affair is being arranged for by a committee composed of Howard L. Sills, chairman: Jos. Seeman, H. E. Sayre, E. S. Truesdell, Geo. C. Buell, and A. B. Martin.

Green Retires—John A. Green, for the past eight years special representative of the American Sugar Refining Co. to the retail grocery trade, has retired. Mr. Green is well known to the retail trade, having for many years served as secretary of the National Association of Retail Grocers.

SMILE AWHILE

OPPORTUNITY IS GOLDEN

The Backward Suitor—What makes you so excited tonight, Mildred, You've never acted like this before during the three years that we've kept company.

The Hopeful Maid—Oh, Arthur, I just discovered this afternoon that this is Leap Year.

LABOR-SAVING

"How did you manage to get the weeds down so well in your garden?"

"I blindfolded the neighbor's hens and they scratched out as many weeds as they did vegetables."

THE ALARM

Barber—I cut a gash in a customer's chin today and it cost me five dollars.

Friend—He made you pay him that?

"No, but he was sound asleep, and I figure the gash that woke him up stopped me from doing five more dollars' worth of work on him."

BUM TECHNIQUE

"Holy cats!" exclaimed the owner of the Uncle Tom show. "This is the last time I'll ever carry dachshunds to chase Eliza across the ice."

"What's the matter?" inquired the stage manager.

"Looka there. That mutt's got his front feet on one shore and his hind feet on the other river bank, and all the ice is floating down stream under his tummy. Order some short dogs."

PRECAUTION

It was 3 A. M., and the irate married lady who had been waiting awake all night at last heard uncertain footsteps on the stairs.

"Are you sober?" she demanded, sharply.

"If you're m-m-my w-w-wife," answered a cautious voice, 'I mos' shert'nly am."

REAL TRAGEDY

Mrs. (at the telephone)—Oh, Jack, mother's fallen down the stairs—now, dear, do be brave—and broken——"

Mr. (eagerly)—Her neck?

Mrs.—No, dear—that bottle of Benedictine she promised to bring us from Bermuda.

SOUNDS SUSPICIOUS

Little Ethel—Mother, isn't environment something we have around us?

Mrs. Kriss—Yes, dear. Why do you ask?

L. E.—Because I heard father say that he had seen a dancer who was outside of her environment.

"GOIN' FISHIN'"

He had been looking over the cards of greeting on the counter for some time, when the saleslady suggested:

"Here's a lovely sentiment: 'To the Only Girl I Ever Loved.'"

"That's fine," he said, brightening. "I'll take five—no, six of those, please."

PAINSTAKING WORKER

Foreman—I thought you said you were an expert bricklayer? You've worked all morning, and now you can go and get your time.

Bricklayer—Have ye any fault to find wit the brick I laid?

Foreman—No, but I thought you might have laid the other one, too, while you were about it.

EDITORIALS

CINCINNATI THE NEXT CONVENTION CITY—A decision has been reached by the Location Committee, and Cincinnati has been chosen as the place for the next annual Canners' Convention. It is said that this city can take excellent care of the Convention, both as to the hotel accommodations and exhibition hall facilities. The first annual Convention under the auspices of the National Canners Association was held in Cincinnati in 1908, and it was a memorable Convention, as many will recall. Cincinnati then entertained the Convention as possibly no other city has since done, as a city. The Baltimore Convention in 1914 may be cited as an exception to this, but the entertainment was furnished mainly by the Canned Goods Exchange and local supply men, etc., though Baltimore did a wholesome share of the entertaining. There is no reflection intended in this upon any other city which has since entertained the Convention, Buffalo, for instance, or any other city, because the Convention has grown too large for a city to actually play host and entertain the gathering. That was not the condition in 1908, when Cincinnati, as a city, actually took the entire body as its guests on one notable evening, in particular.

That Cincinnati will treat the Convention well may be written down as certain. The big, new six-million dollar Gibson Hotel has replaced the old Gibson House; the Hotel Sinton, where headquarters were maintained before, is just around the corner, and there are any number of fine hotels within a small radius, ready and willing to care for all who come.

The exhibition hall is so large and commodious that it will not only take care of the big machinery display, but can house the canned foods display at the same time, so that here all will be under one head.

Assignment of reservations (rooms) will undoubtedly be done as it was last year at Buffalo—that is, with a committee handling the entire matter and bringing to this troublesome question order and expedition.

CANNED FOODS WEEK—There has been such enthusiasm over the coming Canned Foods Week that the committee, composed of all branches interested in canned foods, even the chain stores this time, are able to announce at this early date that the Week will be held in November, 1924, instead of March, as has been the custom. The brokers, the jobbers, the retailers and the chain stores are all behind the move, and it now but remains for the canners, who are the chief beneficiaries of the week, to bestir themselves. It is not very complimentary to the canners to see them lag, even in the slightest, when their friends are willing to put up the money and do most of the work to advertise canned foods, and so increase consumption. The canners are not to be asked for any money, but they are asked to co-operate whole-heartedly and with vigor, and that they will do so this time we are not afraid to promise. Associations and individuals intend to get back of this November drive, and he will be a lonely canner who has no part in it.

One grocer suggests that instead of a week the occasion be made a month—Canned Foods Month. We are not going to discuss this, except to point out the attention it means to this occasion, as an evidence that Canned Foods Week is a real thing in the grocer's life. It rests with the canners to keep it so.

You will also note that the Baltimore Canned Goods Exchange is going into this year's week with both feet. The first time they went heartily into the movement, had the city decorated, a big parade, etc., but in the past two weeks they have taken no interest whatever. Baltimore is going to do her share this time with a bang.

The chairmen of the various Canned Foods Week Committees will meet in Chicago on June 27th, when the whole matter will be more thoroughly threshed out and definite plans agreed upon. This shows the spirit with which all hands have taken hold of this big Canned Foods Week for November, and with all interests working so harmoniously together what is to stop this event being the greatest ever? Will the canners work with them? Well, you just watch them!

HAND-TO-MOUTH BUYING—The well-known brokerage firm of Taylor & Sledd, Inc., Richmond, Va., have written us on the question of our comments last week anent the hand-to-mouth style of buying now prevalent. They say:

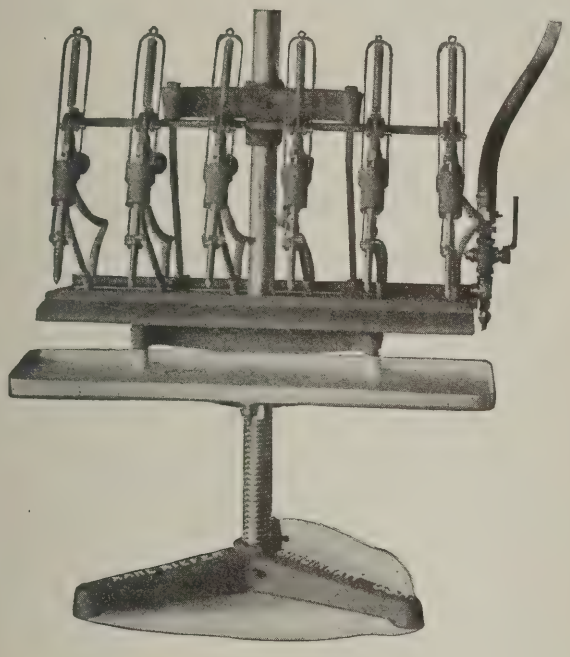
> "The writer has noted with considerable interest your editorial in regard to buying futures for the jobbers. You complain about their buying in a hand-to-mouth way. It has been the writer's observation, as a broker, that the jobbers buy futures quite freely on the items that seem to promise a reasonable chance for them to make interest on the money invested. It would be well for the canners to bear in mind the fact that when a jobber buys a block of goods to be carried from six to eight months before they are sold that it is going to cost him interest on his money and storage to carry these goods. There has got to be some advance in the market to enable him to get a moderate profit out of the goods.
>
> The writer has been told by the jobbers any number of times in the last few years that if they buy goods and carry them six months they generally find that they can go out and buy them for the same price, or less, than they paid for their futures, which simply means that they threw away their interest and six months' storage.
>
> This is not always true. For instance, take the Wisconsin peas. We believe if you will ask the Wisconsin packers they will tell you that their future sales have been good.
>
> We would like to have your comment from this angle."

It sometimes happens that canned foods continue to sell at, or so near, the future prices that there is nothing in it for the wholesaler who loads up on futures; but this is not the general rule. In the great majority of cases futures prove good buys for the wholesaler. It is speculation, of course, but legitimate speculation, and decidedly more uniform in its success than most speculative ventures. Experienced jobbers know this; but there is the other side of the question, and to which we referred last week: the producers cannot afford to take the surplus of Nature, gathered in two months at most, and hold it for the twelve months, while the market takes it piecemeal. The wheat and grain farmers could not afford to do this; why then should the food farmers, without this slight help from those who make money, or do business, on their products? Of necessity there must be co-operation here between the producers and the distributors, and the best co-operation is the sale of futures, at least in moderation.

JOTTINGS—A Kaffir canner wants to know how to can an ox in his own back yard. If someone could devise a means to "can" the "bull" in our own front yards or bailiwicks it might help preserve the country in these days of political pot boiling.

* * *

The first reports from the Maine election, on Monday, the 16th, indicated that our own Senator, "Bert" M. Fernald, was having a hard time to nose out his opponent, and so be returned to the U. S. Senate. Fortunately this was not true, as he really won easily. If the voters cannot see the wisdom of sending a splendid business man, like Senator Fernald, back to the Senate, then our case is well-nigh hopeless. What the country needs more than anything else, more, even, than a powerful President, is more Fernalds in both the Senate and in the House of Representatives; in other words, more good, sound-sensed business men and fewer second-rate politicians. And we hope the country is waking up to this and will make the correction. We have at least one victory, and we congratulate the voters of Maine.



* * *

The industry received a distinct shock when it learned of the death of J. W. Hill, until just a month or so ago President of the Western Canners Association, and member of the Board of Directors of the National Canners Association at the time of his sudden death in Los Angeles on June 12th.

Mr. Hill was a genial gentleman of force and ability and made an excellent presiding officer. He was one of the most extensive canners of corn in Iowa, and was always awake to the welfare and prosperity of the canning industry. His wise counsel and far-seeing advice will be sadly missed.

GOVERNMENT PLANS TO TEST PROPOSED GRADES FOR CANNERY TOMATOES—We are just in receipt of the following notice from Mr. Charles W. Hauck, who explained his plan before canners' conventions last fall:

> "Considerable comment was caused last fall and winter among manufacturers of canned tomatoes and tomato products by the announcement that the United States Bureau of Agricultural Economics had formulated standard grades for cannery tomatoes, which might be used, if desired, as a basis for buying tomatoes from the growers. It was suggested by the Bureau that if the proposed grades were so constructed as to fit into present good commercial buying practice that they would place the canner in position to establish graduated prices corresponding with the quality or grade of the stock delivered. Thus the canner could secure his tomatoes at a cost commensurate with their value for his purposes, and at the same time more harmonious and fairer business relations with the grower would be promoted. Moreover, the grower would be encouraged to produce better tomatoes and to handle them more carefully in order to secure a higher price for U. S. No. 1 and to avoid a discount for U. S. No. 2.
>
> Some canners have evidenced their intention to try out this plan in a small way during 1924, but the disposition in most quarters has been to go slow in making any changes in the buying methods pursued and to await the outcome of further studies of the use of these grades before adopting them.
>
> Consequently, the Bureau is planning to undertake this year some comprehensive tests of these proposed standards in an effort to determine whether or not they are practicable in their present form, and to ascertain what revisions, if any, are necessary to make them meet the needs of the owner and the grocer. These studies will be made in several large factories in New Jersey and Indiana, and it is hoped that arrangements can also be made to include New York State."

FILLING MACHINE

for

Vinegar—Syrups—Fruit Juices—Flavoring Extracts—etc.

The "P" Type Filling Machine, illustrated here, has become a very popular filler with manufacturers whose output does not warrant our larger automatic machines.

It is a simple, sturdy little filler that can be depended upon to do the work right and not give you trouble. Nothing to break or get out of order.

Handles a great variety of bottles. Quickly cleaned without taking anything apart.

We make all types and sizes of filling machines from this simple, inexpensive filler up to fully automatic equipment.

Canned Foods Week In November

All Interests Aroused and A Record Expected—Canners, Wholesale Grocers, Retailers and Chain Stores All to Join in Big Event—Definite Announcement Made.

PRESIDENT Clark's report on Canned Foods Week at the recent meeting of the Board of Directors, and the discussion which followed, confirms and reflects the favorable attitude of the entire industry towards this method of popularizing canned foods. Canned Foods Week had a modest beginning, and there were many doubters, but each year has recorded increasing success. Despite the handicaps of the 1924 Week, there is no question but that it eclipsed its predecessors.

The Board of Directors acted unanimously to continue Canned Foods Week, and favored a convenient week in November instead of March.

President Clark announced that the canners would not be called upon to make individual contributions to the fund. He did urge their personal support and assistance to distributors in encouraging them to do individual advertising.

President Clark presented his thought first to the American Wholesale Grocers Association at its meeting in Dallas, Texas, and second at the meeting of the National Wholesale Grocers Association held in Chicago. Never before has the distributor organizations' membership shown such live interest. The chain store organization has already been invited to participate and its participation will be genuine and sincere. The Machinery and Supplies Association and the Brokers Association will do their full part.

Distributors and canners have agreed on November 8 to 15, 1924, inclusive, as the date of the "week."

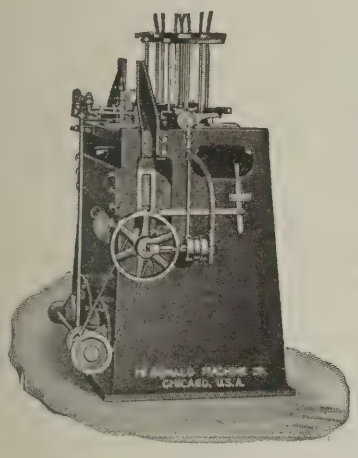
The National Wholesale Grocers Association has named as the chairman of its Canned Foods Week Committee, Mr. Leslie Lieber, Haas-Lieber Grocery Company, of St. Louis, Missouri. The American Wholesale Grocers Association has named as its chairman Mr. T. G. Perfect, Huntington Grocery Company, Huntington, Indiana. The other chairmen will be named within the next few days, and the organizations will commence their active functioning. There will be no delay in the distribution of literature, window decorations, and other forms of dealer helps, which will be furnished to the distributors.

Retailer Suggests a Month Instead of a Week.

The Interstate Grocer, of St. Louis, in the issue of June 14th, under black headlines, carried the following:

> The suggestion made by Royal F. Clark, president of the National Canners' Association, for a canned foods week in November at the convention of the National Wholesale Grocers' Association several weeks ago, is being carried into execution. The machinery which was successfully operated last March is again being oiled and put into shape for another and more pretentious effort later this year and it already is predicted the campaign will be on a more extensive scale.
>
> Coming in November gives added opportunity since the trade will be supplied with the new pack and one of the slogans suggested as an advertising attraction to the housewives is "Stock up your home with new canned foods." Another slogan that is to be strongly emphasized will be "if it's in a can it's fresh." An aggressive effort is to be made in all markets to make this a record breaking event, as since canned foods were adopted each succeeding event has surpassed the previous one.
>
> It was at first planned to begin an active advertising campaign on canned foods to extend over a period of three years, the funds to be obtained from the canners, wholesale grocers, can manufacturers, and canning machinery and supply concerns. President Clark of the Canners Association, stated at the wholesalers' convention in Chicago, however, that it was not timely to begin this advertising this year and suggested a canned foods week in November to take its place.

Retailer Suggests Month Campaign.



He told the wholesalers that the canners would lend every co-operation and would increase the advertising by running a double-page spread in colors in the leading national weekly. In addition, he said the canners would contribute liberally to local campaigns and in other ways would give every possible assistance to putting it over in a big way. He felt confident that with the full co-operation of the distributive trade—retailers and wholesalers—it would mean a tremendous increase in sales of canned foods in which all would profit.

E. S. Berthiaume, who represented the National Association of Retail Grocers at the wholesalers' convention, made the suggestion that it be a "canned foods month" rather than just for one week. His reason for this was that it took many retail grocers a week to become interested and that seven days was too short in which to conduct an aggressive selling campaign and properly acquaint the public with all the variety of canned food items carried by the grocer.

He further said he had found this more productive and followed that plan last March with good success. Being a large retailer in Superior, Wis., and employing 38 clerks, his suggestion carries considerable force. That plan certainly would enable the grocer to reach all of his customers as the particular week decided upon might not be to the best advantage to all customers. They may be short of funds whereas if extended over a month more could be induced to lay in the winter's supply.

The Interstate Grocer talked with Leslie Lieber, of the Haas-Lieber Grocer Co., of St. Louis, who was last year national chairman of the Canned Foods Week campaign for the

COMPOUND APPLYING MACHINE DOUBLE SPINDLE

Being adjustable for all sizes from 2 to 6 inches in diameter, this double machine supplies sufficient compound for any high speed sanitary can making line. Ends are stacked in hopper and are fed, coated and discharged without handling.

Feeding nozzles are self-clearing, and arranged to apply compound only when ends are in proper position. The machine has independent supply to each nozzle from separate agitated reservoirs, insuring proper distribution of compound, also separate control levers for each slide so that one side can be operated independent of the other. Direct connected pressure pump and attachments for one size are standard equipment.

We also manufacture a Disc Dryer to be operated with Coating Machine, which has sufficient capacity to dry compound for all sizes.

McSTAY MACHINE CO., Manufacturers

510 Consolidated Building, Los Angeles

wholesale grocers, regarding Berthiaume's suggestion. He said he had not been notified that he would again be appointed this year, he would take occasion to bring to the attention of those interested the thought of a campaign longer than a week. He was in agreement with the thought that one week was a little too short a time for a strenuous campaign and that a longer period would be advisable.

Arthur P. Williams, who was active in promoting the advertising campaign, and is Foods Week, is already taking preliminary chairman of the New York section for Canned steps to acquaint the trade with the coming event. In a statement issued to the retailers of that territory he points out that the campaign will be backed by the advertising cards and banners and urges retail grocers' associations to appoint a committee to make the necessary preparations.

* * *

Canned Foods Week has taken hold of Baltimore, and she means to go right to the front. President Killian has just made this announcement:

Canned Foods Week Committee, November, 1924 —Pursuant to a resolution of the Exchange to constitute a large committee to insure for Baltimore a successful Canned Foods Week in November, I have appointed the following:

Canners—D. H. Stevenson, chairman, Torsch-Summers Co.; Hampton Steele, D. E. Foote & Co.; E. A. Kerr, Gibbs Co.; J. A. Killian, W. H. Killian Co.; Frank Curry, J. Langrall & Bro.; Eugene Thomas, H. J. McGrath Co.; J. Neuman Numsen, Wm. Numsen Co.; J. O. Langrall, Roberts Bros. Co.; C. F. Butterfield, Webster-Butterfield Co; F. W. Wagner, Martin Wagner Co.

Brokers—J. Cecil Smith, Hanna & Smith; Howard E. Jones, Howard E. Jones & Co.; H. H. Mahool, H. H. Mahool Co.; Thomas L. North, Thomas J. Meehan & Co.; Joseph M. Zoller, Jos. M. Zoller & Co.

Supply—H. W. Krebs, American Can Co.; James F. Cole, Atlantic Can Co.; Robert Rouse, Continental Can Co.; Carl Cooling, Metal Package Corp.; Frank O'Brien, Southern Can Co.; N. D. Dryer, Jr., H. D. Dryer & Co.; F. Watson, Consolidated Paper Co.; Herman Gamse, H. Gamse & Bro.; R. A. Sindall, A. K. Robins Co.; Arthur I. Judge, The Canning Trade.

A big committee for a "big job."

On former occasions the large cities have excelled Baltimore in putting over a "Canned Foods Week" that counted in results, but we intend to get "ours" this time.

Get together. Subdivide the committee into units with a definite responsibility, and if the addition of further members or the extension of the effort to other committees in the state seem advisable—ACT.

W. H. KILLIAN, President.

VIRGINIA CALLS THE TRI-STATES

J. W. Gillaspie Wants to Know How They Make Their Prices—Where Is a Profit to Come From—He Asks Enlightenment.

Bedford, Va., June 17, 1924.

Mr. A. I. Judge,

Dear Sir: I have wondered many times during thee last six to nine months what in the creation was the matter with the Tri-State tomato packers, watching and noticing their quotations on both spot and future tomatoes, as I have in the last several months, I find myself in a position unable to solve the mystery (if I should call it that, and I don't know what else to name it), which caused the packers in the Tri-States, not only to quote, but to sell tomatoes at the prices they have been selling at for the last several months.

The writer well remembers a few years ago, when the packers, not only in Virginia, but in Tennessee, looked upon the packers in the Tri-States with envy, because we considered they got better prices for their product than we did for ours, and in many instances the quality was better, as we had so many small packers in Virginia that did not look upon the quality of the pack as they should have. And we would point them many times to the Tri-State packers. But this situation exists no longer.

The Tri-State packers in the last several months have been selling goods at such a price that it cannot show the packer any profit. For the last four months they have been persistently and consistently quoting and selling future tomatoes No. 2's at 82½c and 85c, and No. 3's at $1.22½ and $1.25 per doz. If they are paying, as we understand they are, from $13.00-$15.00 per ton for tomatoes, the writer is unable to figure out how these packers can make any money at the above figures.

Virginia, which we all know sells tomatoes too low, with practically no profit, started quoting future tomatoes about four months ago at 90c per doz., for No. 2s and $1.30 per doz., for No. 3s. These quotations were in vain, as far as getting any business was concerned, as the Tri-States opened up with a 2½c per doz., lower price. Virginia met these prices, but it was only a few weeks until the Tri-States went 2½c per doz., better on prices, and then it was only a few weeks until the market was too "dead to skin." If the packers of the Tri-States, Virginia or any other state which had been offering these tomatoes at such a ridiculously low price, had stood firm for 90c per doz., they would have much more easily gotten this price than they would to have broken the 85c price.

I would be glad if some of the packers of the Tri-States who know their business, and know how to figure cost and know how to make money, would send me a cost sheet showing how they can pack tomatoes the coming season, 1924, No. 2s at 85c and No. 3s at $1.25 and make money. I would appreciate this very much. If they want it published I will have it published and if they want it kept a secret I will do so.

Crop conditions through Virginia for a tomato pack at this time are not favorable at all. There was an effort made earlier in the year to plant a large acreage in Virginia and larger than what has been planted for the last two seasons. On account of the continuous wet and cold weather, the acreage will not be anything like as large as was expected at one time. About two-thirds of the acreage is set in the fields, but has practically made no progress in growing, the land is weedy, grassy and wet and cannot be cultivated.

In the State of Tennessee, where the writer is interested in the operation of several plants, I believe the prospect for a crop, at this time, is better than it is here in Virginia—the season I consider has been a little more favorable. While it is early yet to predict or tell just what the pack will be, indications are not good for a normal pack at this time.

J. W. GILLASPIE.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

SPENDING WISELY

Spending money wisely has as much to do with success as any other factor in business.

Wise spending is investing your money not with the thought of first costs only, but rather of ultimate results.

The thousands of canners who are investing in the "cleaning service" which always follows the use of

Wyandotte Sanitary Cleaner and Cleanser

are getting these ultimate results in dependable sanitation and practical insurance against preventable losses from swells and spoilages.

These factors show up in the profits of the year and carry the conviction that your order to your supply house for this cleaner is an investment well worth repeating.

It cleans clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

A Digest of Changes Between The 1921 and 1924 Tax Laws

By *H. Archibald Harris*
Certified Public Accountant

(*Continued From Last Week*)

If a taxpayer (other than a corporation) has, in the second year, sustained a capital net loss, the deduction for a net loss sustained in the prior year shall be used in computing the ordinary net income of the second year. If the deduction is in excess of the ordinary net income, such excess shall be allowed as a deduction for the third year.—Section 206 (c) (1).

If a capital net loss is sustained, the taxes shall be computed as follows:

The tax should be computed on the ordinary net income at regular rates. From this shall be subtracted 12½% of the capital net loss.—Section 208 (c).

Rates of Tax—Normal Tax

	1921 Act
Rates for American citizens:	
2% on first $4,000 above exemptions and credits..	4%
4% on next $4,000.....	8%
6% on rest of income.....	8%
Rate for non-resident aliens:	
6% on all taxable net income in excess of $1,000..	8%

Rates for non-resident aliens residing in Canada or Mexico:

2% on (salaries, wages, etc.) first $4,000 in excess of $1,000 plus any credits for dependents.

4% on next $4,000 salaries, wages, etc. (not all kinds of income.)

6% on all salaries and wages in excess of $8,000, above $1,000, plus credit for dependents.

6% on all other income in excess of personal exemptions ($1,000 plus credits for dependents).—Section 210.

Surtax

Surtax begins at $10,000 net income. 1921 began at $6,000.

From $10,000 to $14,000 rate is 1%.

1% is added for each $2,000 until $500,000 is reached.

All net income over $500,000 is subject to 40%.—Section 211 (a).

Returns

Married persons living with husband or wife must file a return if the net income is $2,500. (1921 law $2,000.)—Section 223 (a) (2).

Joint return provision same as 1921 Act, except net income raised from $2,000 to $2,500.—Section 223 (b).

Returns for period less than twelve months:

Commissioner is empowered to make regulations prescribing method of computing tax on such returns where during the fractional part of a year covered by a return the taxpayer has had a capital net gain, sustained a capital net loss or has received earned income.

In cases of fractional returns not due to changes of accounting period the personal exemptions and credits for dependents are prorated.—Section 226 (e).

Tax Paid at Source (Withholding)

Rate of withholding on salaries, wages and other fixed and determinable annual gains of a non-resident alien—6% instead of 8% as under 1921 Act.

Withholding returns due March 15th.—Section 221.

CORPORATIONS

Capital Gains or Losses

Corporations allowed all capital losses.

China Trade Act

Entirely new. Special credits for corporations organized under the China Trade Act, 1922.—Section 263.

Consolidated Corporations

Affiliation established if one corporation owns at least 95% of the voting stock of the other or others, or if at least 95% of the voting stock (instead of "substantially all") of two or more corporations is owned (instead of owned or controlled) by the same interest.—Section 240 (c).

The Commissioner shall if necessary in order to correctly establish income of two or more related trades or business owned or controlled by the same interests consolidate the accounts of such trades or business, such consolidation to be made at the request of the taxpayer as well as at the demand of the Commissioner, which was the only way in the 1921 Act.—Section 240 (d).

Deductions

Dividends not allowed as a deduction include those paid by a corporation organized under the China Trade Act of 1922.—Section 234 (a) (6).

Evasion of Surtaxes

When a corporation holds earnings to prevent payment of surtaxes by its shareholders an additional tax of 50% of the corporation's net income shall be added instead of 25% as in 1921.—Section 220.

Net income means taxable net income plus any dividends received and plus any interest on obligations of the United States which would be taxable in the hands of an individual instead of taxable net income as in 1921.

1924 Act does not allow the shareholders to elect to be taxed

The fact that a corporation is a mere investment company

The fact that a porporation is a mere investment company is prima facie evidence of a purpose to escape taxation.

Exempt Corporations

A local association of employees, the membership of which is limited to the employees of a designated person in a particular municipality and the net earnings of which are devoted to charitable, educational or recreational purposes is exempt.—Section 231 (8).

Benevolent life insurance associations of a purely local character and mutual casualty insurance companies are exempt. Most corporations are not required to be of "purely local character" as was the case under the 1921 Act. To be exempt such corporations must derive 85% of their income from amounts collected from members for the sole purpose of meeting expenses, instead of deriving their sole income from such sources as under 1921 Act.—Section 231 (10).

Gain or Loss—Basis for Determining

If property (other than stock or securities of a company a party to a reorganization) was acquired after 12/31/17 by a corporation in connection with a reorganization and immediately after the transfer an interest of 80% or more in such property remained in the same persons or any of them, the basis shall be the same as if the transferor had sold the property adjusted by any gain or loss recognized at the time of the transfer.—Section 204 (a) (7).

In case of sale of property (other than stock or securities of a corporation a party to a reorganization) acquired after 12/31/23 by a corporation by the issuance of its stock where after the transfer the control of the corporation was in the persons who transferred the property to it, the basis is same as if transferor had sold the property, adjustment being made for any gain or loss recognized when transfer was made.—Section 204 (a) (8).

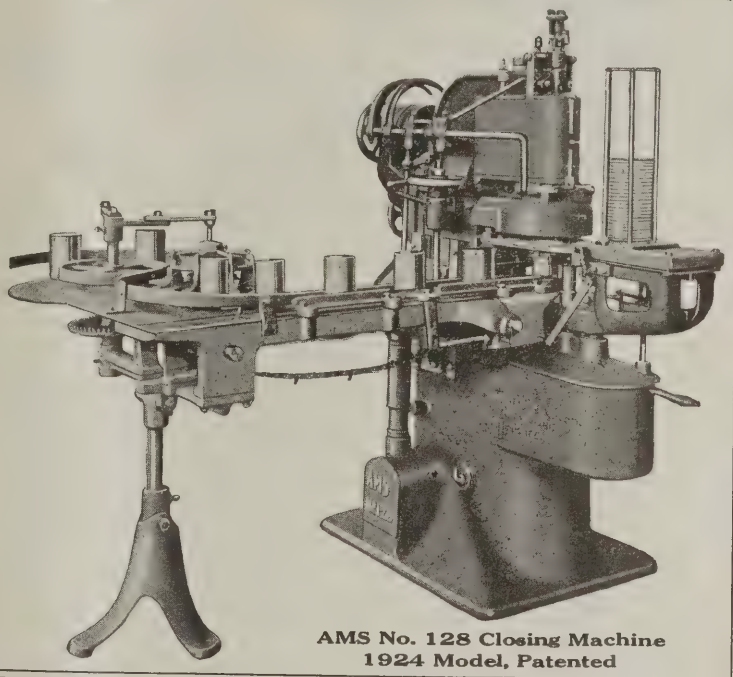
Gain or Loss—Recognition of

No gain, no loss when corporation in a reorganization exchanges properly solely for stock or securities in another corporation which is party to the reorganization.—Section 203 (b) (3).

If the corporation referred to above receives, in addition, other property or money the transaction is not entirely tax-exempt unless the recipient corporation distributes such money or other property in pursuance of the plan of reorganization. If this is done, no gain and no loss.

If, however, the recipient corporation does not distribute it in pursuance of the plan of reorganization, the gain, if any, shall be recognized and shall be accounted for by the recipient corporation, but not in excess of the sum of money and the value of such other property which is not distributed.—Section 203 (e).

Reorganization same as 1921, except that the 1924 act makes the term include a transfer by a corporation if immediately after the transfer the transferor or its stockholders or both are in control of the corporation to which the assets are transferred.—Section 203 (h).



"Party to a reorganization" is defined as including a corporation resulting from a reorganization and as including both

corporation in case of an acquisition by one corporation of at least a majority of the voting stock and at least a majority of the total nlumber of shares of all other classes of stock in another corporation.—Section 203 (b) (2).

Losses—Net

In case of corporations, computation of net losses shall not include dividends allowed as deduction for the tax year.—Section 206 (a) (4).

Personal Service Corporations

Personal Service Corporations are not now recognized. (Was Section 200 (5) of 1921 Act.)

Refunds, Administration

Any income taxes paid by farmer's mutual or other mutual, hail, cyclone or fire insurance companies (if otherwise exempt even though they are not of a purely local character) not outlawed shall be refunded.—Section 1013 (b).

Rates

Corporation income tax rate 12½%—same as 1921.

WHAT THE BROKERS SAY

Indianapolis, Ind., June 11, 1924.

Tomatoes and Pulp—We are withdrawing entirely on tomatoes and pulp on account of the seriousness of the situation due to continuous heavy rains, which has precluded planting.

On account of the freeze, canners were compelled to import their plats. Possibly 50 per cent of these have been lost on account of continuous rains. Many fields are wholly inundated, and creeks and rivers are overflowing their banks, and further rain is threatening. A curtailment of acreage is assured. Will quote only on application.

Sweet Corn—Old packers of corn state this is the worst season they have experienced in thirty years. Only a small part of the acreage has as yet been planted in Indiana. Iowa planted the major portion of her acreage the first three weeks in May, and it is just beginning to show, and there is but 75 per cent stand. Some localities in that State are going to require replanting. The condition in Nebraska is somewhat worse; that is, their corn is not up yet, and more replanting will probably be necessary than in Iowa.

Grimes Canning Co. has but 55 per cent stand. The normal corn pack for Iowa and Nebraska for the past ten years has been approximately 2,500,000 cases per year. The canners in those States have about 75 per cent of that amount booked as futures.

Ohio packers have had the same conditions as Indiana—only four days of sunshine in the month of May, 27 days of cold, rainy weather, unfavorable to germination, and rendering it impossible to plant any quantity.

There is not to exceed 40 per cent of the acreage planted in Ohio, while there should be at least 90 per cent planted. It continues to rain, which makes the situation, indeed, very serious. We can quote but very limited quantity of future corn from Indiana.

1924 Pack Corn

No. 2 Standard, per dozen	$ .95
No. 2 Extra Standard, per dozen	1.05

CONTINENTAL BROKERAGE CO.

Wilwaukee, Wis., June 14, 1924.

Canners report that the weather this week has been ideal and that crops are coming along as well as can be expected, in view of the conditions earlier in the season. Several Northern Wisconsin canners reported that they had at last completed their planting schedules, while a few Southern Wisconsin canners have advised us that they will start packing the latter part of this month.

As the packing season approaches interest in future offerings increases. Our list this week is attractive and should interest the most conservative buyer.

FRANK A. INBUSCH CO.

Wausau, Wis., June 14, 1924.

Wisconsin weather has been running true to form during the past week. It rains nights and Sundays, so as not to interfere with farming operations, and the temperature has been seasonable during the last few days. The writer has just returned from a few days' trip out among the canners. All but a few have completed their seeding, and they will finish up next week.

The growing crop looks fine, although very late, of course. One canner visited had blossoms on his fields on May 28 a year ago. He will have none before June 20th this year. That is the story. The crop is just about three weeks late. It is all a question of weather from now on. Most anything can happen. But whatever does happen, Wisconsin will be among those present—you can bet on that.

Milk has been selling heavily for the last week or ten days. We look for a much stronger market in the near future.

GROCERS SUPPLY CO.

Columbus, Ohio, June 11, 1924.

Corn—At last spot corn is again in good standing with the jobber and consumer. It is out of the "cent" and into the "dollar" class, and from all indications is going considerably higher before new pack corn makes its appearance. The writer predicts that new pack standard corn will be in the dollar class within three months. Last week we could have placed many thousands of cases of future standard sweetened corn with packers at 90 cents. They would have been glad to have them on their books. Today, after the continued storms of the past week, which have most seriously damaged canners' prospects, the majority of the packers are congratulating themselves that they do not have large contracts in hand. Many hundreds of acres of sweet corn must be replanted and will have serious weather conditions at the critical growing period to contend with, besides the ever-present prospect of an early frost which invariably catches late corn. Thousands of acres over the sweet-corn-growing sections of the country and under contract will be "passed up" by the grower, and the ground used for other purposes because of this condition. Seed corn for replanting is almost impossible to obtain and is in big demand. In no section of the country east of the Mississippi River is the soil in proper condition to receive and germinate seed corn. Many packers report conditions similar to those existing in this State, which are that ground is so wet and, with continued showers in sight, that it will not be sufficiently dry for at least a week to ten days to continue planting. Should we have many hot days during July and August when the corn shoots are very tender, conditions will become very discouraging. We have cleaned up a 15,000,000 case pack of corn of 1923 and a carryover of 2,000,000 cases from the year before. Canners will not have a ghost of a chance to produce anywhere near this quantity in 1924, let alone producing a surplus to protect the increased demand which we will experience, because corn is surely coming back into the position that it formerly occupied.

Tomatoes—The same weather conditions described on corn apply to tomatoes. Conditions, however, are somewhat different, as, if the tomato plant gets through the early stages, it can withstand hot weather for a greater length of time than corn. The early settings of plants were "not partially," but completely killed by the severe frosts the latter part of May. Since then it has rained almost daily and the ground too wet to start the replanting. A number of reports reach us today that where plants were reset the heavy cloudbursts experienced through this section and Indiana the past few days have beat down the plants so that many of them will be entirely lost. This condition. as well as with corn, means a heavy added expense to the final cost of production. Number two tins tomatoes of all grades are practically cleaned up, and offerings are very limited. We believe that No. 3s will become active and be in demand by the first of July. All over the heavy tomato-growing districts these conditions have prevailed, and there will be no early supplies of new crop fresh tomatoes for the markets until much later than usual. As canned tomatoes, like corn, are a year-round article of food, with the shortage of early fresh stock the consumption of the canned article will be continued and a cleaned-up market in both 2s and 3s is predicted by the end of the season.

Let us repeat here just a few of the letter and telegraphic communications that have reached us within the past 48 hours:

"Indiana—We had two cloudbursts here, yesterday and this morning. The river is out of its banks, has destroyed 200 acres of our Golden Bantam corn, which must be replanted if not too late when the water recedes and the soil is in condition. Our peas are standing in great pools of water, rapidly turning the vines yellow. Our first corn was planted June 7th, and it will be a week or more before we can resume. It is by far the most

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

discouraging condition ever experienced by canners in this section of the country. Please give us information concerning conditions in Ohio and elsewhere."

"Virginia—Packers write us that they are withdrawing their offerings on tomatoes and string beans because of the lateness in getting these items under way and the continued unseasonable weather conditions. The tremendous amount of moisture has developed an unusual army of worms, which are already creating havoc with the young tomato plants, and later will attack the corn shoots, and if corn comes late, it invariably suffers big damage from worms."

"Illinois—Corn canners are very much upset because all of their corn is coming together and will bunch, and a number of packers have had to plow up and replant from one-third to one-half of their earlier plantings."

The State of Iowa has had a very dry season so far and much replanting has had to be done.

In New York State the conditions are very serious as regards peas—excessive rains and cold weather have prevailed.

From a very conservative operator in Wisconsin we have the following:

"Our greatest fear is that peas will all bunch, making it impossible to handle them properly. Seeding was delayed beyond the usual time, and the ground was not as well prepared as it would have been had we had favorable weather. Summing it all up, it looks very much like a conspiracy on the part of nature to prevent the canners from overproduction this year.

F. L. DUTTON CO.

Aberdeen, Md., June 18, 1924.

Tomatoes—Spot No. 2 tomatoes are virtually cleaned up. We have one car left at $1.20 per doezn if unsold. Can still get 1s at 60c and 3s at $1.35, packers' labels. We have one straight lot of 5,000 cases 3s, first-class quality, available for buyers' labels, at $1.40 per dozen. The No. 10 size, which has been somewhat neglected, is now receiving attention. We can get one car at $4.25 per dozen, Baltimore rate, and one car at $5.00 per dozen, ex-warehouse Chicago, Ill.

The future situation is firmer, although we are now having some "long over-due" seasonable weather. A great many packers are well sold up on futures and are temporarily out of the market. While there is no pressure to sell future tomatoes, the range of the market is about as follows: 1s, 55c to 57½c; 2s, 85c to 90c; 3s, $1.25 to $1.30, 10s, $3.90 to $4.00, f. o. b. respective shipping points, for shipment when packed.

Corn—The backward spring has created quite a little interest in the spot corn market. A number of lots were cleaned up this week. We have left about 1,500 cases fair standard crushed sugar corn at 90c per dozen, if unsold. We also have about a car of whole-grain shoepeg corn at $1.25 per dozen, and about 180 cases fancy shoepeg corn at $1.50 per dozen, f. o. b. county.

Most packers are out of the market on future corn, but it is still possible to place orders for limited quantities at $1.15 for standard shoepeg, $1.25 for extra standard shoepeg, $1.35 for fancy shoepeg, and 90c to 95c for standard crushed sugar corn.

C. W. BAKER & SONS.

A KAFFIR OF AFRICA TO CAN

THE following letter was received by the well-known can making machinery firm of Brooklyn—E. W. Bliss Co., and by them sent us. It illustrates how widespread has become the urge to enter the canning field, and some other things. Some of our supply men should answer him in detail.

Como, Thika, Kenya Colony,
(British East Africa),
March 23, 1924.

The Manager E. W. Bliss Company,
Brooklyn, N. Y.

Dear Sir:

Your American consul in Nairobi suggested that I should write to you on the subject of canning.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

LANSING B. WARNER, INCORPORATED
155 E. Superior Street,
Chicago, Illinois.

Now I like writing to American firms, because they always answer questions, no matter how foolish, and they don't make you feel a worm if you do not, in the end, buy something. I expect they think to themselves "Next time perhaps, this man will buy, and we won't frighten him off from trying somewhere else."

You see, in this new country, where the white people altogether are only ten thousand, we have not got the local markets which are so useful to start people on industries which later may become export industries.

What we really want to know is, "What can we produce that is worth canning?"

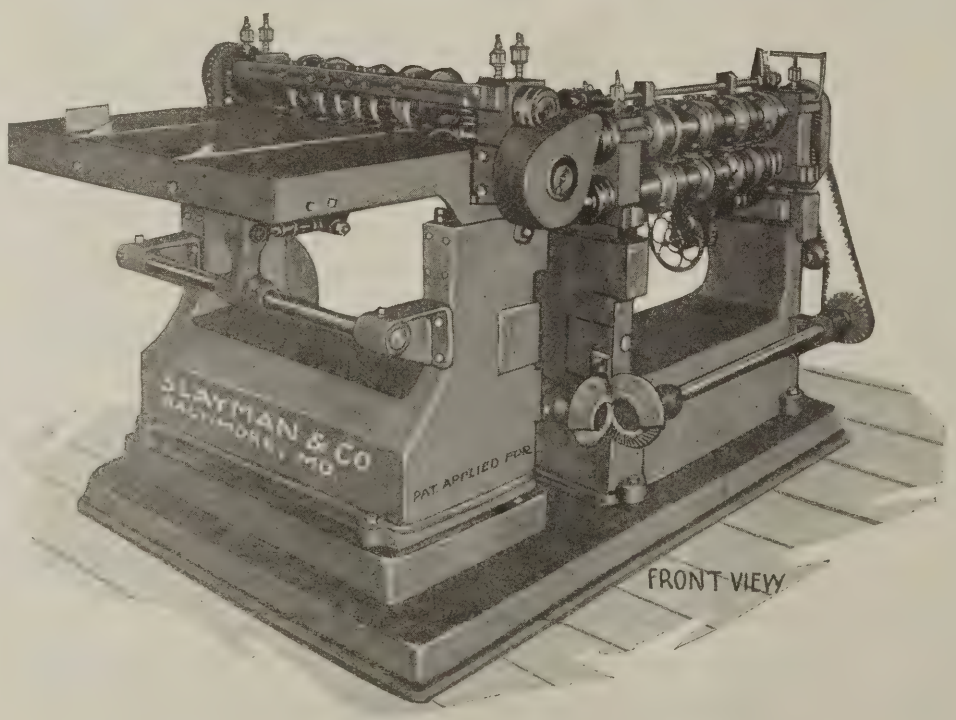
Can you give us a start in the right direction?

We can grow good second class beef in quantities, and a fair amount of grade stock, but everybody says the first sort won't pay to can because it is not good enough, and the second wont pay because it is too expensive.

Can you tell me **how to can a bullock in my back yard**, or is that outside and beyond the range of your line of goods?

If I could do that I might be able to start a local industry.

I can grow excellent pines (smooth cayenne and Queen), but a couple of hundred pines floods the small local market. But if I could can four or five thousand in the year, to start with, I might be able to work up enough local industry to pay me for planting the pines. And gradually, I could extend to a larger plant, and an export business.



Some time ago I planted a quantity of peanuts, and had about a couple of tons on hand, with no sale for them. So I wrote to U. S. A. for a peanut butter machine, to try to make peanut butter for the local market. The man I wrote to had quite a lot of trouble to get a small enough machine, and at last he dug out one costing about two or three pounds, the sort you used to use in grandfather's days.

Well, that gave me a start, and I shelled lots of peanuts, and we roasted them beautifully, and ground up quite a quantity of nice peanut butter and then nobody wanted the stuff, not even when it was given away to them by their grocers. It was quite as good as the Heinz stuff in glass jars, and I was offering it at a quarter the price. So I fed the rest of my peanuts to my pigs, and concluded that I had bought my experience of nut butter machinery pretty cheaply.

I am a coffee planter really (sat one time on the staff of "East African Standard"), but but all coffee planters would be glad of side lines to keep their labor employed in the slack times, or to make a little extra money to pay their labor bills.

And there are many farmers up-country who don't know what to do with their cattle. There are about three million head in the country, mostly small "zebu" native stock.

SLAYSMAN DUPLEX TRIMMER—SLITTER

Trims the sheet absolutely true, and drops it onto the feed bed of the Slitter where it is cut into the desired sizes—2's 3's 10's etc.

THE TWO OPERATIONS —TRIMMING and SLITTING—IN ONE.

Speed 60 to 90 sheets per minute, depending upon the operator. Saves labor, handling, time, and floor space.

Built on rigid base to stand strain. Guaranteed.

And there are a few farmers who don't know what to do with their farms, or what to grow on them for profit, being far from the railway.

And now I've got so far, I expect you will be thinking that my talk is shear waste of time for you to listen to, or to read.

But still, if you have some literature on such a subject as "Canning for the small proprietor." "How shall I begin to can?" "Does a small canning outfit pay?" "Why I started canning, and what it led to." You might send it along with your best wishes.

Why don't some of you Americans come over here to look us up? Lots of big game, and also lots of opportunities for investing money on the lines of your fine Western States. And we have no cash for development. You have it all in the States.

One good thing you have over here, and that is a very useful consulate, always helpful and obliging.

Now I think I have taken up enough of your time, so I will conclude my letter of inquiry.

Yours faithfully,
SEYMOUR H. C. HAWTREY.

ANNUAL MEETING OF NATIONAL KRAUT PACKERS' ASSOCIATION

Nichols Inn, Clyde, Ohio, June 12, 1924.

President W. W. Wilder called the meeting to order at 10.45 A. M.

The minutes of the last meeting were read and approved.

The application of C. M. Bogle Company, of Seattle, Washington, was presented and, upon motion, was accepted.

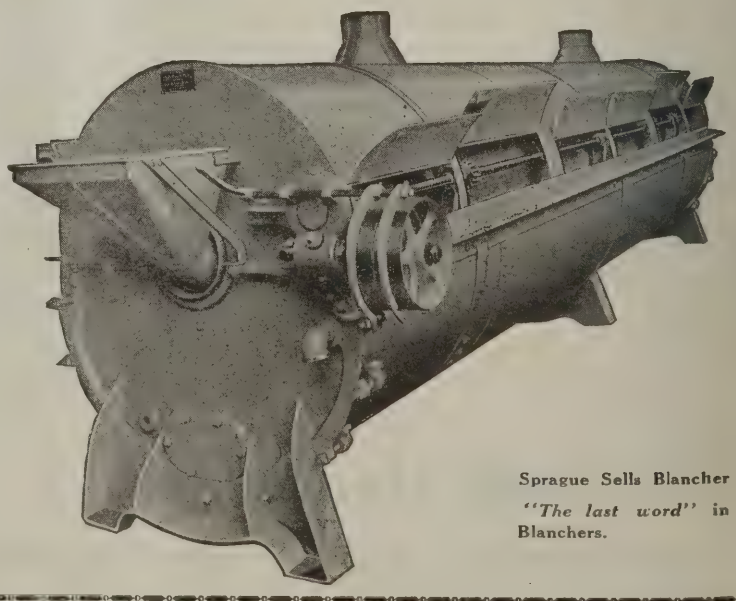
The President, in his address, said that sixteen years ago there was a meeting of the kraut packers held at the same hotel, at which time they founded the National Kraut Packers' Association. He further recalled that Mr. John McCaskey, of Pittsburgh, now deceased, was the prime mover in bringing it about. This was corroborated by some of the old members who were present. Also that the Association had grown from a few members up to quite a substantial membership, and he was glad to see so many present at this meeting.

The President appointed a nominating committee consisting of W. H. Knox, of the Wilson Packing Company, and E. Naylor, of the Castle Company. The President described the new Seed Company in detail and hoped that all members would subscribe for the stock at an early date in order to assist in the great work of producing disease-resistant cabbage seed.

If

"We have had some seasons when we did not finish our planting in May, but the delayed planting was always the late varieties; but in the present instance there are still some of the Alaska peas to be planted, and unless the growing and canning season is cool and backward, there is bound to be much bunching and consequent congestion in Wisconsin this year."

Clipped From May 24th issue of Canner.



Peas are bunched and come with a rush, how many will you lose?

There's still time to get another Blancher to you, or another ***complete*** line of pea machinery, to enable you to get your ***whole*** crop into the cans even if it comes in bunches.

If ***your*** crop is bunched the probable ***loss*** through being unprepared ***will more than equal the entire cost of the new line.***

PEERLESS

STURDY MACHINERY BACKED BY SERVICE — PHCo

This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

The Secretary-Treasurer read the financial report as audited and made up by E. H. Erdrich, of the Bellevue Kraut and Pickling Company, and A. J. Haakenson, of the Fremont Kraut Company. It was moved that the report be accepted. Seconded and carried unanimously.

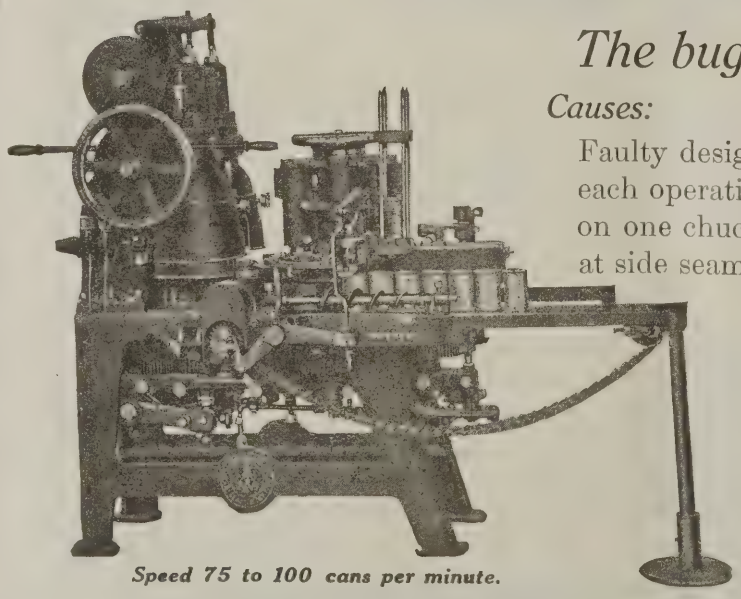
Mr. Wm. Clendenin, of the Conover-Mooney Company, gave a splendid address of advertising, and said, in part, that there was a manager of an athletic club in a certain city who was now advocating sauerkraut diet for all his members and had the following sign hung up by the pugilistic ring side: "To Win That Bout, Don't Forget Your Kraut."

Mr. Mooney stated some of his recent experience with people who said that some of them had just begun to serve sauerkraut, and he stated further that on traveling about the country whenever diet became the subject, sauerkraut was invariably mentioned.

The Secretary then read many letters from consumers, giving their experiences on sauerkraut diet. Commenting on the letters, one of the members stated that he had been packing kraut for thirty years and had always been bothered with stomach trouble and insomnia, and it was necessary for him to watch his diet at all times. Last Christmas he and his wife were visiting and he was compelled to eat what was set before him. On their return home, he was unable to sleep. He told his wife that there must be something in sauerkraut which has been so thoroughly advertised, and he a large contributor at that. So he was determined to try it, and his wife has been serving it in many ways regularly since Christmas, and now he is feeling like a new man. This brings out the fact that even though some of the members who have packed sauerkraut for years, they are just beginning to learn of its health value.

An ex-president of the National Canners' Association was present, Mr. W. J. Sears, and was called upon for remarks. He paid a great tribute to the work of the Association and the advertising campaign, and said, in part, that it was a great surprise to him to know that so much good had been done towards popularizing sauerkraut.

The question of the Association entering into and securing the services of a chemist for research work was then discussed. It was moved that two more members be added to the original research committee. Seconded and carried unanimously. The President then appointed Mr. Al Slessman and Mr. L. A. Colton. The present research committee is composed of A. A. Huppert, chairman; Emil Hamilton and Martin Meeter.



The nominating committee reported the officers for the ensuing year, W. W. Wilder, president; B. E. Babcock, vice president, and Roy Irons, secretary-treasurer. Directors: Geo. Lang, Brooklyn, N. Y.; Martin Meeter, Lansing, Illinois, and A. A. Huppert, Milwaukee, Wis.

The question of holding the next meeting was discussed. It was moved and seconded that this be left with the option of the President and Secretary.

There being no further business, the meeting adjourned.

SLACK SEAMS!—

The bug bear of the average canner.

Speed 75 to 100 cans per minute.

Causes:

Faulty design of Seaming Head, such as one roll for each operation, causing side strain. Both operations on one chuck, the second if made tight, cutting the top at side seam lap. No spring in second operation to take care of different tin plate thickness.

The TROYER-FOX Non-Spill Closing Machine has separate seaming heads for each operation. Adjustments hold over long periods of time. Two rolls for each operation, the can standing still.

A good, tight seam all the time with no "cut overs". Write for particulars.

The Nested Sample Grader—

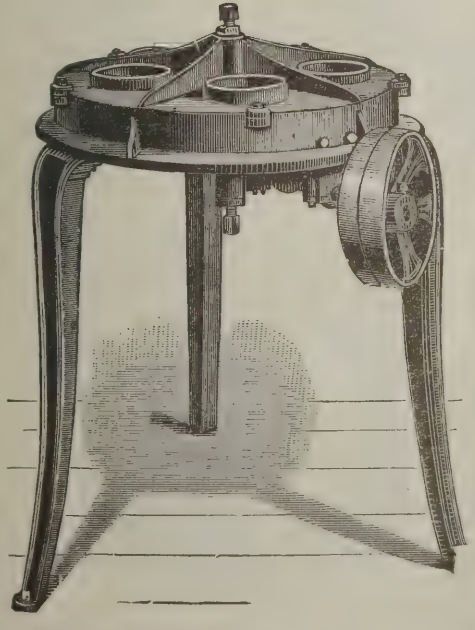
Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.



Manufactured and Sold by

Sinclair-Scott Company

Baltimore, Maryland.

Makers of Nested Pea Graderr, Colossus Pea Graders, and Other Canning Machinery.

Stevenson's Pineapple Slicer.

A machine for the slicing of Pineapples from 3-16 to ¾ of an inch in thickness, and cuts each and every slice even and of the same thickness. It is easily adjusted and is made substantial and durable. It is made either for hand or power. The legs are sufficiently splayed to admit of placing a tub under the machine.

Stevenson & Company, Inc.

Baltimore, Md.

SOMETHING NEW UNDER THE SUN

Fruit Frozen in the Can—An Opportunity for a New Summer Business.

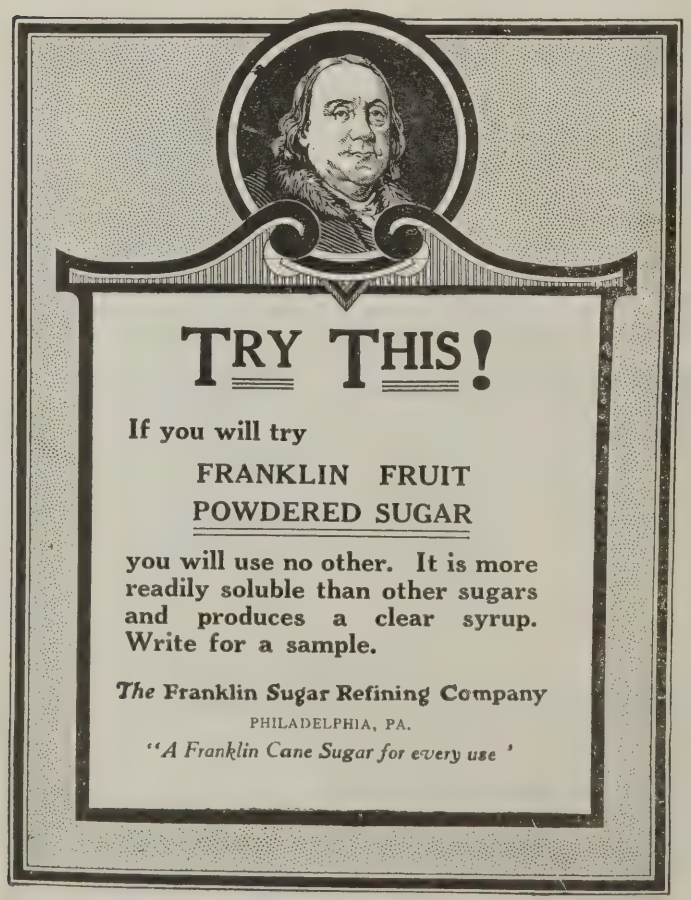
A MID-SUMMER campaign on canned fruits? Enough to make any grocer wonder! But here is a campaign based on a new idea that promises to make canned fruits as indispensable in hot weather as they are in winter.

Thirteen million women are being reached by a special Del Monte advertising drive this summer. They are learning how easily and economically they can have the most delicious fruit ices and frozen salads imaginable simply by freezing Del Monte fruits right in the can.

This advertising will appear in the women's magazines and the Saturday Evening Post during June, July, August and September. Full color pages will illustrate many delicious frozen dainties. They will show by word and picture how these and similar dishes may be prepared without a freezer, without stirring—in fact, with an ordinary bucket as the only utensil.

Here's the story. Just pack a can of Del Monte fruit in an ordinary bucket, with equal parts of chopped ice and coarse or ice-cream salt in layers. Forget it for about three hourss. Then take out the can, dip it for an instant into hot water, punch airhole in the bottom, open the top—and there you have it. As refreshing a treat as ever tempted hot weather appetites.

It's the uniform high quality and even consistency of all Del Monte fruits, together with the fact that each Del Monte fruit is packed in just the proper richness of syrup to make it congeal smoothly, that make it possible to freeze these tempting ices so successfully right in the can. This, plus the fact that the frozen fruit idea, and a Del Monte business builder. The grocer, Packing Corporation, makes this distinctly a Del Monte idea, and a Del Monte bussiness builder. The grocer, therefore, who wants this extra business to come into his store, owes it to himself to look up these advertisements and explain the frozen fruit idea to his customers.



The campaign illustrates forcefully the type of work which is being done all year round to make Del Monte products easier, steadier sellers for every grocer.

PRINCE RUPERT B. C. EXPORTS CANNED SALMON TO U. S.

VERY few shipments of tinned salmon have ever been made from this Consular District to the United States, according to a report received in the Department of Commerce from the American consul at that point. One such shipment in April consisted of 1,800 half cases, 24 pounds to the case. The shippers seem hopeful of establishing a market in the United States. To the ordinary observer, with fresh salmon prices practically the same in American and Canadian waters, it does not seem probable that Canadian canners will be able to compete with the American product after paying the 25 per cent. duty.

IF NOT, WHY THE NAME?

First Hobo—I've decided to become a movin' pitcher actor.
Second Bo—Don't dat take a lot o' pep?
First Bo—Nix. As I unnerstand it, it's de pitchers does de movin.'

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

ATLANTIC CAN COMPANY

BALTIMORE - - - MARYLAND

Just as We Predicted - - It Made a Big Hit.

A greater number of Canners placed orders for INVINCIBLE CORN HUSKERS at the Buffalo Convention than any Convention at which we ever exhibited, — and more are ordering daily.

THE 1924 MODEL INVINCIBLE HUSKER IS LIKED FOR ITS SIMPLICITY.

The demand is going to be big, but we are prepared for it.

Corn worms cannot possibly affect the proper functioning of INVINCIBLE Corrugated STEEL ROLLS, whereas, Rubber Rolls become greasy and they cannot be sterilized with hot steam.

Steel Rolls are sanitary. That alone is a sufficient reason for you to use INVINCIBLE HUSKERS, the only all steel roll Husker.

One price to everybody $375.00 F. O. B. our works.

Invincible Grain Cleaner Company.

Silver Creek, New York.

The Markets

BALTIMORE, JUNE 23, 1924

WEEKLY REVIEW

Better Weather Is Helping Crops and Plantings—Pea Canning Begins on the 'Shore—The Conditions in Indiana—Some Losses Other Growers Have Felt —Changes in Market Prices.

IMPROVEMENT—The past week in this section has shown a considerable improvement over weather conditions of the year to date. There has been a fairly good sprinkling of real sunshine, and some summer heat, and they have helped all crops and the preparation of the soil for the belated plantings. It has not been a week without its rains—there have been some heavy down-pours, accompanied by high winds and even hail, and some unfortunates have felt the effects of these visitations. But, on the whole, and generally speaking, crops have made good progress during the week, the best progress to date.

Looking over the whole crop situation, in all sections where canners' crops are grown upon any scale, the season is accounted three weeks late; that is that the spring is three weeks behind schedule, and necessarily all things with it. Writing from Indianapolis, under date of June 16th, Bert. C. Keithly Co., of that city, who because they are very large suppliers of tomato plants for the canners of that region, are constantly in close touch with growing conditions, said on a postal to their canner patrons:

> We beg to call attention to the item appearing in the Indianapolis Star of June 16th, relative to prediction of Mr. H. A. Brown, Government weather forecaster. Mr. Brown calls attention to the fact that the temperatures are three weeks behind normal and that a drought has already reached some States and is to be expected in this section. It is recommended that canners use liberal amounts of fertilizer, with deep plowing and frequent surface cultivation, in order to force the crops, ward against the effect of the droughts and to get as much of the crop in as possible before the early frost which has been predicted. With this early frost prophesied you know that it means a very short crop in Indiana if the prediction comes true unless extreme measures are taken.
>
> We urge our canners to heed this warning and fertilize heavily so that the crops will mature as soon as possible.
>
> Advice we have from a large canner in New Jersey, from Tomato Canners in Delaware, advice from New York State and from a Baltimore machinery man in the office yesterday are all to the effect that practically incessant rainfall has made the planting of crops, especially tomatoes, over three weeks late and in some sections the ground is not even ready for planting. We understand Kentucky and Tennessee are in a similar condition and that planting in Missouri has been retarded by drought. Utah is also backward.
>
> Urge your growers to fertilize heavily, to cultivate as instructed and to get full data from Purdue and Mr. Wallace, State Entomologist, located at Indianapolis, as to what is best to be done under the present conditions and prophesies made by the Government, confronting Indiana canners.

PEA CANNING BEGINS—They have been canning peas in Baltimore for some time, as previously reported, these peas coming from southern points, and generally termed "steamboat peas." But the real pea-canning season, on the Peninsula and around Baltimore got into motion this week, the crop having finally gotten into condition for the canneries. The weather, as we write, is favorable for this operation, and the quality so far is fine. What the yield will be remains to be seen because it is yet too early to say. There is fear that the high temperatures will rush the crop too much to permit its best handling, as the heat reached a high point this week, and remains with us. Wednesday afternoon saw a small sized cyclone in northern counties and some damage done, but this is in line with the style of weather experienced thus far this season.

Somewhat in the line "that misery loves company," and that canners may know that they are not the only sufferers from these heavy visitations of nature, and likewise as an evidence of the kind of storms which have played havoc with all crops, in many sections of the country, we cite the plight of the tobacco growers on the western shore of the Chesapeake Bay. There are some canneries there, and it is but a slight distance from the great mass of canners across the Bay. But the chief crop of these farmers is tobacco, and they produce a fine quality, mostly used for wrappers. One of these whirling storms struck this section a short time ago, washing the crops from the ground, blowing down trees and in a comparatively small area blew down 65 tobacco barns, exposing the drying crop of last year, now ready for the market, and ruining it. Last year tobacco prices ruled low, averaging about 25c; this season, the buyers had just come into the market, and one man of the many had sold some of his crop at 60c, when the storm struck and wiped out the crop ready for sale. Here is crop hazard with a vengeance.

THE MARKET—The uncertain outlook for the 1924 corn crop and pack has brought buyers to regard this item with considerable interest, and the demand has been fairly brisk lately. The West has shut down on further futures, and has tightened its prices. with $1.00 now in the back, and the East is following suit. As a result, corn prices in this market have advanced this week, standard shoepeg advancing to $1.15; standard crushed to 95c, as low, with many holding for $1.00, and extra standard quoted from $1.05 up. Spot corn can command its own price from now on, as new packed cannot reach the market in time, before it is bare.

On the other hand, new packed pea prices show a slight decline from previous quotations. No. 1 sieve are quoted at $1.75 up; No. 2 sieve at $1.60; No. 3 sieve $1.45; No. 4 sieve $1.20,

and No. 5 sieve at the same price. There is always a drop in prices when the new packed goods first come upon the market, though why there should be in the case of peas this reason is hard to explain. California has been able to deliver but 45 per cent pro rata on pea contracts, and the market is hungry for canned peas. Some regions of Wisconsin are reported as possibly able to begin canning the end of June, but that State and New York will hardly get well going before well into July.

New spinach prices are also noted, this time an advance over previous quotations. No. 2 is now quoted at $1.05, No. 2½ at $1.40, and No. 3 at $1.45, with 10s quoted at $4.50.

Tomatoes have moved up all along the line. No. 2 standard are quoted at $1.15, but they cannot be bought for this price because they cannot easily be found. But if anyone has any he can demand and receive $1.25 for them if they are good standard quality. No. 3's have moved to $1.40 as bottom, but here again it is more of a quotation than the price at which any holder of good goods will part with them. Such goods are worth $1.50. No. 1's have moved up to 60c and 65c, with holders asking more. The supply of tomatoes is growing visibly less and may soon be a thing of the past.

New quotations on blackberries are made at $1.25, and No. 10's at $7.50. This constitutes the only change in fruit prices, but interest is increasing in fruits and may be expected to continue. The fruit crops are not escaping the troubles all other crops are having. California has named opening prices on fruits and the prices are received as very acceptable to the buyers, and much good business is reported.

NEW YORK MARKET

New Packed Fruits Hold Stage—New Prices Higher Than Last Season—The New Prices—New Hawaiian Pineapple Prices —Salmon Business Better—The Demand for Sardines Better—Shrimp Is Strong—Tuna Improves— Western Future Tomatoes Very Scarce— Buyers Showing More Interest in Future Corn—California Delivery Cut 45% on Peas.

New York, June 19, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

FRUITS HOLD SPOTLIGHT—New pack canned fruits have held the spotlight in the local market during the week, the anouncement of opening prices for the general line of fruits on Monday by the California Packing Corporation, together with the naming of prices on 1924 pack Hawaiian pineapple by other packers, keeping the market on the jump.

Prices Higher—Prices on California fruits are somewhat higher than for last year, and in a few instances the prices are over those which the trade had anticipated. The following is the California Packing Corporation's basis, the choice grade being its featured Del Monte brand:

	No. 2½s			
Variety	Standard	Choice	Seconds	Waters
Apples	$1.95	$2.25	$1.70	$1.45
Apricots	1.80	2.50	1.55	1.40
Apricots, peeled	1.95	2.70	1.55	1.45
Blackberries	2.05	2.90	1.90	1.75
R. A. Cherries	2.50	2.90	2.15	2.00
Black Cherries	2.50	2.90	2.15	2.00
Muscat Grapes	1.65	2.30	2.45	1.35
Y. F. Peaches	1.75	2.30	1.50	1.40
Y. C. Peaches	1.95	2.45	1.70	1.60
Y. C. Sliced Peaches	1.90	2.40	1.65	1.45
Bartlett Pears	2.60	3.05	2.40	2.05
Egg Plums	1.50	1.90	1.30	1.15
Green Gage Plums	1.50	1.90	1.30	1.15

Prices Unexpected—The naming of prices on the general line of the 2½s California fruits was something in the nature of a surprise for the trade, as it had not been expected that these prices would be made known until late in the month. The prices have been received fairly well on the whole, and it is reported that considerable business has been done on peaches for early shipment. Pears and cherries are considered rather high by the buyers, and the market for cherries in particular has been neglected. The carryover of old pack cherries is a factor in the situation.

Gallon Fruits—Opening prices on No. 10 fruits were also named by the Corporation, the basis being as follows:

Variety	Standard	Choice	Water	S. P. Pie
Apples	$6.40	$7.40	$....	$....
Apricots	6.40	7.90	4.65	4.65
Apricots, peeled	7.15	8.90	5.15	5.15
Blackberries	7.15	9.15	6.15	6.15
R. A. Cherries	9.40	10.90	5.90	5.40
Black Cherries	9.40	10.90	5.90	5.40
Muscat Grapes	5.65	6.90	3.90	3.90
Y. F. Peaches	5.40	6.65	3.90	4.15
Y. C. Peaches	6.40	7.90	4.65	4.65
Y. C. Sliced Peaches	6.15	7.65	4.50	4.50
Bartlett Pears	8.40	9.90	5.65	4.15
Egg Plums	4.65	5.90	3.40	3.40
Green Gage Plums	4.65	5.90	3.40	3.40

All of the above prices, both on 2½s and 10s, are, per dozen, subject to the provisions of the regular canned foods contract. Prices are f. o. b. Pacific Coast docks, and are subject to confirmation and approval of assortment. On the Del Monte brand prices on the numerous fruit specialties were also made, fruits for salad opening at $2.22½ for No. 1 tall, $2.80 for No. 2 tall, and $3.80 for 2½s.

New Hawaiian Pineapple Quoted—Opening prices on new pack Hawaiian pineapple were also named this week. These prices had been looked for late last week, but were delayed. The California Packing Corporation and Libby, McNeill & Libby's prices are identical, while those named by the Haiku and Hawaiian Pineapple Co. are lower. The prices are as follows:

Size and Grade	Cal. Pkg. Corp. and Libby	Haiku	Hawaiian Pineapple Co.
Extra Sliced			
No. 2½	$2.75	$2.60	$2.60
No. 2	2.30	2.15	2.15
No. 1 tall	1.60	1.55	1.55
No. 1 flat	1.50	1.45	1.45
No. 10	10.00	9.50	9.50
Standard Sliced			
No. 2½	2.40	2.35	2.35
No. 2	2.05	2.00	2.00
No. 1 tall	1.45	1.45	1.45
No. 1 flat	1.35	1.35	1.35
No. 10	9.50	9.00	9.00
Broken Sliced			
No. 2½	2.15	2.10	2.10
No. 2	1.75	1.75	1.75
No. 10	8.25	8.00	....
Broken Pieces			
No. 10	....	....	8.00
Extra Crushed			
No. 2½	2.45	2.35	2.35
No. 2	2.10	2.00	2.00
No. 1 tall	1.50	1.45	1.45
No. 10	9.50	8.75	8.75
Standard Crushed			
No. 2½	2.35	2.25	2.25
No. 2	1.95	1.90	1.90
No. 1 tall	1.45	1.40	1.40
No. 1 flat	1.30	1.27½	1.29½
No. 10	9.00	8.25	8.25

More Salmon Business—Warmer weather has brought out a little more demand for salmon, and offerings of pink at $1.35 per dozen, ex-dock New York, were reported as meeting with some response from the jobbers. The demand for reds, chinooks and chums was quiet.

Sardine Sales Better—Demand for sardines has picked up somewhat since the recent reduction in prices. Jobbers are not buying in advance of their requirements, however, owing to the unsettled condition of the market at Eastport and other Maine packing points. California sardines are beginning to attract a little more attention in this market.

Shrimp Strong—A strong market for shrimp is reported, with offerings for cannery shipment generally limited to small quantities. The market is quoted at $1.09 to $1.95 per dozen for No. 1s, wet or dry, locally.

Tuna Movement Increases—The warmer weather has also stimulated the call for tuna on the spot position, and a better feeling is evidenced all around. The retail trade has permitted its stocks of this fish to run very low, and is expected to be in need of fairly large qauntities to take care of the usual summer business.

Tomatoes—Indiana canners report that they are still engaged in having their growers replant to replace those plants which were destroyed by recent frosts. Most of the freeze was in the northern section of the State. Few Indiana tomato canners are offering additional futures at this time, and the market is nominal as to price. The season in the Tri-States is from two to three weeks late, but by delaying planting the growers have avoided considerable weather damage. Southern packers

continue to quote the futures market as follows: 1s, 55 cents; 2s, 85 cents; 3s, $1.25; 10s, $3.85, all per dozen, f. o. b. peninsula factory. The market for Baltimore is 2½ cents per dozen higher on 1s, 2s and 3s, and the same on 10s. Trading was reported slow and routine during the week.

Corn—Midwestern canners continue to quote futures standards at 95 cents per dozen, factory, and Southern packers are quoting 87½ to 90 cents per dozen on this grade. Buyers were showing a little more interest in offerings. Fancy Minnesota Crosby is quoted at $1.35, f. o. b., with Maine canners holding the market on fancy Crosby at $1.45 per dozen, f. o. b. cannery.

Peas—The California Packing Corporation is making a 45 per cent. pro rata delivery on medium and large siftings of peas, while another prominent coast pea canner is delivering 25 per cent on No. 10s and 60 per cent on No. 2 tins. The season in the Mid-West is very much behind schedule this year, and packers are well sold up. Should unforeseen weather developments occur, heavy pro rating is to be expected from this section of the country as well. Southern canners quote new pack peas as follows: No. 2 standard, 1 sieve, $1.60; 2 sieve, $1.50; 3 sieve, $1.27½a1.30; 4 sieve, $1.17½a1.20, and 5 sieve, $1.10. Extra standards are quoted at $1.90 for 1 sieve, $1.50 for 2 sieve, $1.35 for 3 sieve, and $1.27½ for 4 sieve, all per dozen, cannery. Baltimore packers are in position to make prompt shipment, while the peninsula packers are offering for shipment within a fortnight after the order is booked. Buyers needing early peas have been showing some interest in Southern pack.

Offer New Tuna—Opening prices on new pack California tuna fish were named today by several leading packers. The prices vary somewhat, but those of the Van Camp Sea Food Co., which are representative, follow: Whitemeat, ones, $19; halves, $10; quarters, $6.25; Bluefin and Yellowfin, ones, $13; halves, $7; quarters, $4.50; Italian style tonno, $10.50 for paper labels, and $11.50 for lithographed tins, all prices per case, f. o. b. cannery.

CHICAGO MARKET

Some Buying—Some Carload Buyers, but Not Many—Futures Said to Have Been Bought Better—But Few Tomatoes to Be Packed in Michigan This Season—Good Crops of Cherries—Buyers Want No. 2 Tomatoes—Hawaiian Pineapple Prices Please.

By "Wrangler,"
Special Correspondent "The Canning Trade."

Chicago, June 20, 1924.

SOME BUYING—The brokers report that the wholesale grocers are buying spot canned foods for immediate delivery freely, but that they are buying them in small quantities, though frequently, the same old policy that has been prevailing for two years.

It is a policy that is reducing the brokerage business and the wholesale grocery business, so far as the handling of canned foods is concerned, to an insignificant and trifling volume.

Some merchants are still buying spot canned foods in carload lots and 1,000-case lots, but nearly all of them are preferring to buy in anywhere from 25-case to 100-case lots, and have pursued this policy for two years past. They have brought canners and brokers to the verge of exasperation and almost to the verge of desperation.

It is reported, however, by the brokers that the buying of futures this year by the wholesale grocers has been on a rather liberal scale, and that when the 1924 pack of canned foods is ready for delivery, transactions and distribution will begin to look like old times.

Those of the wholesale grocers who have bought futures in canned foods of the 1924 pack this season will in all probability profit by their good judgment, for it now looks as if nearly everything in canned foods would be a short pack this season from various causes; in some sections from drought, but in most sections from too much wet weather and too much cold weather and a too late spring and shortened growing season.

Michigan canners are going to hold a meeting this week at Muskegon, so I have learned, of an executive character for consultation in relation to the condition of crops, and in my next communication I may be able to give you some information in relation to at least whatever information they care to make public.

There will be very few tomatoes packed in Michigan this year. Planting season has almost passed, and very few plants have been set out, and those that have been put out have declined to grow, mistaking the spring for wintertime.

Cherries—Michigan expects a good yield of red pitted cherries, and the canners of that State are making rather attractive prices on cherries in No. 2 cans syrup and juice and in No. 10 cans in juice for pies. The prevailing price just at present on No. 10 red sour pitted cherries in juice is $8.00 per dozen, f. o. b. Michigan. I understand that New York canners are pricing No. 10 cherries at 50c per dozen higher.

There is rather an urgent demand for No. 2 standard tomatoes for immediate delivery, but prices in the East have advanced so fast and so high that our buyers can no longer go to Maryland and Delaware for their supply. They are now looking for them in Missouri, Kentucky and Tennessee. The tomatoes that were obtainable from Florida early in the season have all been sold and none are now to be had.

It looks as if the buyers will have to turn their attention to No. 3 size tomatoes which are quoted in Maryland, I understand, at $1.30 to $1.35 per dozen, whereas No. 2 size are quoted at $1.20. I learned that some are buying the No. 3 size instead of the No. 2 size.

The Hawaiian pineapple people announced their prices this week on their output for 1924, and the wholesale grocers are very much pleased to find that they have made a concession below the price of 1923 opening of about 12½ to 15 per cent on the average.

The reason, I understand, for the concession is that there is a crop of pineapple plants which come into bearing the second year after being planted and will bear heavily this year, and the supply of pineapple will be rather more plentiful than in previous years.

There is another instance in which the canners of the United States are to be commended for their good sense and good judgment in meeting conditions where the purchase power of consumers is decreasing through lack of manufacturing employment to some extent, and though the unprofitable situation of our farming population, thereby giving, when they have been able to secure raw material at lower prices than last year, to the consumers the benefit of the reduction.

This, of course, has not been possible with many lines, like peas, corn and tomatoes, because the canners in those lines not only have had to pay prices for raw products equal to those of last year, but they have had to add to their prices the increased cost of tin cans. Generally the canners of the United States have been very patriotic and reasonable in making their prices on canned foods for 1924 so as to meet conditions and show their disposition to be helpful to all the people—their customers.

ST. LOUIS MARKET

Market Very Dull—Supplies in Jobbers' Hands Lower Than Ever—Every Item Wanted—Low Prices and Qualities Sought—Pea Situation Tense—Corn Is Quiet—Tomatoes Slow Sellers—Some Items Are Especially Wanted—Big Strawberry Canners of the Ozarks.

St. Louis, June 19, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

THE MARKET—There is nothing much doing in canned foods. The market is very dull and the volume of business is limited. Even the largest distributors are purchasing small stocks, and the bulk of their purchases are on the spot. Stocks are down about as low as they can go, and the largest distributors have a smaller reserve of all lines of canned foods than they have had at any time for this season of the year for many years. There has been a clean-up of nearly everything, and if it is not so now, there will be before the new packs are needed. The goods wanted by distributors are ior nearly every item on the list, and the general preference seems to be for the cheaper lines and lowest prices, and those that appear to the economical buyer, whether at retail or wholesale, and which can be offered as specials at the retail stores. Lines that are supposed to be luxuries or higher priced are not wanted.

Peas—There is considerable concern over the pea situation, and the outlook is not promising. Spot peas are scarce, as new packesr have not been much of a factor as yet. The South has started its pack, and advices state that conditions are better than those of New York and Wisconsin. Wisconsin canners are pessimistic. The cold weather has retarded the development of the crop. Early deliveries are wanted because of the small holdings.

Corn—Corn is quiet and standards are steady. Fancy is firm and in good demand.

Tomatoes—Tomatoes continue to be slow sellers, with most of the calls for No. 2s. The majority of the holders are firm. No. 3s and No. 10s are on the market.

Miscellaneous—Succotash is wanted, but is scarce, and slight premiums are paid for the better grade. Spot string and stringless beans are short, and some anxiety is manifest concerning futures. Beets and other lines which have been considered as of secondary importance are now being generally called for. Limas, pumpkin and sweet potatoes are of considerable interest in trading. Spots are nearly all gone. Generally the situation is strong.

Fruits—California standard clings are the most popular items in fruits. Indications point to a shortage. Spot offerings include assortments of choice and fancy grades, which are not of much interest. Pears are scarce. Cherries have improved on spots, but they move rather slowly on future contracts. Red sour pitted cherries are scarce, and there is a fair demand for them. Pineapple is in seasonable demand, and spot stocks are moving fairly well.

The size of the strawberry industry in the Ozark section of Missouri and Arkansas is shown by the report of E. A. Ptugh, representative of the Bureau of Agricultural Economics of the United States Department of Agriculture, which reveals that the berries sold in Monett and Neosho at auction this season alone amounted to $1,232,000. This does not include shipments that were made independently of the association and which will swell this total quite a bit. Shipments have continued last week, and the season has been an unusually profitable one despite the heavy rains.

As a feature of the strawberry industry in Monett, and an appreciation of the part the brokers, commission men and growers play in this business to the interest of Monett, a banquet was given here in their honor by the Monett Commercial Club. One of the guests of honor was W. W. Stevens, of Neosho, who believes he is the first man to have ever contracted for berries in Missouri at auction, almost 25 years ago. Since that time he has been one of the regular buyers.

Market Prices—Prices are quoted here as follows, f. o. b. point of shipment:

Corn—	
No. 2 Fancy Crosby, Minnesota	$1.30
No. 2 Gold Bantam Fancy, Minnesota	2.00
No. 2 Standard Evergreen, Wisconsin	1.00
No. 2 Fancy, Narrow Grain, Extra Sweet, Wisconsin	1.20
No. 2 Fancy, Country Gentleman, Wisconsin	1.30
No. 2 Fancy, Country Gentleman, Illinois	1.30
No. 2 Extra Standard Evergreen, Illinois	1.10
No. 2 Standard, Illinois	1.00
No. 2 Standard, Iowa	1.00
No. 2 Fancy, Narrow Grain, Iowa	1.20
No. 2 Standard, Indiana	1.00
No. 2 Extra Standard Country Gentleman, Indiana	1.25
No. 2 Fancy Country Gentleman, Indiana	1.30
Tomatoes—	
No. 2 Standard, Indiana	1.20
No. 3 Standard, Indiana	1.75
No. 10 Standard, Indiana	5.60
Peas—	
No 1 Alaska, Wisconsin, Fancy	2.60
No. 2 Alaska, Wisconsin, Fancy	2.20
No. 3 Alaska, Wisconsin, Fancy	1.75
No. 2 Alaska, Wisconsin, Extra Standard	1.90
No. 3 Alaska, Wisconsin, Extra Standard	1.50
No. 4 Alaska, Wisconsin, Extra Standard	1.40
No. 2 Sweet, Wisconsin, Fancy	2.25
No. 3 Sweet, Wisconsin, Fancy	1.90
No. 4 Sweet, Wisconsin, Fancy	1.60
No. 1 Sieve, Sweets, Wisconsin, Extra Standard	2.00
No. 2 Sweets, Wisconsin, Extra Standard	1.75
No. 3 Sweets, Wisconsin, Extra Standard	1.50
No. 4 Sweets, Wisconsin, Extra Standard	1.45

CALIFORNIA MARKET

Annonucement of Fruit Prices a Surprise—Prices With Growers Not Yet Arrived At—Condition of Crop Below Average—Clingstone Peaches May Be Very Short—The Cherry Crop Harvested—New Pear Specifications and Prices to Growers—Peach Growers Stand Firm—Apricots Will Run Small—Salmon Almost Extinct on the Sacramento Rover —Coast Notes.

San Francisco, June 19, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

FRUITS—Several small canning concerns have been soliciting canned fruit business of late based on the opening prices of the larger interests, a reduction of 10 per cent from the formal prices of the latter being the usual offer. Very little business has been done, the wholesale trade being in no hurry to anticipate its requirements. The announcement this week of opening prices was very much of a surprise, because they were not expected, at least until something more definite in the way of growers' prices was known. To date canners and growers have not been able to get in complete accord on the matter of prices, but it is expected that such differences as exist will shortly be ironed out. Canners expect to pay more for most fruits than they did last season, but in some instances growers have their ideas quite above those of packers.

The Crops—On June 11 the California State Department of Agriculture released a statement on the condition of crops which is having a decided bearing on the market situation. According to this report, the condition of the apple crop is rated at 75 per cent, as compared with a ten-year average of 79 per cent. The lack of rain is held to be responsible for the poor setting of the fruit. Peaches show a 75 per cent crop, as compared with 91 per cent last year and a ten-year average of 86 per cent. In Sutter county, the home of the clingstone canning peach, a 25 per cent is reported. Prospects are listed as being very poor in the southern part of the State, excellent in Placer county, and fair to good in the San Joaquin Valley. The year's crop is estimated at 325,000 tons, as compared with 380,000 tons in 1923. Freestones are making a better showing than are clingstones. The pear crop shows a condition of 68 per cent of normal, as compared with 75 per cent last year and a ten-year average of 78 per cent. Apricots show a condition 65 per cent of a normal, compared with 98 per cent last year and a ten-year average of 69. Plums suffered some loss as a result of the recent heavy winds, and the condition of the crop is rated at 74 per cent, compared with 97 last year and a five-year average of 79. The cherry crop is estimated to be 62 per cent, compared with 75 last year and a seven-year average of 74.

Cherries—A considerable portion of the cherry crop has been harvested, and prices to growers have been well under the prices named by the Cherry Growers' Association early in the season. In but few places has as much as 6 cents a pound been paid for Royal Annes, with 5½ cents probably the average price.

Pears—The California Pear Growers' Association has revised its specifications asd prices covering the sale of pears to canners. The effect of the new specifications and prices is to advance the price of 2⅜-inch and larger pears by $5 a ton to the grower, making this $57.50 a ton, and to reduce the price of pears between 2¼ inches and 2⅜ inches by $5 a ton to a price of $42.50. The original specifications and prices on No. 2 pears remains the same, the change being to give a premium for size and quality. Many growers plan to ship their smaller size pears East and deliver the larger sizes to canners at the increased price.

Peaches—A meeting of cling peach growers was held recently at Yuba City, and it was decided to stand by the directors of the California Canning Peach Growers in the matter of prices to be fixed for the crop this season and to back them up in cooperative canning if canners refuse to pay the prices decided upon. Last year $30 was the price agreed upon, and growers are expecting in the neighborhood of $45 a ton this year, owing to the shortage of the crop, the tendency of fruit to run to small sizes and to improved market conditions. The growers voted to keep the size of No. 1 peaches the same as last year, despite the fact that efforts are being made in some quarters to have the size reduced.

Apricots—Apricots are moving to the fresh fruit markets in quantities, and it will be but a short time until canning operations will be commenced. Very little buying has been done as

yet, but this cannot be delayed much longer. Owing to the fact that not more than 40 per cent of the apricot orchards of California are under irrigation, the fruit promises to run to small sizes and but a comparatively small portion of the crop will be suitable for canning. The crop promises to be about 60 per cent of that of last year, according to estimates of officials of the California Prune and Apricot Growers' Association.

Olives—The California Olive Growers, Inc., is making splendid headway in its drive for membership, and has the desired acreage about signed up. It has adopted the name "Sun-Ripe" for its pack of ripe olives, and the fruit will shortly be offered under this brand.

Salmon—An initiative measure to perpetuate the Klamath River as a breeding place for the king salmon will find a place on the ballot of the November election in California. The once-famous run of salmon in the Sacramento and San Joaquin Rivers is now almost a thing of the past, and the Klamath River is the last stream in this State in which the salmon can find a place to spawn. A proposal to erect a dam in the river near Orleans is bein opposed by the Fish and Game Commission. The salmon-canning industry in this State at one time assumed quite large proportions. It had its beginning in 1864, when John and George Hume and Andrew S. Hapgood commenced operations near Sacramento, putting up 2,000 cases a year for several years. These men changed their base of operations to the Columbia River, but others took up the industry, and by 1882 the pack amounted to 200,000 cases a year. In recent years the largest pack was 22,766 cases, made in 1919.

Coast Notes—Immigration Director Alfred Burnett, of Honolulu, T. H., is considering the application of the Hawaiian Tuna Packing Co. to import 50 expert fishermen from Japan.

Elmer E. Hemrich and his son, A. L. Hemrich, clam packers, of Alaska, were recent visitors at San Francisco, Cal., coming here to make arrangements for enlarging their plant on Kukuk Bay.

Delegates to the convention of the National Association of Retail Grocers at Los Angeles, stopped at San Francisco for two days, and were the guests of the trade in a series of sight-seeing trips and entertainments.

J. H. Bliss, of Libby, McNeill & Libby, Chicago, was a recent visitor at San Francisco.

What Canned Foods Distributors are Doing

Jobbing Business Good—Canned Foods Scarce and Active—Manufacturers vs, Private Brands in Limelight—Illinois Wholesale Grocers Meet—Plan to Help in Canned Foods Week Movement in November—Arbitration Act Has Passed House of Representatives—Harry L. Smith Dies.

JOBBING BUSINESS GOOD—Reports from many wholesale grocers and chain store operators indicate that a good business is being done in the general line of staples, and the industry on the whole is in a healthy condition. The canned foods departments in particular have been showing marked activity, and in some instances sellers have been obliged to inform their trade that they were entirely sold out of wanted items. Practically all of the private label wholesale grocers are being forced to substitute new brands for their current business, the supply of various canned foods which they normally carry for their regular trade being exhausted.

Despite the generally healthy tone of the market, however, the wholesale grocers and chain store buyers continue to operate most conservatively. The fact that this year is a presidential year is having a direct bearing upon the situation. Again, there is a tendency among many of the jobbers to hold off their borrowing this year as long as possible, although money is comparatively easy at the present time.

Private Labels—Considerable discussion has been heard in wholesale grocery and specialty manufacturing circles during the past month regarding the growing tendency on the part of wholesale grocers to feature their house brands against the nationally advertised brands which they carry and distribute.

For a number of years there has been friction between the manufacturers and distributors on this question. Previously, this friction has been caused by the fact that manufacturers charged that the wholesale grocers were not co-operating fairly with their specialty men. Some of the manufacturers charged that after their specialty men had secured an order from the retail grocer, and the order had been accepted and passed along to the wholesale grocer for filling, the wholesale grocer would substitute his private brand on the order. The wholesale grocers were guaranteed their profit on all specialty orders turned over to them, bearing the seal of the American Specialty Manufacturers' Assocaiton, but even so, the difficulty continued. Dur the past few years, wholesale grocers have complained against alleged unethical practices on the part of the specialty men. According to some jobbers, the specialty men would come into a certain territory, canvass the various jobbers until they found one who would cut the established price, and then go out and sell the retail trade at this cut price thus "killing" the market for other wholesalers who were selling, or trying to sell at the regular established resale prices. The manufacturers have done everything possible to stamp out this evil. Latterly however, there have been indications that the wholesale grocers have not been satisfied with the profit allowed them on nationally advertised food products. At the 1923 convention of the American Specialty Manufacturers' Association, O. J. Moore, of the O. J. Moore Grocer Co., of Sioux City, Iowa, "went to the mat" with the specialty men on this subject. Mr. Moore is a vice-president of the National Wholesale Grocers' Association, but he appeared before the specialty convention at Minneapolis last September as a representative wholesale grocer, not representing any association. After an address to the specialty men, outlining the advances in overhead costs of the jobber, and pointing out that the profits allowed the wholesale grocers have not risen in proportion, Mr. Moore submitted to the manufacturers a detailed list, and specified the percentage of profit which he believed the jobbers were entitled to on each item. These percentages were materially over the present trade discounts in many instances. Owing to Federal regulations governing price fixing, the American Specialty Manufacturers' Association was not able to take any action upon Mr. Moore's suggestions, as an organization, but a meeting was subsequently held in Chicago, at which the question was further discussed. Nothing definite has been done in this direction, however.

At the recent convention of the National Wholesale Grocers' Association in Chicago the question of jobbing profit on nationally advertised specialties was informally discussed at great length, and it appeared to be the consensus of opinion among jobbers that it would be more profitable to concentrate on house brands, upon which the jobbers can regulate their own profit.

Informal discussion among the manufacturers at Minneapolis last September indicated that many of them have been seriously considering the question of direct selling of specialties. As several manufacturers pointed out the manufacturers at present make the goods, advertise them, sell them to the retail trade, o. k. the credit of the buyer and guarantee the profit, leaving the jobber only the task of making actual delivery, collecting, and remitting. In cases where drop shipments are made, all the jobber has to do is collect. There was considerable interest in a conversation revolving around this problem in which it was suggested that it would not be entirely beyond the bound of possibility for the manufacturers to club together and establish co-operative warehouses and clerical forces at principal distributing points in the event that an attempt to sell direct be made.

Illinois Association Elects—A. W. Oakford, of Oakford & Fahnestock, of Peoria, was re-elected president of the Illinois Wholesale Grocers' Association at its annual convention. Other officers elected were: R. O. Ahlenius, of J. F. Humphreys Co., Bloomington, first vice-president; Lewis Williams, Webster Grocery Co., Danville, second vice president, and Al Trefager, Chas. J. Off Co., Peoria treasurer. Roy Davidson, of M. O'Connor & Co., of Indianapolis was one of the speakers before the meeting.

Among the important resolutions adopted were the following:

"*Resolved,* That under present day conditions it is absolutely necessary that the wholesale grocer shall know his cost in order to make his selling price on a basis that will enable him to stay in business, and continue to give the service to his trade that they demand.

"*Resolved,* That we as citizens as well as wholesale grocers take an active interest in legislation both State and National, in securing wise legislation and in defeating that which is a menace to and harmful to our nation."

Harry L. Smith Dies—Harry L. Smith, president of the LaFayette Smith Grocer Co., of Springfield, Ill., died May 27th, having suffered a severe cerebral hemorrhage on May 24th. He was a prominent member of the Illinois Wholesale Grocers' Association and beloved by all who knew him in the trade. He had a host of friends in the wholesale grocery business and Masonic circles, where he was always prominent and active, having been honored with the Thirty-third Degree.

Arbitration Bill—Austin L. Baker, chairman of the Arbitration Committee of the National Wholesale Grocers' Association, writes: "The National Wholesale Grocers' Associaton is pleased to report that H. R. 646, the proposed United States Arbitration Act, was passed by the House of Representatives of Congress prior to its adjournment. As members know, the principles involved in this bill are in line with the arbitration policy of the National Wholesale Grocers' Association. The bill proposes that a written provision in a contract involving interstate or foreign commerce, to arbitrate a controversy arising under such cnotract, or an agreement to arbitrate any dispute under such contract, shall be valid and enforceable except on such grounds as exist in law or equity for the revocation of any contract. Congress has adiourned, and unless called in special session, will not reconvene until December next. At that time the bill which now has passed the House of Representatives will be before the Senate for action."

A TRIBUTE TO J. W. HILL

By John A. Lee

The canning industry has lost a great friend in the death of J. W. Hill, recently, for two terms, President of the Western Canners' Association.

He was in Los Angeles, Cal., visiting his son, who lives there, and was seized with heart trouble, and his death ensued Thursday, June 12, 1924. He will be buried at his home, Des Moines, Iowa, Saturday June 21, 1924.

He had been intimately connected with cannnig and the canning industry in Iowa for many years, was once president of the Iowa Traveling Men's Association, and was connected with several successful business enterprises in Des Moines, also a prominent member of the Masonic Order, and a member of the Christian Church.

He was a man of splendid natural and acquired ability and one of the finest presiding officers and most pleasing speakers among all the canners of the United States.

His natural courtesy and genial spirit of fellowship came from his heart and endeared him to everyone who had the privilege to know him.

Mr. Hill was raised in Texas and came to Des Moines many years ago on horseback, and became one of the most valued citizens of that city and of Iowa.

He was a member of the Board of Directors of the Grimes Canning Co., Grimes, Iowa, and the Dexter Farmer Canning Co., of Dexter, Iowa.

CAPT. E. V. WEBSTER, 58, DIES FROM HEART DISEASE.

"Capt. Emory Vaughan Webster, 58, died at his home in Greenway Apartment today from heart disease. Funeral services will be held Thursday at 2 P. M. at the residence of his son, 3036 St. Paul street. The Rev. Louis Randall, of Allnutt Memorial Church, will conduct services.

For a number of years Captain Webster has been connected with the oyster commission business of Baltimore and Canton, being one of the pioneers in this industry. He is survived by his widow, Mrs. Anna Cox Webster, and one son, G. Preston Webster."

The above appeared in the afternoon papers of Baltimore June 17th, and it marks the passing of possibly the most famous man in the oyster business of Baltimore. When that industry flourished here "Captain" Webster was known in all the great reaches of the Chesapeake Bay. He commanded a whole fleet of oyster boats at one time.

With the waning of that great industry he became interested in canning, and was the "Webster" of Webster, Butterfield & Co., well known as canners of this city. Few men of this industry had a wider acquaintance or more friends, and his passing causes sorrow proportionately.

His son, Preston Webster, who has been his active representative in the canning company for years, survives him.

RECEIVER'S SALE

OF VALUABLE FACTORY PLANT AND EQUIPMENT.

On premises lately occupied by the Mount Holly Canning Company, in Mount Holly, New Jersey, the subscriber will expose for sale, at public vendue, on

TUESDAY, JULY 8, 1924, AT 1 O'CLOCK P. M.,

the following:

Brick Factory of about 17,000 square feet of floor space, besides offices and boiler room, with ample land on which located, accessible from two streets and lying along a creek.

Vacant Lot adjoining.

2 125 H. P. Boilers with Stack.
2 100 H. P. Boilers with Stack.
2 800 gal. Vacuum Pans and Chambers.
4 100 gal. Pulp Vats with Copper Coils.
1 2000 gal. Pulp Vat with Copper Coils.
2 Union Vacuum Steam Pumps.
1 50 peeler capacity Peeling Table.
2 6 oz. Can Fillers.
1 36 Hole Filler.
2 Sprague-Lowe Pulpers.
1 Sprague-Lowe Exhaust Box.
1 Tomato Washer.
1 35 H. P. Steam Engine.
1 Union Air Compressor with Tank.
1 Steam Crane for processing.
17 Process Baskets.
4 Process Tubs.
1 Sprague-Lowe Scalder.
1 Sprague-Lowe Washer.
1 Electric Motor and Starting Box.
1 Fairbanks Scales.
3 Double Action Steam Pumps.
1 Extra large Burnam Vacuum Steam Pump.
6 125 lb. pressure Steam Traps.
2 Knapp Labelers.
1 Time Clock and Files.

Also Pulp Finishers, Pulp Containers, Conveyor and Engine, Pulp Pumps, Overhead Track and Frame, Hand Trucks, Belting, Packing, Shafting, Hangers and Pulleys, Gas Stoves, Galvanized Tubs, Buckets, new Empty Cans, Office Furniture and other articles too numerous to mention.

Persons wishing to examine the property and an inventory and schedule of the machinery and other personal property prior to the sale will call upon the subscriber at his office, 115 Main Street, Mount Holly, New Jersey.

Conditions at sale.

RICHARD B. ECKMAN,
Receiver of the Mount Holly Canning Company.

SMILE AWHILE

NATURAL

The inquisitive old lady was bending over the bed of a wounded soldier whose head was swathed with cotton ad linen.

"Were you wounded in he head, my boy?" she asked.

"No'm," replied a faint voice. "I was shot in the foot and the bandage has slipped up."

A QUESTION OF SPEED

Fair Client—How long will it take to get a divorce?

Lawyer—How fast is your husband?—Judge.

THE EYES HAVE IT

Father (sternly)—What do you mean by dancing the hula-hula at that party?

Flapper—Why, daddy, I was just putting a little motion before the house.

OF COURSE

He had been looking over the cards of greeting on the counter for some time, when the saleslady suggested:

"Here's a lovely sentiment: 'To the Only Girl I Ever Loved.'"

"That's fine," he said, brightening. "I'll take five—no, six of these, please."

"REALLY"

She—Just think, we have been married twenty-four hours.

He—Yes, it seems as though it were just yesterday.—Punch Bowl.

UNDER SUSPICION

Several members of a woman's club were chatting with a little daughter of their hostess.

"I suppose you're a great help to your mother," suggested one.

"Oh, yes," replied the youngster, "and so is Ethel, but today it's my turn to count the spoons after the company has gone."

EFFICIENCY PLUS

"That efficiency expert makes it a rule to search five minutes—no more and no less—when he loses a golf ball."

"It's a good rule, too. I played with him once when he lost a ball, and we found three in the five minutes."

"CHEWING THE RAG"

"Do you like bananas?" asked the old lady.

"Madam," replied the slightly deaf old gentleman, "I do not, I prefer the old-fashioned night shirt."—Black and Blue Jay.

A PROUD RECORD

"You here again after only eight months!" snorted the judge. "Didn't I give you a year the last time?"

"Ye did, yer honor," assented the prisoner, puffing out his chest, "but I had lots of time taken off for good behavior."

RECOGNIZED

Pedestrian-in-a-Hurry—Five dollars extra if you'll get me to the railroad station in ten minutes!

Taxi Driver—Yes, sir. I make a specialty of criminal cases."

EXACTING BOSS

"Does your wife know how to wash dishes?"

"I should say she does. I can't do them to suit her at all."

THE MAN PAYS

Ann of the Follies—I have a husband with money galore.

Stella—Why, dearie, you never told me you were married.

Ann—I'm not—he isn't my husband.

WUXTRY!

Boast—I am descended from a long line of strong men.

Roast—Well, several of my ancestors were newsboys in the Stone Age.

EDITORIALS

STANDARDS—In our Smile Awhile column this week Bones asks Silas why he does not paint his cannery, and Silas answers: "Ain't I been lookin' for my paint brush two year?" It has always seemed to us that the canner who waits to standardize his goods is just exactly like Silas.

Heinz did not wait for the formulation of government, state or association standards, nor did any other successful food manufacturer, or the maker of any successful article on the market today, whether it be Mr. Packard or Mr. Ford. And neither does any canner have to wait for "standards." Every man in the business must be the master of his own destiny, and he carves that destiny by the care, or lack of it, with which he packs and markets his goods. That of necessity must make the distinction between the products of two canneries since both are able to procure identical supplies of raw produce. It comes down to the age-old question of cooks: every mother's son of us on earth is a cook unto himself or herself, the differences, or preferences, showing in the resulting dishes, and of course in the variation of tastes. But it is this variation in tastes which gives all canners their opportunity, enlarges their realm and gives additional promise of success.

Standards! Why, there is a repugnance about the word, and certainly about the thought. Suppose all canned foods were thoroughly and completely standardized. What a monotonous, uninteresting spectacle it would make, and what chance would 95% of the canners have to get a price above cost of production? Standardization is the fallacy, if not the crime, of the age. A lot of the narrow-minded, visionless ranters who are trying to lead the people of this country into their manner of thinking (God save the mark!) would like to standardize everything, from babies to bed sheets. But standardization is unnatural, for remember that in all nature not two things are exactly alike, not two leaves on any tree, nor two apples in any barrel, and yet these inexperienced untutored men whose tongues keep miles ahead of their brains, advocate standardization in manufacture or production.

The only place where standards are of value is in the selling market, for the guidance of the buyer or the seller, and then these standards must, of necessity, be pliable or elastic, other conditions entering into the consideration. There are standards in grain buying and selling, but old Dame Nature has not listened to the pleadings of our agricultural professors, who would produce crops of absolutely uniform shape, size and condition. The work of these professors is good and along the right line, because it results in a general lifting up of the whole output, a general improvement, even though it comes far from producing absolute standardization, and we would not wish to be thought in opposition to their efforts. The more efforts they put forth the better the results will be, but we would be in a sad plight if the growers sat down and waited until they had evolved a set standard for any food crop. There are a lot of canners "sitting" still today, so far as any decided effort to improve the quality of their output is concerned.

And that is the point we wish to make: because the world is turning to canned foods as even the most hopeful of us never even dared dream, the canners have been urged to pack quality, to watch every can to see that it is packed so that it will go out as a "want-more" messenger to the consumer who gets it. Most canners are making this effort, but if you ask among them they will, almost to the man, come back with the query, "Why don't they make standards, and then we would know how to go ahead." That is the "sitting still" we refer to, and which should not exist. If you be a man, take the job in hand like a man; set out to make your own standard, and set it as a mark at which others will have to shoot. Set it high and pack them well, and you will find the market come to you, and with it the reward in better prices and better profit. Let the fellow who likes to get in the rut and is content to stay behind the procession pack the adopted, concrete standards, and get the standard prices and profits due to the competition. If you are uncertain as to your goods, go into the market and buy some of the well-known goods, packed by canners who have set their own standards, and then match them or go them one better if possible. But be sure you buy goods which the market recognizes as of high quality and

uniform at all times. With those cans cut in front of you, there is no reason why you cannot set yourself a standard which will put your business upon a solid basis of every-year orders taing your capacity.

The standards as adopted will help the buyers—and there are thousands of them who sadly need this help, for they have but one gauge now and that is price. And they may help the brokers, who sadly need this enlightenment, though their eternal quest for a commission will hinder and hold back their education more than it will that of the buyers.

But if the canners this season will make this effort at personal quality packs, they will reap a reward beyond their fondest expectations, because in the cleaned-up condition of all stocks the new goods will go direct to the consumers, and if the consumers find these goods to their liking they will come back with greater demands than ever before. In this way the canners may not make an added profit on the futures already sold, but they will lay the foundation for other years' business that will be certain and very rofitable. And most canners are not in business for a year.

JOTTINGS—"And it (the contest of cities for the next Canners' Convention) narrowed down to a choice between Cincinnati and Atlatic City, and they chose Cincinnati," and the writer ends up: "Well, there is no accounting for tastes, as the old woman said when she kissed the cow."

* * *

After returning from the Buffalo Convention, we did as we were so urgently and numerously requested to do—urged the selection of Atlantic City as the next and the permanent convention city. In response to this we received many "hot" rejoinders, and some ridicule, and we were told by officers in high places that Atlantic City was entirely and completely out of the question, and that the industry would not listen to it. In view of our urgings, we were surprised, but of course we meekly submitted, because for us it is a matter of popular demand.

Cincinnati will give the Convention a good time, treat it well, and we predict a convention of great success. We expect to see it a record-breaker.

* * *

Something to think about—from a prominent daily:

> "At many a festive board, from Maine to Florida, they sang 'God Save the King,' for many years. We were all law-abiding subjects of Great Britain. We did not all grow tired of it at once. It started with a handful of revolutionists who decided to disregard the laws under which we were living."

* * *

Men make laws, or at least they are supposed to, with the intent of correcting abuses or bettering conditions. With those needs in mind, they try to put the laws into such words as will bring about that particular correction. Therefore, always the intent or spirit of the law should be in view, because human limitations and the peculiarities of our language do not always permit a precise statement which may not be interpreted for other than its original intention. Then our courts interpret the "letter of the law" and confusion and discontent naturally result. Of course, designing politicians deliberately construct some of our laws so that "you could drive a two-horse team through them, but we mean to speak of laws drawn in the best intention, worded with the utmost care, and then twisted out of all semblance of original intention through the interpretation of "words." That is the "style" of the day, and it is most unfortunate that it is so.

Cannery For Sale

By reason of the death of Geo. N. Numsen the undersigned, representing the interests of the firm of Numsen & Davis, have decided to offer at private sale the firm's cannery, located at Benedict, Charles Co., Md. This factory, located on the Patuxent River is completely equipped and has an abundance of tomatoes, peaches and blackberries available. Three hours ride by auto. from Baltimore. Ideal location, numerous summer resort hotels, and extensive automobile travel from Washington and other sections. On State Road.

Standards For Canned Vegetables

Adopted by Association of New York State Canners, Incoporated

Vegetables

Canned Vegetables are the sound product of properly matured and prepared fresh vegetables, with or without the addition of potable water, salt and sugar, as specified in the separate definition for the several kinds of canned vegetables, sterilized by heat, with or without previous cooking, in equipment from which they take up no injurious substance, and kept in suitable clean, hermetically sealed containers, and conform in name to the particular vegetable used in their preparation.

Peas

Canned Peas are the canned vegetables prepared from the fresh but immature seeds of the common or garden pea (pisum sativum) by shelling, winnowing and thorough washing, with or without grading and with or without pre-cooking (blanching) and by the addition, before sterilization, of the necessary amount of potable water with or without sugar and salt.

Varieties of Peas Used for Canning—Early variety peas are peas which are from seed of early maturing sorts having a smooth skin. Sugar peas, or sweet peas, are peas which are from seed of later maturing sorts having a wrinkled skin and sweet flavor.

Canned Peas Qualities: Fancy Quality Canned Peas are prepared from fresh, young tender peas of practically uniform color and size, unless declared to be ungraded for size. They have a practically clear liquor, and are free from flavor defects and practically free from skins and split peas.

Choice Quality Canned Peas are prepared from fresh peas, which may be less tender than those used for the "Fancy Quality," of reasonably uniform color and size, unless declared to be ungraded for size. They have a reasonably clear liquor, though not necessarily free from sediment and are reasonably free from flavor defects, skins, splits or discolored peas.

Standard Quality Canned Peas are prepared from fresh though possibly more nearly matured peas. They may lack some uniformity in color and size, may have a roily liquor and may have some skins, splits or discolored peas.

Off-Quality Canned Peas are prepared from fresh peas that lack in other respects the qualifications of the higher qualities.

Canned Pea Sizes

No. 1 Peas are peas which were, before pre-cooking (blanching) small enough to pass through a screen of 9/32 inches (7mm.) mesh.

No.2 Peas are peas which were before pre-cooking (blanching), small enough to pass through a screen 10/32 inches (8mm.) mesh, but too large to pass through a 9/32 inch mesh.

No. 3 Peas are peas which were, before pre-cooking (blanching) small enough to pass through a screen 11/32 inch (8.7), but too large to pass through a 10/32 inch mesh.

No. 4 Peas are peas which were, before pre-cooking (blanching), small enough to pass through a screen 11/32 inch mesh.

No. 5 Peas are peas which were before pre-cooking (blanching) small enough to pass through a screen 13/32 inch, (10.3mm.) mesh, but too large to pass through a 12/32 inch mesh.

No. 6 Peas are peas which were, before pre-cooking (blanching) too large to pass through a screen of 13/32 inch (10.3mm.) mesh.

There shall be a reasonable tolerance for the number of smaller peas present in any specified sizz.

Ungraded Peas—Ungraded, unsifted, run o' pod, or telephone style are peas not graded for size, before pre-cooking (blanching) provided that where any size have been removed, the designation ungraded for size, may be used only if qualified with a statement of the size or sizes so removed.

Corn

Canned Corn is the canned vegetable prepared from kernels of fresh sweet corn. The corn is huskd, trimmed or sorted, thoroughly washed, cut from the cob, and silks, pieces of cob and husk removed. It is packed with potable water, with or without the addition of sugar or salt.

Styles

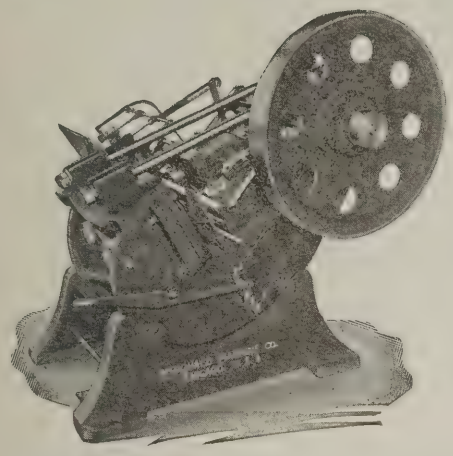
Cream Style is the product prepared from sweet corn removed from the cob by shallow cutting through the grain and subsequent scraping. It has a more or less creamy consistency.

Whole Grain Style is the product prepared from sweet corn and from the cob in such a manner as to leave the grain substantially entire.

Qualities

Fancy Quality is pasked from selected stock of young, tender sweet corn while fresh, and has the distinctive flavor of young corn. It is free from specks and discolored kernels and is practically free from pieces of cob, silk and husk. It has a bright color, and, unless packed whole grain style, has a creamy consistency.

Choice Quality is packed from reasonably young and tender sweet corn while fresh, and has the flavor of young corn. It is reasonably free from specks, discolored kernels and pieces of cob, silk and husk. It has a reasonably bright color.



Standard Quality is packed from fresh sweet corn, and has less attractive flavor, color or appearance than the higher grades. It is free from any considerable amount of cob, silk husk and discolored kernels.

String Beans

Canned String Beans are the canned vegetable prepared from fresh, immature pods of certain varieties of string beans, the pods to be picked from growing vines, snipped with the removal so far as possible of strings, and the whole or cut pods pre-cooked (blanched) and washed, with the addition before sterilization of the necessary amount of potable water, with or without salt.

Fancy Quality Canned String Beans are prepared from young, tender pods, packed while still fresh, of practically uniform color and size, unless declared ungraded for size, with clear liquor, are practically free

No. 32 Automatic Strip Feed Press

Although similar to our other Automatic Strip Feed Presses, this particular size is especially adapted to the rapid production of deep drawn metal articles.

Of extra heavy design with chrome nickel crankshaft and solid steel flywheel, the Press is well suited for single or double die operations requiring excessive strain. Large diameter shaft bearings allow ample rigidity and extra long slides maintain a perfect alignment of dies.

The Press is provided with compound change gears for variable cuts and simple adjustments for different lengths of material.

The automatic feeding insures a high uniform output and eliminates the dangerous hand operation.

The Press is equipped with automatic release which immediately stops feeding mechanism when subject to undue strain.

Additional particulars on this press or any other automatic can producing equipment gladly furnished upon request

from tough stings, and are free from rust, stems and flavor defects.

Choice Quality Canned String Beans are prepared from young, tender pods, packed while still fresh, of reasonable uniform color and size, unless declared ungraded for size, with clear liquor, are reasonably free from tough strings and are practically free from rust, stems and flavor defects.

Standard Quality Canned String Beans are prepared from pods packed while still fresh, and with a fairly clear liquor. They may show less uniformity in color and size or more strings than the higher qualities, but shall be reasonably free from rust, stems or flavor defects.

Off-Quality Canned String Beans are prepared from pods while still fresh, but may lack in other respects the qualifications of the higher qualities.

Grades With Respect to Size—When string beans are graded as to size they shall before blanching pass through sieves of the following dimensions and shall be known by the grade number indicated:

No. 1	12/64 in.
No. 2	14/64 in.
No. 3	17/64 in.
No. 4	20/64 in.
No. 5	Over 20/64 in.

Note—The above standards apply equally to Wax Beans, the word "Wax" being substituted for "String" in all cases.

Tomatoes

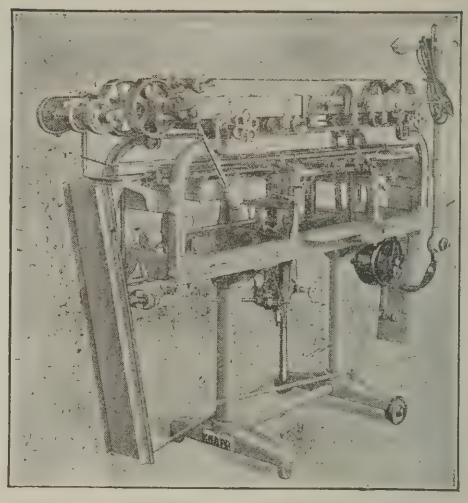
Canned Tomatoes are the canned vegetable prepared from sound, ripe, fresh tomatoes of any red variety by thorough washing and scalding, and by proper peeling, coring and trimming, with or without the addition of sugar and salt, and sterilized by heat. The liquor used for filling the spaces between the fruits is juice derived from tomatoes after being prepared as above, and does not exceed that originally present in the prepared fruit.

Fancy Quality Canned Tomatoes are prepared from select tomatoes, uniformily red in color, practically free from pieces of skin, cores and blemishes and whole or almost whole.

Choice Quality Canned Tomatoes are prepared from tomatoes practically free from under-colored parts, from pieces of skin, cores and blemishes, and are for the most part whole or in large pieces.

Standard Quality Canned Tomatoes are prepared from tomatoes reasonably free from under-colored parts. The tomatoes may be broken, but are reasonably free from pieces of skin, cores and blemishes.

Spinach



Canned Spinach is the canned vegetable prepared from the fresh, clean leaves of spinachia cleracea by thorough washing, sorting and blanching (pre-cooking), and by the addition, before sterilization, of the necessary amount of potable water, with or without salt.

Fancy Quality Canned Spinach is prepared from fresh, young and tender leaves. It is practically free from grit, discolored leaves and fibrous stems and reasonably free from seed heads.

Standard Quality Canned Spinach is prepared from fresh leaves, but in other respects lacks some of the qualifications of the "Fancy" quality.

Beets

Canned Beets are the canned vegetable prepared from some sound, deep-red garden variety of Beta vul-

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

SPENDING WISELY

Spending money wisely has as much to do with success as any other factor in business.

Wise spending is investing your money not with the thought of first costs only, but rather of ultimate results.

The thousands of canners who are investing in the "cleaning service" which always follows the use of

Wyandotte Sanitary Cleaner and Cleanser

are getting these ultimate results in dependable sanitation and practical insurance against preventable losses from swells and spoilages.

These factors show up in the profits of the year and carry the conviction that your order to your supply house for this cleaner is an investment well worth repeating.

It cleans clean.

Indian in circle

in every package

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan

garis, by topping, washing, blanching, peeling, and by the addition before sterilization of the necessary amount of potable water, with or without the addition of sugar and salt.

Fancy Quality Canned Beets are prepared from young, tender, deep-red beets of uniform color. They must be well-peeled and trimmed and free from flavor defects. When packed whole and graded for size they must be practically uniform in size and shape. When sliced the slices must be practically uniform in thickness.

Choice or Standard Canned Beets are those which lack in some respects the qualifications of the "Fancy" quality.

Note—Beets are usually packed in only two qualities and there is no well-established custom as to naming the second quality.

Pumpkin

Canned Pumpkin is the canned vegetable prepared from various varieties of the common field or pie pumpkin, Cucurbita Pepo, by thorough washing, stemming, steaming and reducing to a pulp, and sterilized by heat.

Fancy Quality Canned Pumpkin is prepared from fresh, fully-matured bright golden pumpkin. It is a smooth, heavy, thoroughly screened pulp practically free from particles of skin or seeds and sufficiently dry so that when cold it will not more than pour out of an open inverted can.

Choice or Standard Quality Canned Pumpkin is prepared from fresh pumpkin, but lacks in some respects the qualifications of the "Fancy" quality.

Note—Pumpkin is usually packed in only two qualities and there is no well-established custom as to naming the second quality.

Squash

Canned Squash is the canned vegetable prepared from fresh, fully matured squash of the species, Cucurbita Maxima, of which the most common varieties are Boston, Marrow, Golden Hubbard and King of the Mammoth, by thoroughly washing, stemming, steaming and pulping, or by peeling and cutting into pieces.

Fancy Quality Canned Squash is prepared from fresh, fully-matured squash. It shall be a smooth, heavy thoroughly screened pulp (unless cut into pieces) practically free from any particles of skin or seeds, and sufficiently dry that when cold it will not readily run or pour out of the open inverted can.

Choice or Standard Quality Canned Squash is prepared from fresh squash, but lacks in some respects the qualifications of the "Fancy" quality.

Note—Squash is usually packed in only two qualities and there is no well established custom as to naming the second quality.

Succotash

Canned Succotash is the canned vegetable prepared from kernels of fresh sweet corn mixed with either fresh or dry lima beans. The corn is husked, trimmed or sorted, thoroughly washed, cut from the cob, and silks, pieces of cob and husk removed. The beans, if green, are threshed, washed, hand-picked and blanched; if dry, they are hand-picked and blanched. The corn and beans are mixed and potable water with or without sugar and salt, added before sterilization.

Canned Succotash Qualities—The same requirements hold as for "Fancy," "Choice" and "Standard" corn, respectively.

LABELING ON APPLE CIDER VINEGAR

BULLETIN No. 293, dated July 7, 1923, reported that the United States Circuit Court of Appeals for the Sixth District had reversed a decision of the District Court for the Northern District of Ohio, Eastern Division, in the case of the United States vs. 95 Barrels of Alleged Apple Cider Vinegar, the Court of Appeals holding that vinegar made from dried or evaporated apples was not misbranded if labeled "Apple Cider Vinegar made from Selected Apples."

The case was appealed to the Supreme Court of the United States by the Department of Agriculture, and the decision of the highest court, rendered June 2, has just come to hand. The case is No. 559, October Term, 1923, United States of America, Petitioner, vs. 95 Barrels (more or less) Alleged Apple Cider Vinegar, on Writ of Certiorari to the United States Circuit Court of Appeals, Sixth Circuit.

The Supreme Court reverses the decision of the lower court, and holds that vinegar made by a process of drying or evaporating apples, then adding pure water to replace the 80 per cent moisture removed by the drying or evaporating process, extracting this juice and permitting it to become vinegar through fermentation, is misbranded if labeled "Apple Cider Vinegar." The opinion of the Court, delivered by Mr. Justice Butler, is an interesting document, reviewing the case as presented to the lower court, the admissions of the claimant of the 95 barrels, giving a rather detailed description of the method of making vinegar from dried and evaporated apples, and concluding with the following:

"If an article is not the identical thing that the brand indicates it to be, it is misbranded. The vinegar in question was not the identical thing that the statement 'Excelsior Brand Apple Cider Vinegar made from Selected Apples' indicated it to be. * * * The words 'Excelsior Brand,' calculated to give the impression of superiority, may be put to one side as not liable to mislead. But the words 'apple cider vinegar made from selected apples' are misleading. Apple cider vinegar is made from apple cider. Cider is the expressed juice of apples and is so popularly and generally known. * * * It was stipulated that the juice of unevaporated apples when subjected to alcoholic and subsequent acetous fermentation is entitled to the name 'apple cider vinegar.' The vinegar in question was not the same as if made from apples without dehydration. The name 'apple cider vinegar' included in the brand did not represent the article to be what it really was, and, in effect, did represent it to be what it was not—vinegar made from fresh or unevaporated apples. The words 'made from selected apples' indicate that the apples used were chosen with special regard to their fitness for the purpose of making apple cider vinegar. They give no hint that the vinegar was made from dried apples, or that the larger part of the moisture content of the apples was eliminated and water substituted therefor. As used on the label, they aid the misrepresentation made by the words 'apple cider vinegar.'

"The misrepresentation was in respect of the vinegar itself, and did not relate to the method of production merely. When considered independently of the product, the method of manufacture is not material. The act requires no disclosure concerning it. And it makes no difference whether vinegar made from dried apples is or is not inferior to apple cider vinegar.

"The label was misleading as to the vinegar, its

HOW AUSTRALIA HELPS ITS CANNERS

The Bounty Scheme

A BOUNTY will be paid at the undermentioned rates to the manufacturer on production of the canned fruits specified hereunder.

2. A Bounty will also be paid to canners on all fruits of the kinds specified hereunder, which are exported from the Commonwealth with the approval of the Customs Department.

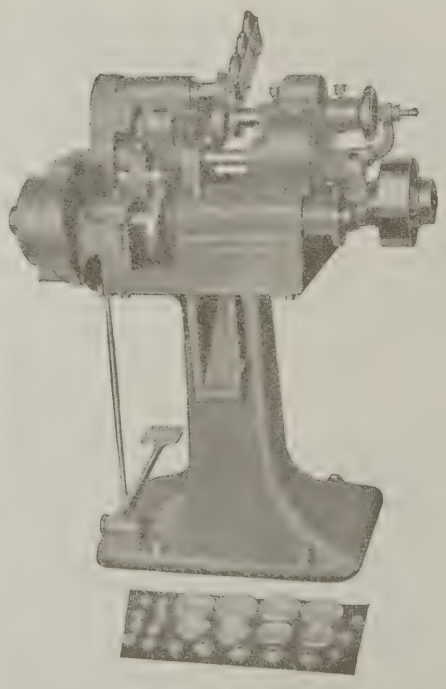
	Rate of Bounty on Production	Rate of Additional Bounty on Export
	Per Doz. 30-oz. Tins	Per Doz. 30-oz. Tins
Apricots	9d.	1/89.
Peaches (Cling)	1/–	1/9d.
Peaches (Free)	10d.	.....
Pears	9d.	1/6d.
Pineapples	6d.	1/–

Conditions Under Which Bounty Will Be Paid to the Canner

3. That he purchases the fresh fruit suitable for canning at prices that will net grower not less than the following at railway station or local (i. e., country) factory:

Apricots and pears	$10 per ton
Clingstone peaches	9 per ton
Freestone peaches	7 per ton
Pineapples	6 per ton

4. That the canner purchases fruit suitable for canning in quantities equivalent to those which his factory is capable of handling. Before the season commences each canner will be required to undertake to can such varieties and quantities of fruit as the Comptroller General of Customs may prescribe, having regard to the capacity of the factory.



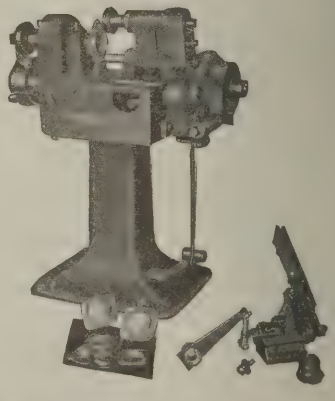
5. That the canner furnishes proof to the satisfaction of the Minister for Customs that the fruits in respect of which bounty is claimed are of good and merchantable quality, such proof to be determined at time fruit is being processed.

6. That all account books and documents relating to fruits on which bounty is claimed shall be subject to examination and audit by an auditor appointed or authorized by the minister.

7. That the minimum price to be charged for canned fruit during the first six months of the new season, commencing on January 1st next, be on the basis of the present prices to wholesalers and retailers in Victoria, viz.:

	Wholesaler per 30 oz. tins	Retailer per 30 oz tins
Clingstone peaches	8/ doz.	8/6d doz.
Apricots	9/6 doz.	10/3d doz.
Pears	10/6d doz.	11/6d doz.

Less 3½ per cent for cash or its parity in other states. At the end of six months canners are to mutually agree on the minimum prices to be charged for a future period. Should canners be unable to agree, they are to submit the matter to an arbitrator. If canners can-



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

not mutually agree as to who is to act as arbitrator, the Minister for Customs will appoint some person with definite knowledge of the trade to act in this capacity.

8. In respect of fruits exported, bounty is payable only on fruits packed and graded in accordance with the commerce regulations and approved of for export by a commonwealth com. inspector. Each canner shall have the right to export up to 30 per cent of each class of fruit packed by him, but any canner who desires to export more than 30 per cent of any one kind of fruit must first obtain the consent of the Minister for Customs.

9. On slipstone peaches bounty is limited to 100,000 dozen of canned fruit, which is equivalent to about 2,500 tons of fresh fruit. Each canner will be allowed for bounty purposes a pro rata quantity of slipstone peaches based on the quantity packed by him last year.

10. The bounties referred to will only be paid in respect of fruits grown and canned in the commonwealth during the 1923-24 season.

11. The rates of bounty apply to 30 oz. fruits packed in syrup, also to apricots and clingstone peaches panked as pie fruit. Proportionate rates will be allowed on sizes greater or less than 30 oz.

A QUESTION AND THE ANSWER

June 21, 1924.

The Canning Trade,
Baltimore, Md.

As a subscriber to your paper I would like to know if you would take the trouble to tell me if there are any organizations which adjust accounts for small packers. I do not like to do business and have to adjust my account entirely in accordance with the broker or buyer; still, after either of them get your goods and if they wish to take an arbitrary position in the matter, and, say, charge you or rather overcharge you $100 to $200 on some item, like storage or anything, a packer in my position is helpless, and might just as well kiss it good-by as to attempt to adjust the matter. Transportation, in my case, if the broker happened to be in Baltimore, would absorb the entire charge. I would like you to consider the inquiry confidential and give me a reply if you will. Thanking you in advance, I am,

Yours very truly,

(This letter is on file.—The Editor.)

In answer we wrote, June 24th:

Your favor of the 21st is at hand. In reply beg to say that

The Wheeler Service Bureau,
280 Broadway,
New York City,

was instituted to furnish the canners relief of the kind you seek. They made a charge of $25.00 per year, and we believe you will find that when you carry on your billheads or stationery the statement that you are a member of Wheeler Service Bureau, practices of the

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

Chicago, Illinois.

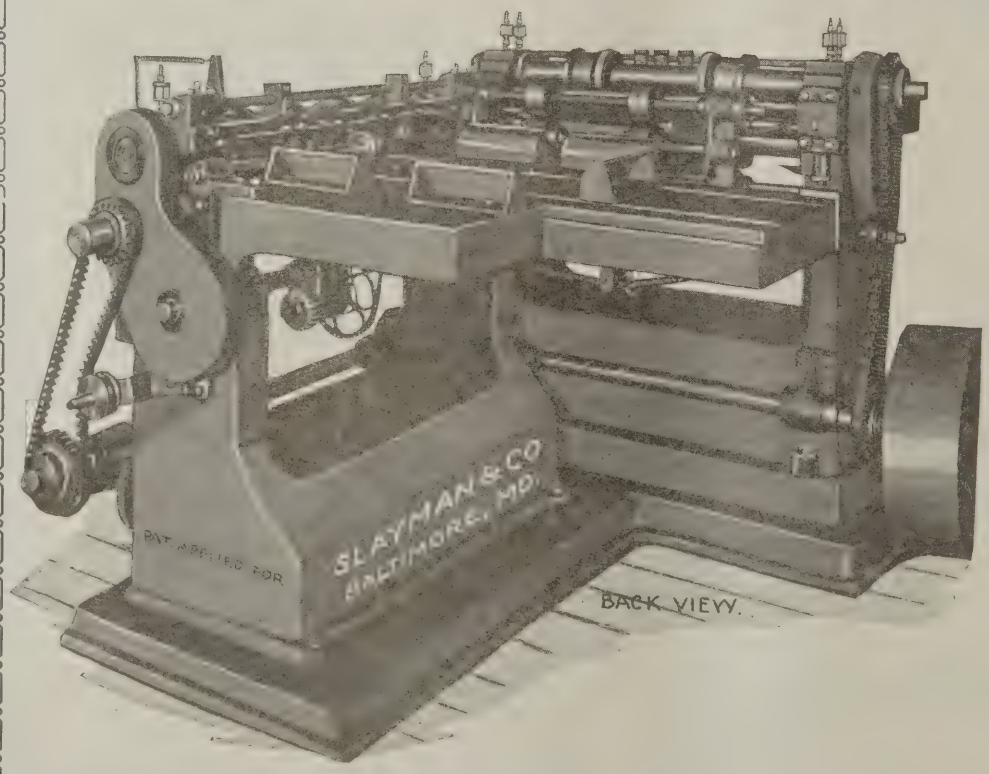
kind you state will not be attempted. There is a great deal of this kind of unfair dealing being done, but those sort of dealers will not dare face the Wheeler Service investigation.

The charge of $25.00 covers cost of such cases, and we would suggest that if you are being troubled, write to them and employ this service. It will be worth more than $25.00 to feel easy in your mind and free of such annoyances. Hundreds of canners are using this Bureau, and they all speak in the highest terms of them.

Trusting this will answer your purpose, we beg to remain,

Very truly yours,
THE CANNING TRADE.

THE CROPS AND CANNING IN BRITISH COLUMBIA



Extracts from Consular Report No. 134467b, on "Agriculture—British Columbia," by Consular Clerk Luther K. Alther, Vancouver, B. C., May 8, 1924.

THOUGH the season is backward, conditions generally for farming in British Columbia have opened auspiciously. It is too early to predict the outcome, but there is every indication of a large strawberry crop, while in the interior of the province, in the main fruit districts, late frosts have greatly reduced the prospects for soft fruits, it being estimated that from 50 to 75 per cent of the cherry crop has been destroyed.

The development of the berry industry greatly increased during the last few years, and recently this $20,000,000 industry has been jeopardized by the poor prices realized owing to a limited market and shortness of season, but the provincial government has just come to the rescue by the advancement of $100,000 to the growers' association for the packing and marketing of the surplus, which is expected to reach between five hundred and a thousand tons this season. It is stipulated that the loan must be applied solely to the expenses of preserving and marketing, the government to be secured by the season's entire output, but the Berry Growers' Association, Limited, 525 Seymour St., Vancouver, B. C., which has charge of the entire management of affairs, will establish canneries in central locations not as yet selected, much of the material for this purpose having already been purchased.

Several years ago the British Columbia Tomato Growers' Association, Kelowna, B. C., had difficulty in obtaining satisfactory prices from the local canners for tomatoes for canning purposes, but the matter was finally adjusted by arbitration. This season, however, the canners threaten to close the cannery, and the growers are angry, charging that the company is not living up to the spirit of its agreement, and they are therefore taking preliminary steps to build a cannery of their own which they desire to have ready to receive the forthcoming crop, as plants have been raised and plans made for the growing of a fairly large crop. The local business men have manifested considerable interest in the situation, the payroll for canning alone in that city having been $200,000 annually, while large

SLAYSMAN DUPLEX TRIMMER—SLITTER

Trims the sheet absolutely true, and drops it onto the feed bed of the Slitter where it is cut into the desired sizes—2's 3's 10's etc.

THE TWO OPERATIONS —TRIMMING and SLITTING—IN ONE.

sums were paid to the growers for fruits and vegetables, and they are expected to proffer assistance both moral and financial.

The Cowichan Co-operative Fruit Growers' Association, with the aid of H. F. Prevost, president of the Board of Trade, Duncan, B. C., has taken steps to organize a joint stock company with a capital of $15,000 to build and operate a fruit cannery in that city. Much of the necessary capital has already been pledged, and it is expected that the remainder will be readily forthcoming, but it has not been decided whether the cannery will be built this season or next.

Experiments begun in 1901 have demonstrated that British Columbia is well adapted to the culture of certain varieties of nuts, particularly almonds and Japanese walnuts and, in view of the fact that Canada's importation of this commodity is very large, the extension and development of the industry is being strongly and systematically urged.

OYSTER ARTIFICIAL PROPAGATION EXPERIMENTS

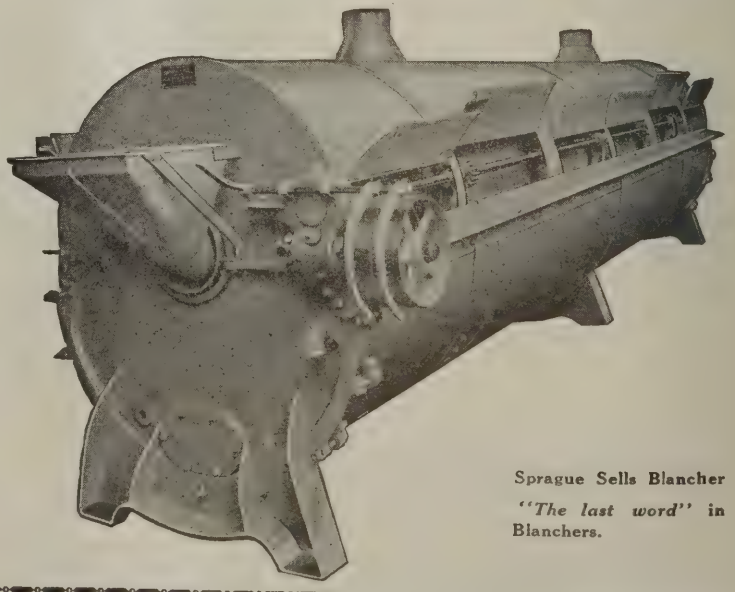
THE great oyster fisheries of the Atlantic Coast have in the past few years experienced an alarming decline in productiveness. Even Chesapake Bay, the greatest oyster-producing body of water in the world, has experienced such a constant depletion from year to year that the industry is threatened. The extensive methods of oyster farming practiced by many of the oyster growers have assisted greatly in maintaining a constant supply but have not been sufficiently reliable to guarantee a crop from year to year. The rapid decline of this valuable industry has been brought about by a constant depletion of the oyster beds from various factors, such as pollution, over-fishing, unfavorable climatic and hydrographic conditions, natural enemies and use of shells for various commercial purposes.

In view of these existing conditions the Bureau of Fisheries for the past few years has been making careful studies of the oyster and oyster larvae in regard to life history, embryonic development, habits, food and environmental conditions, in order that the methods of oyster faming now pacticed might be made as efficient as possible.

In addition to this program, experiments with a new method of artificially propagating the oyster were conducted by the Bureau during the summer of 1923 at the plant of the Connecticut Oyster Farms at Milford, Conn. The object of this work was, first, to determine by a series of experiments the important environmental conditions required by the oyster larvae for normal growth and development; second, to raise a small number of larvae under controlled conditions during the free swimming period until they "set"; and, third, to perfect the method so that oysters could be raised from the egg in sufficiently large numbers to make the process one of commercial value.

"We have had some seasons when we did not finish our planting in May, but the delayed planting was always the late varieties; but in the present instance there are still some of the Alaska peas to be planted, and unless the growing and canning season is cool and backward, there is bound to be much bunching and consequent congestion in Wisconsin this year."

Clipped From May 24th issue of Canner.



Peas are bunched and come with a rush, how many will you lose?

There's still time to get another Blancher to you, or another *complete* line of pea machinery, to enable you to get your *whole* crop into the cans even if it comes in bunches.

If *your* crop is bunched the probable *loss* through being unprepared *will more than equal the entire cost of the new line.*

Cuts more cases per ton than any other cutter.

Sprague-Sells Corn Cutter
(Model 5)

Sprague-Sells Model 5 Corn Cutter cuts more cases per ton because—

1st Ears are accurately centered by double spur and feed rolls.

2nd Feed rolls, knives and scrapers are controlled by equalizing levers, thus uniform cutting is assured.

3rd Uniform cutting means same depth on top, sides and bottom, and results not only in increased production per ton, but better appearance and quality.

4th Sufficient scrapers spaced and set so as to scrape every portion of the ear absolutely clean, means no corn left on cobs to go to the hogs.

5th Small ears and broken ears can be handled on the Model 5 just as well as large ones. The small corn is usually the best, and surely you do not want to waste it.

Order a Sprague-Sells Cutter Today, and be ready to pack quality corn.

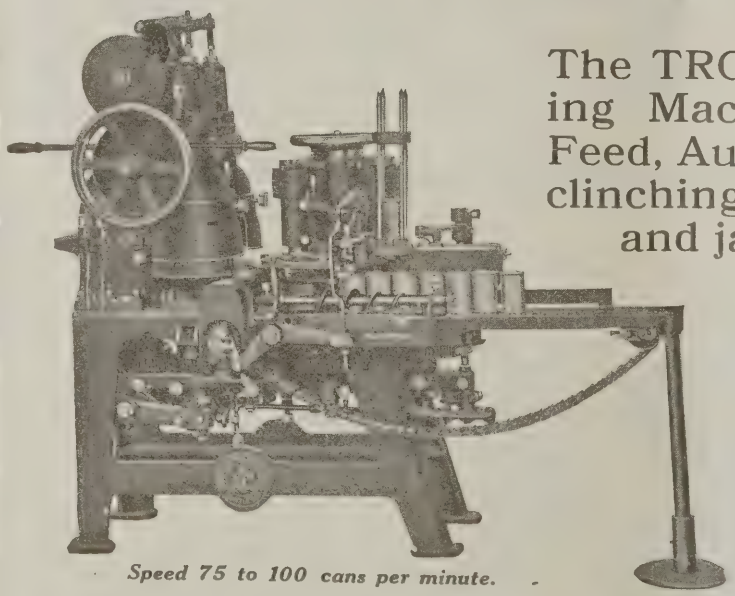
SPRAGUE-SELLS CORN CUTTER

This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

The new method proved successful in an experimental way from the start, and two batches of oysters were raised from the egg under artificial conditions. The success of this process was attributed to as close an imitation as possible of natural conditions. In the first place, millions of oyster eggs were obtained by allowing the adult oysters to spawn naturally under favorable conditions and not by cutting them open and stripping the apparently ripe eggs and milt from them, as has been the practice in most other experiments of this nature. As soon as the eggs developed into tiny swimming oyster larvae they were reared in tanks of running water for 15 to 20 days until they "set." The greatest problem of artificial propagation has been that of retaining the minute larval oysters when supplying them with running water, as they are so small during the first few days that they will pass through felt or the finest bolting silk. For this purpose a new material known as "Filtros" was tested out under various conditions and proved entirely satisfactory. The method which was put into operation by the Bureau of Fisheries has proved successful in this initial try-out on a small scale, but there is still much to be accomplished before it can be considered of practical value in commercial oyster culture.

In order to lay before practical oyster growers and biologists the vaious problems that have made artificial propagation a difficult task, a report on "Eperiments in the Artificial Propagation of Oysters" by Herbert F. Prytherch has just been published by the Bureau and describes the methods used in these experiments. This work will be continued at Milford during the present summer for the purpose of developing the method on a production basis so as to be of some value to the practical oyster industry. The publication referred to is Bureau of Fisheries Document, No. 961, obtainable upon request or purchasable from Superintendent of Documents, Government Printing Office, Washington, D. C., for five cents.

THE END OF THE "COLD PACK" ERROR



THE U. S. Department of Agriculture has just issued a press notice of more than ordinary importance. The troubles which resulted from the mistaken advices regarding the "cold pack" method will be long in disappearing, but it is gratifying to note that steps are being taken to substitute proper directions. The notice referred to is headed:

New Canning Time Tables Isssued by the Department

Studies made in recent years in connection with the canning of certain fruits and vegetables have shown that it takes a much longer time than was formerly supposed for heat to penetrate a jar or a can, and for the material at the center to reach the temperature of the canner.

"Hot pack" canning is therefore recommended by the Bureau of Home Economics of the United States Department of Agriculture in order to decrease the time for heating the entire contents of the jar or the can to the temperature of the canner. This means a short precooking of the fruits and vegetables to be used, after which the material is filled into the jars as hot as possible. This precooking also shrinks the products, and no food value is lost if the hot liquor that has cooked out is used, instead of hot water, to fill the jars.

The Nested Sample Grader—

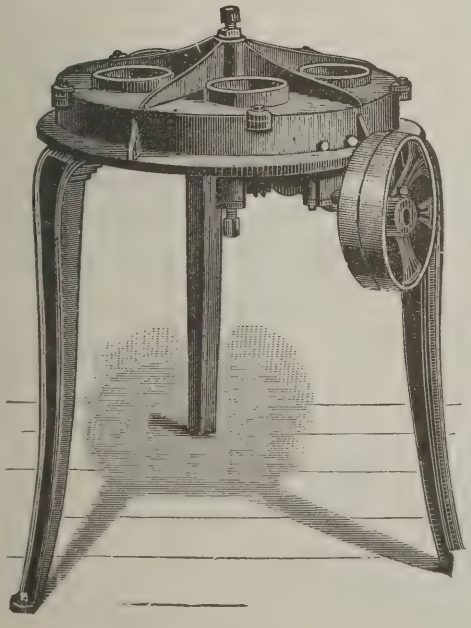
Feeling the need of a "Sampling" Grader that was at once accurate, sturdy, of sufficient capacity, and compact, we developed the Nested Sampling Grader.

It has a frame of angle and channel iron which makes it as sturdy as possible to be built. Its hopper will hold over 30 lbs. of peas, making it possible for one man to grade, weigh and keep the records; for after putting the 25 lbs. of sample peas into the feed hopper, he can forget them until he weighs the various sizes.

It has four sieves, making 5 sizes. These sieves are fastened onto the same cast iron spider. This spider has teeth cut on the periphery, which along with cut mitre gears and chain, make a positive drive.

Its feeder is new and novel, having a rotory with buckets about its circumference. These pockets pick up the peas from the hopper and deliver them to the inner sieve. Thus, no matter whether the beginning or the end of the run, the feed is uniform.

For the canner who wants individual motor drive we can attach ½ H. P. Motor.



Manufactured and Sold by

Sinclair-Scott Company

Makers of Nested Pea Graderr, Colossus Pea Graders, and Other Canning Machinery.

Stevenson's Pineapple Slicer.

A machine for the slicing of Pineapples from 3-16 to ¾ of an inch in thickness, and cuts each and every slice even and of the same thickness. It is easily adjusted and is made substantial and durable. It is made either for hand or power. The legs are sufficiently splayed to admit of placing a tub under the machine.

Stevenson & Company, Inc.

601 S. Caroline St

Baltimore, Md.

New time tables, based on the most reliable facts the department has been able to obtain at present, have been issued as Miscellaneous Circular 24, "Time Tables for Home Canning of Fruits and Vegetables." Those who are contemplating home canning this season should send for a copy of this circular. In the general directions accompanying the time tables it is recommended that the pressure canner be used for all vegetables except tomatoes. The water-bath canner—and by this is meant any covered vessel of sufficient depth for the jars or cans to be completely immersed while processing, and equipped with a rack or false bottom—may be used for fruits and tomatoes.

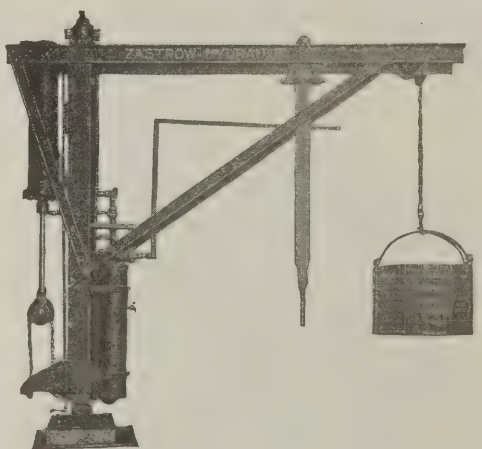
It is possible to pack directly into the jars or cans such fruits as apples, peaches, apricots, cherries, gooseberries, and plums and also tomatoes. Even in the case the jars or can should be filled up with hot syrup or juice. The processing period for these materials packed is 20 minutes, whereas it is only 5 minutes when they are packed hot.

The time periods given in the new tables are based on the use of quart glass jars. The housekeeper is also told how to adapt the processing time to pint glass jars and tin cans. The method of treatment before processing is stated in every case. When the material may be packed either hot or cold, both processing periods are given.

THE PFAUDER COMPANY PURCHASES ELYRIA ENAMELED PRODUCTS COMPANY

THE Pfaudler Co., Rochester, N. Y., announces that it has purchased all of the assets of the Elyria Enameled Products Co., of Elyria, Ohio. The purchase was consummated June 3, 1924.

It is the intention of the Pfaudler Co. to continue operation in the Elyria factory and to continue the production of Elyria equipment. All of the staff of the Elyria Enameled Products Co. have been retained and with bigger production made possible through the operation of both factories, even better and more complete service than heretofore will be given.



The Paudler Co. is rapidly completing plans to place on the market a new line of glass lined piping for the canning and food industries. Other developments, such as a combination of the fine points of the Elyria tank car with those of the Pfaudler tank car are being gone over, so as to give the trade a super-tank car for haulage of liquid food products, milk, etc.

It also announced that the Pfaudler Co.'s European factory, located at Schwetzingen, Baden, Germany, is now operating at full capacity and is in a position to give direct service to any of its clients having European interests. They will be served from this factory, thus eliminating ocean freights.

Mr. Harry S. Calvert, for so many years president and general manager of the Elyria Enameled Products Co., has been elected to the Boad of Directors of the Pfaudler Co., and has been made vice president in charge of the Elyria enameled products division.

The officers of the Pfaudler Co., are now as follows: E. G. Miner, president; W. D. Pheteplace, vice president and general manager; H. S. Calvert, vice president in charge of Elyria enameled products division; R. Ranlet, treasurer; C. J. Stothers, secretary; R. B. Kilmer, general sales manager.

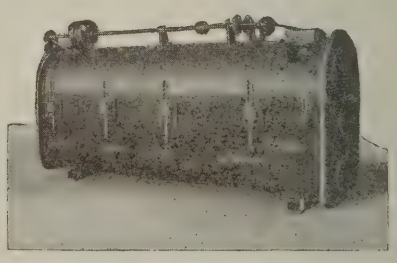
ATLANTIC CANS

PLAIN - LACQUERED - LITHOGRAPHED

Packers
Syrup Refiners
Milk Canners
Lard and Compounds
Peanuts and Peanut Products
Powdered Milk
Fresh Oysters
Paints
Jobbers' Friction and Wax Top Trade

No finer cans beneath the sun,
Quality first since nineteen-one.
Twenty-three years of knowing how,
Fits us well to serve you now.



ATLANTIC CAN COMPANY

BALTIMORE - - - MARYLAND

We Manufacture for CANNERS:

Verticle Process Kettles
Horizontal Proocss Kettles
Agitating Process Kettles
Automatic Pressure Kettles
Continuous Non-agitating Cookers
Continuous Agitating Cookers
Crates
Cooling Tanks
Trolley (Systems)
Steam Hoists
Picking Tables
Peeling Tables
Pea Washers
Steam Exhaust Boxes
Water Exhaust Boxes
Milk Sterilizers
Milk Fillers
Milk and Corn Shakers
Automatic Shakers
Continuous Shakers
Test or Pilot Sterlizers
Cross Conveyors
Tomato Holding Tanks
Tomato Inspection Tables

Berlin Continous Cookers

Continuous Cooker

Berlin Cookers are made for every purpose. No type of Cooker is fit for all kinds of foods.
Berlin Cookers are made in the following distinct classes:
Continuous Open Cookers which agitate the food while cooking,
Automatic Pressure Cookers which agitate the food while cooking,
Continuous Open Cookers which do not agitate the food while cooking,
Automatic Pressure Cookers which do not agitate the food while cooking,
A Contenuous or Agitating Cooker for every purpose for every kind of food.

BERLIN CANNING MACHINERY WORKS

The Markets

BALTIMORE, JUNE 30, 1924

WEEKLY REVIEW

Canners Are Wise Not to Sell More Futures—Crops and Weather Conditions Make the Season's Pack a Big Problem—Pea Canners Making Good Packs—Tomato Plants in All Stages of Growth—Corn Growers Are Having Troubles—Buyers Foresee Limited Packs.

WISDOM—The canners are wise in getting off the market on both spots and futures at this time, and particularly on futures. There are so few spots of any kind left that there necessarily must be slow trading in them, but that is exactly what makes the situation so strong. It does not require a soothsayer to predict that on most canned foods the spot market will be bare before new goods can arrive; the finest condition the canned foods industry has ever seen. Imagine great trading centers reporting that if you want canned tomatoes you must go to Maryland for them, as that State seems to be the only one which has any spots. Maryland holding a corner on canned tomatoes! Everybody else, of course, knows this but Maryland, or else the Maryland canners would be asking a price for their stocks, and this they will not do. Poor old Maryland! Even after all opposition has been removed, and the market given to her to do with as she pleases, she cannot see her opportunity or has not the courage to ask a price. True, when the last case of No. 2 tomatoes was going out the door sold, and the property of someone else, Maryland did perk up and ask a premium, but she had no No. 2s to sell. And it will probably be the same with No. 3 tomatoes, which are quoted today here at $1.35 to $1.40, although Indiana sold out at those or better prices many months ago, and is now out of both the spot and future market. It would be difficult to construct a position where Maryland tomato canners would have the heart to ask their price and stand for it. It probably just can't be done. For if it can't be done under present conditions, it can't be done—that is a cinch.

Everything has conspired in favor of the canners this season. The record clean-up of all markets on all kinds of spots, and then a curtailment of probable packs in 1924, through unfavorable weather and bad growing conditions. No spots and limited packs is the way it looks today.

THE WEATHER—Nearly every section has been able to report warm sunshine and fine growing weather, but also nearly every section has had to report a continuance of the rains at almost regular intervals. It seems impossible to get two days together without rain. We have not had it here. The heat has been intense this past week, but almost every evening a severe storm has come up, deluging the earth with water, and often with hail, and the high winds tearing up trees and uprooting crops. And what has been happening here would seem to be but a replica of what has been happening in all other sections. At least, so far as canners' crops are concerned, the growers are having their troubles in getting them into the ground, for they cannot get the ground dry enough to plant. They have been taking every chance to get corn into the ground, and likewise they have been setting out tomato plants between rains and at every possible opportunity; but this means a very spotty condition, and not the best results by any means.

From Indiana comes the report: "Our canners are still planting corn and setting tomatoes, so anything like a normal crop cannot be hoped for." Down on the 'Shore, while the pea canners have been able to start and are making good progress, with hopes for a full, average pack of fine quality, they are afraid to say so from day to day because of the frequency of the rains and the danger that all may be ended at any moment. A few more days and they will be done with their peas over there, and the Western Maryland pea canners are beginning, and have good prospects, under the same kind of uncertain conditions. Wednesday night, for instance, brought a small-sized cyclone, following a day of intense heat, and some sections of the counties north of Baltimore, where peas are grown for the canners, they had heavy hail. It needs no explanation by us what a heavy hailstorm can do to peas which are ready for canning. But this gives you an idea of the sort of fear with which these canners are now operating.

In the meantime while they are canning peas, they are also busy setting out tomato plants and planting corn here at the beginning of July. Some corn is up and looking fairly well; other patches are missing in too many hills, and what is up looks yellow and sickly. The only thing that is having uninterrupted growth and flourishing luxuriantly is weeds. And with a heavy rain every other day, these weeds will gain the day.

Tomato fields are in all stages of growth. One field, located on a gentle slope and well drained, will show plants 8 to 10 inches high and bushing nicely, with the color fine and the promises good. The next field, on the downward grade, the plants are spindley, poor and often entirely gone, and the field looks as if it had not yet been set. So there is your range of tomatoes: plants not yet set to plants making good growth, but the latter are decidedly in the minority. No one seems anxious to venture a guess as to the extent of the plantings—that is, as to how much of the intended acreage has been set out—the grower can answer only for his own plot, and the canners cannot get a definite line. The fact is that all are still in the hopeful class—hoping for better weather for a long-enough spell to get the plants out and going well. The heat is almost too intense for planting, but the growers are not waiting on that.

This is an uncertain, rambling account of crop conditions; but that is exactly the condition in which crops are now, and if anybody can make out of this big crops and full yields to come to the canneries at any time, even though late, they are better optimists than the men now on the ground trying to plant the crops, or the canners waiting for them.

THE MARKET—And that is why we say the canners are showing good sense, wisdom, in refusing to consider further future business. If spot canned foods next fall, particularly after the big Canned Foods Week in November, are not worth and bringing from 15c to 25c per dozen more than the canners can now get for them as futures, then there is nothing

in market considerations. This may not be a certainty, but it is as nearly a certainty as can be predicted upon a future contingency.

Most gamblers want some chance to win, but the canner who sells futures at today's prices is forfeiting all chances to win and giving the buyers a sure thing.

The market is in really very good condition. The buyers realize the situation, and while they have not changed their methods of buying from hand to mouth, because the banks will not allow them to do so, they are taking what goods they can find and are quietly taking good future business where they can induce the canner to accept it. They now see that they will not likely get all the goods they have bought as futures, the season is to erratic to expect such an outcome, and so they would extend their buying so that they will have canners in many sections upon whom they can hope to get a good share of their orders. In this way they will not be dependent upon one section or one set of canners for all their wants, for if anything should happen to that section, they would be caught without the goods they must have. This has added strength to the market and it ought to tell the canners that they should be careful, and if the buyers insist upon futures, put the price at a figure which will protect themselves. If you can't stay out of the future market, then put your prices at a figure which will pay you for the risk you take. Spot goods will certainly be worth good prices this fall, as we have already said; then why give them to the buyers now at low prices?

There are no changes in market quotations worth particular notice, but all items are strong and showing a tendency to advance.

NEW YORK MARKET

Steady Volume of Business—"Day-to-Day" Buying Replaced the "Hand-to-Mouth" Buying—Sensational Business in Future Fruits—Good Inquiry for Spot Fruits—Maryland Has Corner on Spot Tomato Supply—Corn Advancing—Pea Canners Rush New Peas to Keep Market Supplied—Shrimp Active.

New York June 26, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

STEADY TRADING—There has been a steady volume of canned foods trading during the past week, and the market has displayed a firm undertone. Wholesale grocers are not carrying large stocks, and are having difficulty in securing sufficient stocks of some grades and varieties. Despite the general shortage however, many buyers are operatnig on a day-to-day schedule and are permitting their holdings to practically clean up before buying more. This has resulted in a "peddler" business on spot, according to the brokers, and the latter say that they have to do as much work now in locating and selling a 25 or 50 case lot as they woud normally do on a carlot order. Jobbers have evidently determined that they will not allow the market to go into a price advancing stampede, and they are successful in preventing any sensational gains.

New Pack Fruits—Business in new pack California fruits has not been sensational in character, and there has been a disposition on the part of many buyers to cover only their early requirements on certain items, and to buy sparingly on others. Peaches have perhaps been the most popular of canned fruits since the naming of opening prices last week. The trade is showing a little more interest in pineapple. Cherries are neglected.

Spot Fruits—Canned fruits continue in small supply locally, and there is a good inquiry with the price basis well maintained. Stocks in distributors hands, both wholesale and retail, are not excessive, and will be near the vanishing point on many varieties and grades when first shipments begin to arrive out of the 1924 pack.

Tomatoes—The spot position continues a firm one. Indiana is through on 1923 pack, Maryland now being the chief source of supply. And stocks held by Maryland packers are not excessive. Maryland packers quote standard 1s unchanged at 57½ to 60 cents per dozen, 2s at $1.15 to $1.20; 3s $1.35 and 10s $4.00 to $4.15, all prices f. o. b. country cannery. Holdings of 2s have been materially depleted by recent buying.

Future Tomatoes—The market has stiffened somewhat, following the action of many packers in withdrawing. As one Southern broker explains it: "Due to the increased risk in the crop hazard caused by the late, wet spring, many of our packers are withdrawing future prices on both corn and tomatoes. The situation is very unfavorable for both the grower and canner." Prices quoted by packers who are still offering range as follows: Standard 1s 55 cents; 2s, 85 to 87½ cents; 3s $1.25, and 10s $4.00, all f. o. b. country cannery. For shipment from Baltimore City canneries, the market on future tomatoes holds as follows: Standard 1s 60 cents; 2s 90 cents; 3s $1.30, and 10s $4.25, f. o. b. There has been an increase in the demand following reports of crop damage and the general late season.

California Tomatoes—Although irrigation troubles are reported in some sections of California, the general outlook is favorable for a good pack of tomatoes this season. Canners continue to quote $1.15 per dozen on standard 2½ in puree, f. o. b. cannery.

Standard Corn Higher—Reflecting a material increase in demand for standard corn, the Southern market has advanced to 95 cents firm, f. o. b. cannery for No. 2s, with extra standard 2s strong at $1.05. Buyers who have been placing credence in the reports of large stocks of cheap standard corn have now discovered that the corn offering at "cheap" prices was likewise "cheap" corn, and that stocks of full standards are by no means as large as they had believed. Consequently there has been quite a move to cover on this popular item.

Future Standard Corn—The market for future Southern standard corn is holding firm at 90 cents per dozen, with extra standard at 95 cents per dozen, and fancy at the usual premium of 5 cents per dozen over this price. Standard No. 2 Country Gentleman holds at $1.00, with Shoepeg at $1.10. There is more interest being shown in the future corn situation.

New Peas—Southern packers have come to the rescue with rush shipments of new pack standard peas, and this has relieved the spot shortage a little at least. There is still a heavy demand for standard peas on spot, however, with the supply falling short of the demand. The quality of the new Maryland and Delaware pack is reported to be very good in most instances this year. Buyers are beginning to shown concern over the Wisconsin situation, and it is feared that the backward season will not only cut materially into the yield of peas, but will likewise have an adverse effect upon the quality of the peas to be canned this year. With the other pea-packing sections running considerably behind normal this year, the market will remain more or less in the control of the Southern packers for some time yet.

Salmon—Business has shown a little improvement during the past two weeks, and the spot market is more active. As a result of the improved demand locally, there has been more interest shown in offerings for shipment from Seattle. Coast holders are quoting pinks at $1.25 per dozen f. o. b., with stocks reported rather well cleaned up. Alaska packers start the new season with stocks of reds also of small proportions, while there is practically no carry-over of chums.

Shrimp More Active—Quite an active call for shrimp was sprung up during the past few days. In some quarters this buying is attributed to the fact that the numerous out-of-town visitors here for the Democratic convention are calling for shellfish, but in trade circles this demand is considered the normal summer buying movement at this time, reflecting the current light holdings of the distributors.

Sardines—The market for Maine sardines continued unsettled. The supply is fair and prices quoted by different factors show considerable variance. However, the trade is beginning to inquire for sardines in larger quantities, and the outlook for the market is more favorable.

Tuna—There has been some business booked on new pack tuna fish on the basis of opening prices named last week. Distributors are carrying fair stocks of all but white meat tuna it is believed.

Notes of the Trade—Pratt-Low Preserving Co. and Filice & Perrelli Canning Co., two well known California fruit canning organizations, announced opening prices on their complete lines this week.

John Gilliam, well known broker, now associated with J. M. McNiece & Co., returned this week from a short vacation trip to Saratoga Springs.

REAL LUXURY.

"How much money would you lak to have?"

"How much? 'Nough so dat Ah could borrow a quartah whenevah Ah feels lak it."

HOME TRAINING.

Aunt—And were you a very good little girl at church this morning, Sallie?

Sallie—Oh, yes, aunty. A man offered me a big plate full of money, and I said: "No, thank you."

CHICAGO MARKET

Hot Weather, With Plentiful Rains—Turning to No. 3 Tomatoes —Corn Selling—This Item May Be Completely Cleaned Up Before July 15th—Fruits Dragging—Some Futures Selling—Canners Not Anxious to Sell Further of Peas or Corn—Market Better Cleaned Up on Spots and Futures Than Ever Before—Canned Salmon.

Chicago, June 27, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

HOT WEATHER—We have had warm growing weather in the lake region, but we have also had very heavy, warm rains, and what effect will be on the low lands, where corn and late peas have not yet been planted and where the tomato plants may be drowned out, is problematical. The weather predictors are promising us dry weather, free from rains, but up to the present moment, when it is raining hard, their predictions have come to nought.

Spot Canned Foods—Wholesale grocers are not buying twos tomatoes because they are not to be found except in Maryland and Delaware, and very few are to be found there, and as they are held at $1.20 per dozen, f. o. b. cannery, the price is proportionately too high and wholesalers will not buy them. I heard of one sale only this past week in Chicago of twos tomatoes, which was a sale of fancy grade at $1.27½ per dozen, f. o. b. Ohio. a small lot to clean up the remainder of a pack.

Wholesalers are buying No. 2 tomatoes, paying $1.30-$1.35 per dozen for them, f. o. b. Eastern canneries, they being at that price very much better value than twos at $1.20.

However, the market is now well supplied with fresh crated tomatoes from the South, and the demand for canned tomatoes is about at the minimum stage of the year. There is no demand for No. 10 tomatoes spot at all.

Corn—Spot canned corn is selling fairly well for standard grade when it can be found. There is no standard canned corn to be had in Iowa, Illinois, Wisconsin or Michigan at any price. Some extra standard can be bought in those States and also in Ohio at $1.05 to $1.07½ per dozen, but that grade is also growing scarce and will soon be cleaned up. There is very little demand for fancy corn for immediate shipment.

It looks as if all grades of canned corn will be entirely and completely cleaned up before the 15th of July and long before the first receipts of the new output of 1924 will arrive. Some wholesale grocers who have a small surplus and some canners who have some remnants of the 1923 pack of canned peas have been making low prices to the trade, and a little buying of spot peas has been stimulated in that way. This movement will undoubtedly clean up all surplus stocks. Wholesalers are inclined to wait for the arrival of new pack peas for which they have contracted, and they are trying very hard to avoid purchasing any spot stock, preferring to sell entirely out to wait for the arrival of the 1924 output.

Fruits—Canned fruits are not selling very freely for spot or immediate delivery because the city markets are now flooded with fresh fruits and melons of every description almost, and strawberries, California and Oregon cherries and plums are abundant in the fresh fruit stores as well as canteloupes and water melons. The prices asked for these goods are very reasonable.

Canned fruits are marking time and selling only to those who prefer the cleanliness, wholesomeness and convenience of canned fruits as compared with the fresh fruits.

Future Canned Foods—A few contracts for 1924 canned peas are being closed, but wholesale grocers have their wants pretty well taken care of, and not very many contracts are being entered into.

There is some speculative feeling and a rather quiet inclination to buy new crop canned peas, enough at least to cover requirements and sales that have been made. On the other hand, the canners are not disposed to push future sales, because they have already sold freely in futures, and the weather crop conditions are so irregular and indefinite that the canners are afraid to take on any more contracts.

This same situation applies to canned corn. A few contracts for future delivery are being entered into, but only a few. The weather conditions in relation to the 1924 crop of corn for canning purposes is so confused that canners are unable to estimate what their production will be and whether they have made sufficient sales for future delivery to cover probable reduced output; therefore, they are indefinite about contracting for any more canned corn for future delivery.

Canned peas, canned corn and caned tomatoes—three great staples—will be more completely consumed this season than ever before in the history of the industry—at least, it looks that way—and these three crops of canned vegetables are coming on to a bare market as dealers will be sold out completely. This situation has not occurred before for many years; in fact, I do not remember to have ever known it to exist as completely as this season.

The situation in relation to California canned fruits is that there is very little demand for spot goods and very few spot goods offering, but wholesalers do not appear to be very much infatuated or impressed with the prices of the new or 1924 output of California canned fruits which have been priced for the opening at about 5 to 10 per cent higher than the opening prices of 1923. I understand that there is considerable reluctance on the part of wholesalers who have placed S. A. P. contracts to confirm the contracts, and most of them are inclined to wait for a while in hopes that there will be a break in the line of future prices, and that they will be able to purchase from independent canners at considerable lower prices.

Canned Salmon—There is some pressure to sell canned salmon. Red Alaska 1s tall are offered freely at $2.25 per dozen, f. o. b. San Francisco and Seattle, and there seems to have been packed some surplus of fancy chinook salmon as brokers on the Pacific Coast are offering halves fancy chinook as low as $2.10 per dozen, f. o. b. cannery, and are inviting offerings at a slightly lower price. The warm weather has just set in, and the consumption of salmon will now begin and the demand will probably improve very soon.

Information from the Food Products Department of the Bureau of Commerce of the United States to the writer gives the exportation for 1923 of sardines from the United States to other countries as aggregating about $2,900,000. Of this quantity 80 per cent exported was of California packed sardines. Packers of sardines on the California coast have been putting up an article of fine grade and their fish are the genuine "Clupea" genus, the same genus as are the French sardines, and they are packing them in genuine olive oil and a fine quality of tomato sauce, and the very heavy predominance of their goods in the export of this country to other countries goes conclusively to show that quality will tell and that people want it and will pay the price for it. Maine sardines are made from young herring, which have a peculiar flavor which some people like and which some people do not like, and they are packed in cottonseed oil, which also has an individuality of flavor, and this explains why the California packers' sardines so heavily predominate in the exports.

NEED MORE MEMBERS, SAYS PAUL FISHBACK

"The membership turnover in this association (the National Food Brokers), is very small, but we need more members. Mr. Walter B. Timms, chairman of the membership committee, has been conducting an active campaign for new members, and such campaigns are productive of good results. The personal, individual appeal of an active member, who knows and appreciates the work the association is doing for brokers, and who is deriving the benefits of that work, is exceedingly effective," and continuing, the secretary says:

"Here are two good and timely selling arguments for prospective members. The first is that this association has wiped out the cost of membership. By obtaining exemption of food brokers from any further payment of the $50 occupational tax, we have given every broker that much to defray the cost of a membership. The $50 which would have gone to the Government July 1st, should come to us as an initiation fee. Next year, half the saving will suffice to pay annual dues; the other half will be clear profit, resulting solely from the existence of this association.

"Your second selling argument is the directory of members, soon to be published and mailed to 15,000 persons and firms, who as sellers, buyers or brokers are interested vitally in the service a broker renders. Publicity resulting from the listing of a broker's firm name, address, and index to the lines he sells, will be worth far more than the cost of a membership. It is publicity he cannot get in any other manner, because the list to which the directory is mailed is carefully selected, and each recipient is known to be definitely intrested in it and its contents."

ST. LOUIS MARKET

Market Normal for This Time of Year—Slow Sellers Are Moving Out of Stock—Lateness of All Crops and Danger of Frosts Before Maturity Inject Interest Into Canned Foods—"Bunching" of Peas Feared—Corn Is in Pretty Good Demand—New Pack Coming Into the Market—New Market Prices.

June 26, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

NORMAL MARKET—The canned foods business is about normal what it is generally at this season of the year. The fact that most stocks are light has caused the market to firm up. Jobbing stocks are now at a point where it is necessary to replace. Supplies have gotten so low that it is almost impossible to obtain assortments. There is a scarcity in most of the lines wanted, in fact, they are more scarce than at any time since the war. Operators who carry supplies through the season with only a limited trade in sight, are cleaning up lines that have heretofore been selling slow. New packs are late, some so late, that there may be an acute shortage in old packs, before they are received. This causes a wonder why there is so little interests. There has only been a fair volume of contracts made for vegetables. Tomatoes, however, have been largely contracted for, most of the business having been done early in the season. The buyer who has been late or who has bought but little is going to pay a premium for his delay. He will not be able to get the grades and sizes he wishes. They will go to the early buyers. Taking a general view of the situation, packing conditions are far from favorable and canners are taking chances on a late fall to allow for the crops to mature. They are alredy several weeks beyond normal. Not only are the crops late, but owing to the weather conditions, plantings have been reduced and the yield is not likely to come up to expectations. For this reason canners are not inclined to accept any more futures in many lines.

Peas—The quality and extent of the pea pack will depend greatly on weather conditions. Reports thus far are to the effect that in some sections the quality has been fine, but in others, Wisconsin for instance, it is feared there will be a bunching of early and late crop. This will surely result if a hot spell, which now appears certain, should hasten the maturity of plantings. It is said that canners are pretty well sold up on pea futures, because of the more extensive buying that has been done on contract, than of other packs. The uncertainty of the season makes canners a little doubtful on taking on new business, when they do not know whether they can or cannot handle what they have already contracted for. Few deliveries have as yet been made and those that have been delivered have been light, coming principally from the more southern sections. Canners from this section (the southern) have mostly withdrawn from the market. They have sold as much as they can carry in view of the unknown pack. It is the same case with the Western packers.

Corn—Corn is in pretty good demand. Most of the call is for standard and extra standard grades. Prices for these are being well maintained in the South and Middle West. Corn has been affected by the cold, wet spring. Most of the canners are indifferent because of weather conditions, on new business. Because of the shortage of spot, fancy corn has turned more attention to extra fancy. There is considerable more interest being shown in futures, because of the late season.

Tomatoes—There is no material change reported in tomatoes. No. 2s are strongest and most active. Because stocks in the hands of Southern packers are not more than enough to meet the present demand, has firmed up prices.

Miscellaneous—New pack string beans are being well received because of the spot shortage and there are few stringless beans to be had. Succotash, limas, spinach and asparaguss are in fair demand and are ready sellers.

Fruit—Standard California clings are of more interest than any other fruits. Stocks from the coast are nearly depleted and there is some speculative interest shown in spot. The market, however, still offers many inducements. Choice peaches are dull and featureless. There is a scarcity of pears, and they are held firm. There is a broader demand for pineapple. New prices are awaited with interest. Cherries are less active.

Milk—There is little change in the situation on evaporated or condensed milk. Some of the unadvertised brands are being shaded in price. Hot weather has increased the consumption of milk in ice cream making.

CALIFORNIA MARKET

The New Prices Were Well Received and Business Has Been Good—Pineapple Business Especially Good—Pea Season Over and the Pack Was Light—Peach Growers' Prices—Fishermen on a Strike.

San Francisco, June 26, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

THE NEW PRICES—The most recent feature has been the naming of opening prices on California canned fruits and berries and on Hawaiian pineapple by leading packers. These prices have been well received by the trade and early confirmations have been highly satisfactory. As was anticipated, prices on most California fruits are higher than those named last year, owing to the higher prices being paid growers for canning stocks and a short crop in many lines. Prices, however, are about the same as those which have been prevailing for spot stocks of late, there having been several advances made since the announcement of opening prices last year.

Opening prices on canned pineapple have been especially well received by the trade, according to various packers, and not only have confirmations been general, but liberal increases have been made to original orders.

Peas—The packing of peas in California is definitely at an end for the season and a very light output is reported, the crop having turned out poorly. According to general reports the California Packing Corporation will deliver about 45 per cent. on orders, the Pacific Pea Packing Company will deliver about 25 per cent. on No. 10s and 60 per cent. on No. 2s, while the H. G. Price Company will make full deliveries, having booked a light business.

Peaches—The California Canning Peach Growers' Association held its annual meeting recently at San Francisco and named prices on the 1924 crop of canning peaches. The price on No. 1 cling stones is $45 a ton, and on No. 2s is $35 a ton, as compared with $30 and $15 respectively received for last year's crop.

Fishermen Strike—About a thousand Japanese fishermen in District No. 2 have gone on a strike in British Columbia, according to Ralph E. Lanning, secretary of the Salmon Canners' Association, Vancouver, B. C. The fishermen are demanding that 25 and 37½ cents be paid for sockeyes, respectively, caught by cannery gear and their own gear, as against 22 and 24 cents offered by canners. The situation is not serious as yet, as the sockeye run has not commenced.

The annual meeting of the California Peach and Fig Growers was held recently in the headquarters of the organization at Fresno, and the old board of directors was re-elected with the exception of F. W. Yokum, of Merced, who was replaced by G. C. Caldwell, of Winters. Following the general meeting, the board of directors convened and re-elected J. F. Niswander president. The holdover of canned figs was reported to be very light and no more than sufficient to supply the normal demand until the new pack is ready.

What Canned Foods Distributors are Doing

Wall Street Discusses Possible Return of Big Five into Wholesale Grocery Business—Retail Grocers Talked Co-Operative Buying at Annual Convention—American Association Now in Washington—Grocery Trade Notes.

THE RETURN OF THE BIG PACKERS—Much has been said and written regarding the wholesale grocers' side of the consent decree case, and an equal amount of publicity has been given to the packers' side of the controversy.

It is interesting, therefore, so get an outsider's "slant" on the whole angle, particularly when that outsider represents busias a whole. The Wall Street Journal this week gives a complete summary of the consent decree tangle, under the heading "Packers in Grocery Business?" In their story they say: "The packers' consent decree case, which will be reopened in the Federal District Court in Washington in the fall, may open the way for Armour & Co. to continue in the grocery field. In 1919 the then 'Big 5' packers and the Attorney General entered an agreement whereby the packers consented to divert themselves of stock in stockyard companies and of lines of business, such as canned foods and preserves, not directly related to meat packing.

"The California Co-operative Canneries recently petitioned to have the decree modified or set aside. They held a contract with Armour & Co., made prior to the consent decree, by which the latter agrees to market 52 per cent of their entire output. Besides protesting on the grounds that their business will be materially injured if the decree is permitted to stand, the canneries also charge that wholesale grocers are using the decree to build up a monopoly.

"The Court of Appeals recently upheld the right of the canneries to intervene in the case, reversing the decision of a lower court. The Government brief filed in the Court of Appeals stated that the consent decree implied a violation of the antitrust laws by the packers. The packers entered the case, declaring that since they had violated any law, this stand by the Government nullified the decree. However, both briefs were thrown out by the court, and the packers do not contemplate further action in the case.

"Packing officials are unwilling to comment on the possibilities of their continuing in the grocery field, since they believe that any statements they might make would be misconstrued in view of present legal difficulties with the Government on other points.

"All of the packers except Armour & Co. have carried out the provisions relating to commodities not connected with the packing industry, and the Attorney General has declared that the spirit of the decree has been carried out by all. Armour is still operating and distributing products of its canning plants, but it has disposed of practically all of a $10,000,000 inventory of grocery products manufactured by other concerns.

"Swift & Co. segregated its canned foods business, which was handled by Libby, McNeil & Libby, in October, 1918, before the decree was made, and so had no extensive properties of this type to liquidate.

"Wilson & Co. segregated its grocery business at Austin, Nichols & Co., Inc., by distributing two shares of common stock of the grocery company for each 5 shares of Wilson common in 1919.

"Cudahy was never engaged in the grocery business to any great extent."

Pool Buying—Considerable discussion of pool buying by retail grocers' organizations was heard at the recent convention of the National Association of Retail Grocers, held in Los Angeles. The retailers condemned food manufacturers and packers who sell chain stores at jobbers' prices which are not made available to the independent retail grocer. Although the retailers' association, as an organization, has not gone on record as favoring pool buying by groups of retailers, in an attempt to eliminate the jobber and the jobbers' profit, it is known that this idea has met with considerable favor among the rank and file of the retail grocery trade, and numerous such buying exchanges are now in successful operation. The retail grocers of Brooklyn have such a co-operative buying organization, and this organization has grown remarkably during the past several years.

Discussing chain store competition and direct selling to the chains, H. C. Balsiger, secretary of the retailers' association, said: "Chain store growth is undoubtedly being influenced by the opening of more stores by the present larger systems rather than by an increase in volume on the part of those already established. The fact that such is the case indicates most positively that retail grocers are finding themselves in meeting this competition. Notwithstanding the boast of some operators that the gross volume of the chains would soon be 25 per cent of the entire retail grocery business, there is evidence to show that they are far from this figure, taking the country as a whole. Service is still a big factor on the part of many millions who are buying groceries every day. Retail grocers who know their business are no longer frightened by the chain store. When the competition cannot be met with superior qualities and service, many employ unique methods, such as combination policy, cash and carry in the basement or separate room, or a discount plan on cash and carry purchases, all of which retains and builds trade and takes advantages from the attractiveness of the chains for the customer who wishes to render his own service. We have had no serious controbersies with any particular form or group of factors, except a condition on the Pacific Coast, with reference to direct selling to chains on the part of some manufacturers who apparently could not resist the importunities of the chains and thus incur the displeasure of individually operating merchants." Secretary Balsiger quoted a well-known manufacturer on the question of co-operative buying, as follows: "An important factor to be reckoned with by the wholesale grocer is the increasing number of co-operative buying exchanges. These, by reason of their complication of multiple ideas as to management, credits, etc., are not destined to grow to any great magnitude, but they should receive the careful attention of the wholesale grocers lest they become important factors. The remedy is not through the manufacturer, but through the service of the wholesaler to the retailer. Render him such service as will make co-operative buying unnecessary and you will have solved this problem." In commenting on this, Mr. Balsiger concluded: "In other words, these houses are an effect—and not a cause. They are caused by conditions which have forced the retailers to them. Destroy the cause and remove the effect. While the prediction that the retailer-owned wholesale houses are not destined to grow to any great magnitude is, of course, debatable, the fact remains they are and have been growing."

American Moves—The American Wholesale Grocers' Association has removed its headquarters from Jacksonville, Fla., to Washington, D. C. The offices of the Association are rooms 900-904, Investment Biulding.

New Secretary—R. H. Rowe is now secretary of the American Wholesale Grocers' Association, succeeding A. L. Adams, who resigned a short time ago to enter the chain store business at Jacksonville. Mr. Rowe has been with the Association for several years, as editor and advertising manager of Facts and Figures, the official publication of the organization. He has a

wide acquaintance among wholesale grocers and specialty manufacturers. Mr. Rowe, educated as a lawyer and a member of the bar in Tennessee, later entered the newspaper field, having been connected with several well-known dailies in Atlanta and elsewhere before assuming the management of Facts and Figures.

Adjusting "Swells" Claims—The Holmes Co., canners, of Robbinston, Me., in a letter to the American Wholesale Grocers' Association, says: "We are requesting jobbers to furnish a certified statement, showing that HCO Brand spoils have been destroyed. As soon as this is done we will immediately adjust their claims. It seems as if this is very hard to get. They send invoices and demand payment, but as we cannot have these goods returned, it is absolutely necessary that we have proof that the cans have been destroyed."

Grocers' Stock Dividend—The Service Grocer Co., of Detroit, Mich., has declared a 45 per cent stock dividend. The company, which was organized as the Michigan Coffee Co., in 1917, reorganized in 1920 with $100,000 capital. The firm name was changed to the present style early last year.

Notes of the Jobbers—The Frank Grocery Co, jobbers, of Shreveport, La., are now settled in their new building at 400 Third Street, occupying half of a block.

The King Grocery Co., of Tupelo, Miss., has taken over the business of the Reeves Grocery Co., of Tupelo. J. A. King is president.

WHAT THE BROKERS SAY

Wausau, Wis., June 21.—This is going to be a snappy pea pack. Soil and weather conditions were unfavorable through the early spring. Seeding was greatly delayed. The unseasonably cool weather retarded germination and growth, until the last two weeks. However, Wisconsin has staged a very rapid come-back. The more seasonable weather recently has done wonders to the growing crop. On the whole, it now looks fine, although very late.

Ordinarily the pack down state starts around June 15th. This year there will probably be a few, although very few, peas packed during the last days of June. Generally speaking, the pack will not be on until after the first—probably after the fourth of July. Up-state packers will begin about the same time this year.

It is our guess that the capacity of most packers will be taxed to the utmost. The fear of the crop bunching, and the resulting poor quality, will make it necessary to work under high pressure throughout the pack. While most anything can happen to the crop yet, present indications are for a good pack, if the canners have the capacity to keep ahead of their peas.

There has really been some big business on future peas during the past week. It has been widespread and largely on fancies. This would indicate that the wise buyer realizes that quality, rather than quantity, will suffer in case anything happens to the crop.

GROCERS SUPPLY COMPANY.

Columbus, Ohio, June 24, 1924.

Since our last circular on corn we have had two or three days of warm sunshiny weather, but not enough to dry the ground sufficiently to enable the farmer to work it for replanting. In a number of instances farmers are refusing to consider this feature and will use the acreage on which they had contracted to grow sweet corn, for other purposes. The risk of loss at this late day is entirely too great for the farmer to chance. At least his yield on late plantings is never above 60 per cent of the early. After driving several hundred miles within the past week looking at the most discouraging looking corn fields I have ever seen, the most serious condition the farmer must content with at present is the rank growth of weeds in corn fields, due to continued wet weather. These weeds are very thick and now much higher than any corn I have inspected. The ground is too heavy for the farmer to turn these weeds under, and he is so far behind in his general farm work that he hasn't the time to attend to this, and every day means that much more damage in this respect. To us, from the reports gathered from different sections it looks like a 50 per cent. corn pack. It is out of the question to have a normal corn pack this year and anything under a normal pack means standard corn above $1.00. Already a number of our canners have instructed us that they will sell but a limited quantity at $1.00. We have two factories that will still take up to 2,500 cases each at 95 cents and one packer 2,000 cases at 92½ cents factory.

F. L. DUTTON COMPANY.

GOLD SEAL TIN PASTE

Reg. U. S Pat. Off.

For Spot Labeling

Gold Seal Tin Paste sticks your labels so that they *cannot be pulled off.* It never gets brittle nor allows the labels to loosen up on the dealer's shelf.

It comes ready for use without mixing, shipped in 5 gal. cans, 30 gal. and 50 gal. barrels.

— *Manufactured by* —

Dewey & Almy Chemical Co.

CAMBRIDGE, MASS.

Manufacturers of Dewalco Sealing Compounds, Soldering Fluxes, Labeling Gums and Pastes.

RECEIVER'S SALE

OF VALUABLE FACTORY PLANT AND EQUIPMENT.

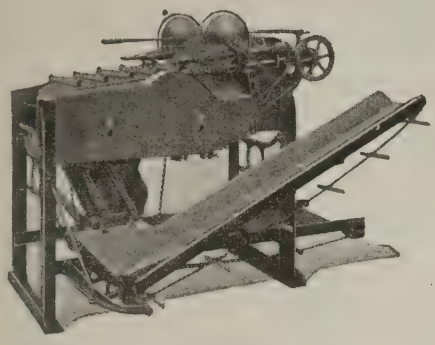
On premises lately occupied by the Mount Holly Canning Company, in Mount Holly, New Jersey, the subscriber will expose for sale, at public vendue, on

TUESDAY, JULY 8, 1924, AT 1 O'CLOCK P. M.,

the following:

Brick Factory of about 17,000 square feet of floor space, besides offices and boiler room, with ample land on which located, accessible from two streets and lying along a creek.

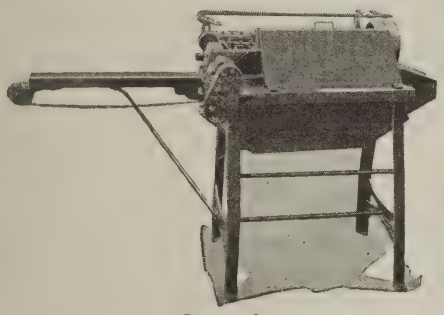
Vacant Lot adjoining.



2 125 H. P. Boilers with Stack.
2 100 H. P. Boilers with Stack.
2 800 gal. Vacuum Pans and Chambers.
4 100 gal. Pulp Vats with Copper Coils.
1 2000 gal. Pulp Vat with Copper Coils.
2 Union Vacuum Steam Pumps.
1 50 peeler capacity Peeling Table.
2 6 oz. Can Fillers.
1 36 Hole Filler.
2 Sprague-Lowe Pulpers.
1 Sprague-Lowe Exhaust Box.
1 Tomato Washer.
1 35 H. P. Steam Engine.
1 Union Air Compressor with Tank.
1 Steam Crane for processing.
17 Process Baskets.
4 Process Tubs.
1 Sprague-Lowe Scalder.
1 Sprague-Lowe Washer.
1 Electric Motor and Starting Box.
1 Fairbanks Scales.
3 Double Action Steam Pumps.
1 Extra large Burnam Vacuum Steam Pump.
6 125 lb. pressure Steam Traps.
2 Knapp Labelers.
1 Time Clock and Files.

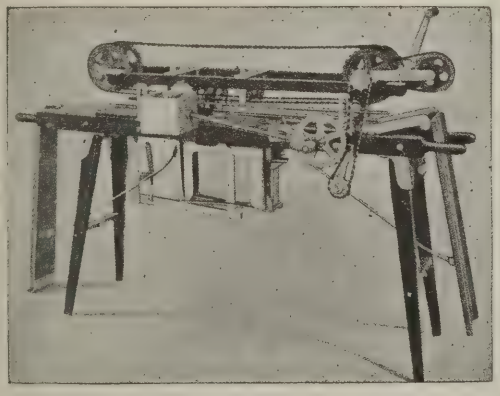
Also Pulp Finishers, Pulp Containers, Conveyor and Engine, Pulp Pumps, Overhead Track and Frame, Hand Trucks, Belting, Packing, Shafting, Hangers and Pulleys, Gas Stoves, Galvanized Tubs, Buckets, new Empty Cans, Office Furniture and other articles too numerous to mention.

Persons wishing to examine the property and an inventory and schedule of the machinery and other personal property prior to the sale will call upon the subscriber at his office, 115 Main Street, Mount Holly, New Jersey.



Conditions at sale.

RICHARD B. ECKMAN,
Receiver of the Mount Holly Canning Company.

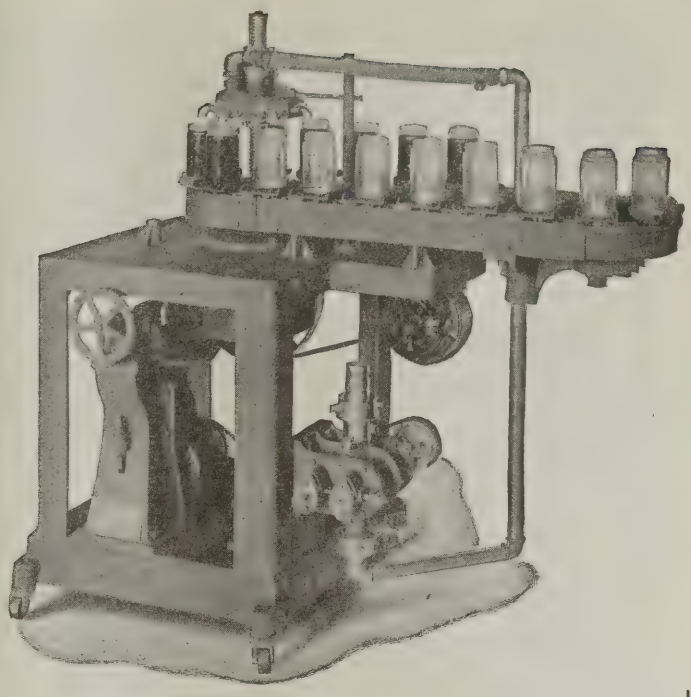


Patented
THE MORRAL CORN HUSKER
either
Single or Double

The fastest and best husker on the market. It has an automatic ear placer that places the ear at the proper place and careless feeders will not waste corn and it will save a great deal of corn over any other husker.

Patented
THE MORRAL CORN CUTTER
either
Single Cut, Double Cut or Split and Cut.

The Morral Corn Cutter is very simple in construction and is the most durable and best cutter on the market. It has a positive feed and will not clog up like other cutters when cutting nubbins and small ears. It is furnished with attachments for cutting Golden Bantum Corn, and it is the best cutter for cutting Bantum Corn.



Patented
THE MORRAL LABELING MACHINE

The Morral Labeling Machine is very simple in construction. It is a very strongly built and durable machine and has great capacity and is guaranteed to do satisfactory work.

It will pay you to write at once for our new catalogue, for prices, list of users and further information.

MORRAL BROTHERS

Morral, Ohio.

The Visco Filling Machine

Our list of mustard packers using this machine is practically a list of the large mustard manufacturers of this country.

The Visco is a high-speed machine that fills with uncanny and unvarying accuracy, without drip, waste or mess of any kind at any time.

Its great simplicity makes possible accurate adjustments for different size containers in a few minutes.

Its perfect design and construction are evidenced by the fact that the first machines furnished sone eight years ago are still in daily use.

This same machine fills jelly, apple butter, salad dressing, honey, etc. in an equally satisfactory manner.

The Karl Kiefer Machine Co.

Cincinnati, Ohio.

Your label is your salesman

Putting your product on the dealers shelves does not complete the sale. Why not help the dealer sell your goods by using labels that will create a favorable impression?

Labels should suggest that the contents are dainty and tasteful. We make labels that do this. Write us for particulars.

Consult our Trade Mark Bureau before selecting a new brand name—it may save you from conflicting with brands already in use.

SMILE AWHILE

SERVES HIM RIGHT.

There was a rapacious old colonel,
Who got wealth by means most infolonel.
When he came to his end
Good St. Peter did send
Him to dwell in perdition etolonel.

ENTIRELY USELESS.

"Yo' good-for-nothin' houn'! So yo' went an' pawned yo watch?"

"Might's well. What good is a watch ter me if Ah ain got money 'nuff to go nowheres notime."

SIMPLE SOLUTION.

Professor Twaddle had bought a new car and was demonstrating it by taking a spin with his wife. After a while he coughed deprecatingly.

"My dear," he said, with a note of apology in his voice "I'm sorry, but—er—I'm really afraid I've forgotten what one does to bring this machine to a halt."

"Oh Enos!" shrieked the lady, 'What shall we do?"

"Now, never mind, dear," consoled her husband. 'We'll just stop at the next garage and ask a mechanician."

AT ARM'S LENGTH.

He sauntered into the strange office with much self-assurance and an air of familiarity, threw down his business card and inquired:

"Who's the main squeeze around here?"

"Well," replied the good-looking stenog, "they'd all take me fer it if I'd let 'em."

"Deacon White," said Parson Jackson, softly, "will you lead us in prayer?"

There was no answer.

"Deacon White," this time a little louder, "will you lead?"

Still no response. Evidently the deacon was slumbering. Parson Jackson made a third appeal and raised his voice to a high pitch that succeeded in arousing the drowsy man. "Deacon White, will you lead?"

The deacon in bewilderment rubbed his heavy eyes and blurted:

"Lead yourself, I just dealt."

GRANTED.

Wifie (in a huff)—Oh, you needn't think you're so wonderful. The night you proposed to me you looked absolutely silly.

Hubby—A coincidence. The fact is I was absolutely silly.

NOTHING LEFT.

Alice—I hear Jack has broken off his engagement with Gladys. How did she take it?

Virginia—Oh, it completely unmanned her.

DESPERATE

An old negro woman passed before a notice recently posted by the sheriff and laboriously spelled out the large letters: "THIEF WANTED!"

"Reckon Ah better take it," he muttered, after some study. "Cindy said not to come home widout a job, an' dey ain't nothin' else Ah can do so good. But"—gloomily—"Ah sho' does hate dem dawgs an' bird shot."

NO TIME FOR SIGHTSEEING.

"And did you see service in France?" asked the lady of the house of the young colored man who had applied to her for a job.

"No, ma'am," was the reply "dey kep' us busy all de time diggin' trenches an' fightin'."

TRAINED IN THE ART.

Visitor—What became of little Bobbie Green, who could never learn to count above ten?

Mrs. Jones—Oh, he's the champion golfer at the country club now.

Vol. 47 BALTIMORE, JULY 7, 1924 No. 46

EDITORIALS

THOUGHTS OF "THE DAY"—We have been told that in many foreign lands the flag of their country is so carefully guarded—reverently guarded—that it is displayed only on certain set occasions, so that when its beautiful folds are unflung to the breeze the hearts of strong men swell up, bringing tears of joy to their eyes, and they uncover their heads as they voice their cheers at the sight of their country's banner. At this 4th of July season, when we celebrate the birth of our nation and its flag, this seems to the writer to be the spirit that should exist here; but does it? And why does it not? The answer may be found in that old adage, 'familiarity breeds contempt." The beautiful American flag is used too promiscuously, too much, every day and on every occasion. It should be held more sacred, used only on rare occasions, and then would come with its appearance that feeling of pride and patriotism that should be felt whenever the flag is seen. Of course, we may not speak of such things in these columns; we must sing our own song upon the one lone string—canned foods—but the temptation is great to scotch the spirit which has brought our patriotism into contempt, and made of the great and glorious Fourth a mockery and a sham. Wouldn't it be just fine to wake up to a 4th of July morning like we used to have when we were boys! When men were men and blood was red, and the sight of the Starry Banner thrilled our hearts and brought cheers to our lips, and the day was too short to proclaim our delight at belonging to the greatest nation on earth! When the "bang" of the double-headed Dutchmen and the boom of the cannon were followed at night with the swish and the glare of the skyrockets from every home and hamlet. They call it "Safe and Sane" now; instead it is soft and spineless and patriotism is in exact proportion. And it must be so when words are substituted for deeds, and talk for action.

"Trade" follows the flag!

"Sawdust an important factor in the meat industry," reads a heading in The Butchers' Advocate. Now we know where our board goes—into sausage.

ARE YOU WITH US?—Again we come to the time when we can be a lot of service to each other—through prompt, up-to-the-minute crop reports. We have the will and the service to disseminate the kind of information about canners' crops in every section; every canner wants this information. But we humans are a funny lot. We seem to think that someone should be constantly on the job gathering the information we need and want and always ready to furnish us with it. Leaving all bluff aside, and getting right down to brass tacks, suppose we had a large enough crew of reporters to cover this entire country, gathering the actual crop conditions and prospects daily, so as to furnish our readers with the detailed accounts which everyone of them would heartily welcome, what do you think you would have to pay for copies of this journal? They would cost about $100 apiece for each reader each week. That would be the answer to the thought in the back of your minds—why can't The Canning Trade furnish us with detailed crop information from all canning centers every week, and right up to the end of each week?

Well, it can be done, and we are perfectly willing to do it, and to stand the full expense attached to it. Let each one of you consider himself personally appointed as our representative in his respective locality, and his duty that of furnishing a weekly summary of crop conditions and prospects. Assume this duty on the same basis as you do your reports to your local Association, no report sent, no report gotten. Unfortunately, the canner who falls down on his job—or lays down on it—will get the reports which his fellow-canners send in, because we must send all canners the paper. But we have faith in our canner readers, and do not believe there is any proportion of "quitters" among them.

Won't you join with us in this effort to keep the whole industry—that is, all the canners—properly informed upon the progress of crops and the prospects for the packs? We will assemble these reports from all sections, arrange them and publish them, and in this way you will get a great mass of important information in return for the one piece of information which you send. This system, which we originated years and years ago, might easily be a most influential,

important feature to every canner. We will act as a clearing house, withholding your name or any details which you may send for our own personal information and guidance, or use it any way you desire. But we want you all to take a part in it.

We have sent out requests to a large number of readers, with stamped return envelope enclosed, and will do so every week during the season. At least answer these requests promptly, but don't wait to be asked. This is your invitation. Please consider it personal; join our staff and let us hear from you, so that all canners may know how to act, and help yourself while helping others. Begin now, and let's get this important department in full swing at once.

AND HERE'S THE REASON—Early intentions were undoubtedly to plant and to pack any immensely increased amount of canned foods during 1924, but our good friend, Dame Nature, has been playing many funny tricks with the weather and the crops. It is possibly the most unusual season any of us has ever seen. What will the outcome be? It is primarily important to keep informed upon the progress of crops. The whole canned foods market is better cleaned up of spot canned foods than ever known before, even during the war. The goods are gone, and if the canners will exercise a little judgment they can have the whole situation in their own hands. It is an oportunity that should not be missed or neglected. And we want to help you make the most of it, if you will but help yourselves.

SCIENCE IN THE USE OF NAILS —The old proverb, 'a stitch in time saves nine,' applies as pointedly to nails as to needles," says John F. Keeley, packing expert of the Department of Commerce, who is conducting, in co-operation with shipping industries, an exhaustive investigation of means of prevention of loss of goods in transit. That a timely nail is worth more than its weight in gold has been proved by tests of packing cases at the United States Forest Products Laboratory, which shows that the majority of failures of ordinary boxes is due not to the lumber of which the box is made, but to improper nailing. In many cases a better box can be constructed with thinner material by the use of a few more nails in the right places, making a material saving in initial cost of packing, as well as subsequent saving through less loss in the box car and on the concrete platform.

In making a packing case the nailer must use his own head as well as the nail's, declares Mr. Keeley. The proper nailing of boxes demands the use of the right kind of nails, the right size and the right number. The size and thickness of nails are determined by species of wood and thickness of boards. The woods commonly used for boxmaking purposes have been divided by the Forest Products Laboratory into four classes according to their strength and their ability to take and hold nails. White pine leading group 1, southern yellow pine group 2, red gum group 3, and hard maple group 4. The number and size of nails needed to make strong boxes out of the various woods, of different thicknesses, have been reduced to regular rules and charted. Charts by which anybody who can read may know just what nails to use and how many and where for every common kind of box wood have been prepared by the Commerce Department (Transportation Division), and may be had by anybody who will write to Transportation Division and ask for it. This chart, pasted up in the shipping room and used, means money for the user.

It is significant to note that cement-coated nails should be used in all box assembling with the exception of cleating when the nails are clinched on the inside. Cement coated nails have a greater resistance to withdrawal, thus making a tighter joint than is possible with smooth shank nails. If smooth shank nails are used, 25 per cent more nails should be driven to every nailing edge.

"Spare the nail and spoil the box" is Mr. Kelly's motto. The number of nails specified for different woods in the chart is not the maximum. Increasing the number of nails 50 per cent will increase the strength of the box 100 per cent on the average. The danger of splits from driving two or three times the number of specified nails is negligible. Nails are cheaper than wood. They not only serve to hold parts of a box together, but they provide rigidity. Splitting is more often caused by too large than by too many nails. With the Commerce Department chart showing the size and minimum number of nails necessary, the boxmaker will not go far wrong.

Calcium Cyanide for Chinch-Bug Control

In Cooperation With the Natural History Survey, Illinois Department Of Registration and Education.

By W. P. Flint and W. V. Balduf.

University of Illinois Agricultural Experiment Station.

CALCIUM cyanide was first used in 1922 as a means of combating chinch-bugs around the margins of infected fields of small grain. Experiments were continued through the season of 1923, a large number of tests being made during the latter season. In the first experiments this material was used alone as a barrier. The results showed it to be very effective, under some conditions killing every bug that came in contact with it, but its use in this way was so costly as to make it unpractical for general use on Illinois farms. Later experiments, however, showed that it could be used in combination with creosote and coal-tar barriers, thus greatly increasing their effectiveness without increasing the cost to a point where its use would be unpractical.

While definite recommendations of the best way to use calcium cyanide cannot be made from the results of two years' work, the results here presented will enable the Illinois farmer to judge for himself the best method of using this material on his farm.

In the Illinois experiments, four methods of using this chemical were tested:[2]

1. Laid in strips at right angles to a creosote or coal-tar barrier.
2. Dusted or scattered along a creosote or other barrier at the time of day when the bugs are most numerous.
3. Dusted over strips of trap crops sown between infested small grain and corn.
4. Alone as a barrier around the margins of the infested field.

Three forms of calcium cyanide were tried out: (1) flakes, which have the appearance of finely broken slate, the separate flakes being from one-fourth to one-half inch across and about one sixty-fourth inch thick; (2) granules, having the same form as flakes, but being much finer, the larger particles being only about one-eighth inch across; (3) dust, the material ground to a fine powder.

Used in Strips at Right Angles to a Creosote or Coal-Tar Barrier—In 1923 the method of control proving the most practical was the use of calcium cyanide strips laid at right angles to the creosote or coal-tar barrier. These strips are made by putting down one to one and one-half ounces of cyanide in each strip, laid from three to five inches wide and from six to eight inches long. These strips are made at right angles to the barrier, touching the creosote on the side next the stubble field. They should be spaced every two rods along the line. In the corners of the field, where the bugs usually gather in greatest number, it may be necessary to lay the strips closer together.

Chinch-bugs attempting to leave the fields of small grain and encountering barriers of creosote or coal tar are repelled by the odor of these substances. In the case of tar, they are held back by the stickiness of the material as well. Hence they turn and start along the stubble side of the barrier, seeking an opening through which they can escape into fields of corn or to other food plants. Half-grown young, or nymphs, travel along the barriers at the rate of five to six fee ta minute, and are almost sure to encounter a cyanide strip in five minutes or less after they get to the barrier.

Tests of this method extended over a period of two months in 1922 and a somewhat longer period of 1923, and were made under varying weather and soil conditions. Under some conditions pure dust was found to be the most effective form to use. When the soil is wet, the granules are better than the dust because they do not lose their strength so rapidly. The flakes also give better results than the dust when the ground is wet, but they are not very effective when the soil is dry or when the wind blows briskly. In general, granular calcium cyanide is the most practical form.

Care should be taken that the strips actually connect with the creosote barrier. The slope toward the barrier should be sufficiently gradual so that the cyanide will not roll down and away from the creosote.

A sprinkling can from which the sprinkling cap has been removed is a convenient vessel to use for pouring the cyanide. After a little practice one is able to quickly put down strips of approximately one ounce each at the intervals specified.

Strips Are Effective for a Limited Time—When the soil is dry and the wind strong, most bugs can cross the cyanide strips without being killed. Under more favorable conditions, however, the strips are effective up to five or more hours. Usually on warm, bright days the heavy movement of chinch-bugs starts between 2:30 and 3:30 in the afternoon, the bugs gathering along the barrier in greatest numbers between 3:30 and 5:30. The most effective kill can therefore be made by laying the strips between 3:00 and 4:00 o'clock in the afternoon. Except when the soil is dry and the wind high, strips laid at this time remain effective for the rest of the afternoon and may be counted on to kill 75 to 95 per cent of all bugs reaching the barrier.

If the amount of cyanide in the strips is doubled, and the flake or granular form is used, some bugs will be killed the following forenoon, if no rain has fallen

---

[1] NOTE—Calcium cyanide is a cheap form of rather low-grade cyanide. It has about half the strength of the sodium cyanide generally used in hydrocyanic acid gas fumigation of fruit trees, greenhouses and flour mills. When this chemical is exposed to air containing the usual amount of moisture, or is applied to damp soil, the poisonous hydrocyanic acid gas is liberated in sufficient quantities to kill insects or other animals exposed to it, for varying periods of time.

[2] Some tests were also made to determine the effect of calcium cyanide dust when applied directly to corn. While it proved very effective in killing the chinch-bugs clustered on the plants, it cannot be used for chinch-bug control because it nearly always penetrates the curl of the leaves and causes the death of the plant or a severe burning. A 2 per cent nicotine dust used in this way is just as effective as calcium cyanide dust in killing the bugs, is cheaper, and does not injure the corn.

during the night; but the strips will not remain effective during the entire day. Since the bugs seldom migrate in large numbers in the morning, the kill is not sufficiently increased to warrant the added expense of using these larger amounts of cyanide.

Occasionally on cloudy days there is a considerable movement of chinch-bugs all day. In such weather the cyanide should be applied between 9:00 and 10:00 o'clock in the forenoon, and another application made in the afternoon if necessary. Because the creosote or coal-tar barrier holds the chinch-bugs in the field, it is very seldom necessary to make more than one application a day, even during cloudy weather.

Expense of Combined Barrier—The total cost for a quarter of a mile of creosote or coal-tar barrier and cyanide strips along it is about $21 for the migration period. This is figuring cyanide at 20c. a pound delivered to the local shipping point and the cost of creosote or coal tar at $5 to $7 for the season. This will not be thought too expensive to be practical if one remembers that he is not only stopping the bugs but is actually killing the majority of them. Post holes are unnecessary where calcium cyanide cross strips are used, for the cyanide kills more bugs than are usually caught in the post holes. The saving of the labor of digging the post holes helps pay the expense of the cyanide.

Used Along a Creosote or Coal-Tar Barrier—The second method of using calcium cyanide in combination with a creosote or coal-tar barrier is to distribute small amounts along the barrier, on the side of the field of small grain, instead of in strips at right angles to the barrier. To be effective, the calcium cyanide should be laid down each day when the bugs are gathering in greatest numbers. For this method the cyanide dust has been found most practical.

The expense of this treatment is somewhat higher than that of the right-angle strips, but on windy days, when the soil is very dry, it is more effective and more convenient than the strips. The cost of the calcium cyanide is from $1 to $1.50 a day for each quarter-mile of barrier.

This method has the disadvantage of requiring a close watching of the barrier, for in order to get a maximum kill the dust must be applied when the bugs are present along the barrier in greatest numbers. While this is usually about 4:30 in the afternoon, the time may vary a great deal with weather conditions. One application a day is necessary. This kills all the bugs massed against the barrier at the time and those coming into the dusted area for ten to thirty minutes thereafter. The duration of the kill depends upon weather conditions.

How to Apply the Dust—The calcium cyanide dust may be applied with a blower duster or a home-made shaker. The duster is of the type commonly used for dusting truck crops or small fields of cotton; it costs from $10 to $25, and is apparently no more effective for this purpose than a home-made shaker. A convenient and efficient shaker can be made in the following way:

Obtain a gallon or half-gallon tin pail with a tight-fitting lid. (The lid is important in confining the fluffy and poisonous dust.) Make an extension bail by nailing narrow strips of wood eighteen inches long to opposite sides of the pail and joining them above with a piece of broomstick. (The extension bail enables the operator to walk erect and at the same time to distribute the material close to the ground so that it will not be carried away by the wind.) From the outside of the pail, punch four to six holes per square inch in the bottom, using an eight-penny nail.

Fill the pail two-thirds full of dust and walk along the barrier, forcing the material out by a jiggling motion. The dust may be applied as rapidly as one can walk down the side of the field. Approximately one pound of the dust to thirteen rods of barrier was found to be effective.

Directions for Making a Creosote Barrier—A creosote barrier is made by throwing up a ridge of earth around the infested field of small grain and applying creosote along the brow or the ridge on the side toward the field of small grain. The furrow should be turned away from the grain field.

The creocote is applied with a galvanized or tin bucket having a six-penny nail punch in the side near the bottom. The stream of creosote should be directed against the brow of the ridge on the side toward the field of small grain, as above stated, so that the bugs in attempting to leave the field will crawl up to it. The creosote must be renewed once a day during the first week, and should always be applied on the same line. After the first week an application every other day is usually sufficient.

The application should be made usually about 1:00 o'clock in the afternoon, before the bugs have gathered along the line. It is the odor of the creosote that keeps them from crossing the barrier; consequently if the line is renewed when the bugs are massed against it, many become confused by the strong smell of creosote in the air and run over the barrier.

A barrel of creosote, on an average, is required to maintain a half-mile of barrier during the period the bugs are leaving the wheat stubble. The creosote should preferably be of a grade with a high napthalene content.

A line of ground limestone is sometimes spread along the brow of the ridge and the creosote applied on this line. Limestone retains the odor of creosote better than does the soil and so increases somewhat the effectiveness of the barrier.

Directions for Making a Coal-Tar Barrier.

Coal tar may be used as a barrier in much the same manner as creosote, but the ground on which it is poured should be nearly level and should be compacted as firmly as possible, and a larger quantity of coal tar than of creosote will need to be used.

It must be borne in mind that the effectiveness of the coal-tar barrier depends largely on its sticky character. It will have to be renewed more frequently than th creosote, and since about twice as much coal tar as creosote is required, this kind of barrier usually costs more than one of creosote.

Coal tar for this work may be obtained from gas plants in any of the larger cities. There is a wide difference in the grades that may be obtained from different plants. Coal tar which contains practically all the creosote is much more effective for barriers than that from which a part of the creosote compounds have been distilled.

Used on Trap Crops—Many attempts have been made to control chinch-bug migrations by stopping the bugs in narrow trap strips of their favorite food plants sown between the small grain fields and the fields of corn or other crops to be protected. There seemed to be a possibility of using calcium cyanide with such trap crops by applying it when the bugs were gathered in the trap strips, and in 1922 some experiments were

AN INCREASING FIELD

Ability to place the finest fruits and vegetables within the reach of everyone, regardless of season, has created a tremendous field for the canning industry.

And the demand is yearly increasing as better methods and greater care conserve the natural flavor and rich wholesome nutritiousness of delicious foods.

Among these better methods the use of

Wyandotte Canners Alkali

FOR PEELING

ranks as one of the greatest contributions to better canning production because:

The solution stands up for greater length of time.

It will not easily discolor or darken the peeled product.

Is not so irritating to hands of sorters and gives off a minimum of fumes or gas.

It peels quickly and rinses easily and completely.

It shows a low peeling cost.

The increasing demand for Wyandotte Canners Alkali is your guarantee of its distinctive efficiency and economy.

Indian in circle

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan.

made with this method. No special trap crops had been sown, but strips of wild grasses growing between the small grain and the corn were dusted with calcium cyanide and a fair kill of bugs was obtained.

In 1923 this trap crop and cyanide combination was tested more thoroughly. Strips of oats, millet, Sudan grass and corn were sown between heavily infested fields of small grain and of corn. These strips were treated with flake, granular and dust calcium cyanide at varying intervals and at varying rates of application. Although these tests extended over the migration period of one season, the results were not conclusive. Apparently this method is not so effective as the creosote barrier with the cyanide laid along it or in strips at right angles to it. However, the method may be worth trying under some conditions.

Of the trap crops used on the University Farm in 1923, Sudan grass was decidedly the most effective. It is very attractive to chinch-bugs and withstands a considerable amount of feeding by them before it is killed. It is vigorous, and hence can also endure the bruising by teams and machinery which occurs in cultivating the corn. It is not easily killed by heavy applications of calcium cyanide, and the sheats of the leaves fit so tightly to the stems that chinch-bugs cannot get between them and the stalk and thus be protected from the fumes of the gas. The rows of Sudan grass should be sown thickly and close together, so that a bug can scarcely pass through the strip without encountering a plant.

Some tests with rye made during the latter part of the summer showed that this plant is apparently second to Sudan grass as a trap crop. It is hardier than oats and nearly as attractive to the bugs as Sudan.

Millet and oats were found to be quite susceptible to cyanide.

Corn, even when seeded with a drill, formed a very poor trap crop, many bugs going through the strip and into the field of corn beyond. The corn was also very susceptible to the effects of the cyanide dust, one or two dustings killing the plants.

From the results of this work thus far, the following statements can be made:

To be in the best condition for stopping the bugs, a trap crop should form a thick, close covering over the ground, and should not be more than six inches high at the time the chinch-bugs migrate. For this reason, the trap strip should not be sown when the corn is planted, unless rye is used. Sudan grass should be planted one to two weeks after the corn is in the ground. The time of planting depends, however, on the expected time of small grain harvest, and not on the size of the corn. The trap strips should be three and one-half feet or more wide, and to insure a thick growth, they should be sown with about one and one-half times the usual amount of seed.

In this method of using calcium cyanide, dust was found to be the most desirable form.

The dust may be applied to the trap crops by means of a duster or a home-made shaker. The shaker is not so good for this purpose as the regular blower duster; however, it gives a very fair distribution of the dust, providing the trap strip is not more than six inches high. The trap strips must be dusted once a day when a heavy migration of the bugs is taking place. The dusting is most effective when done between 4.30 and 5.30 in the afternoon.

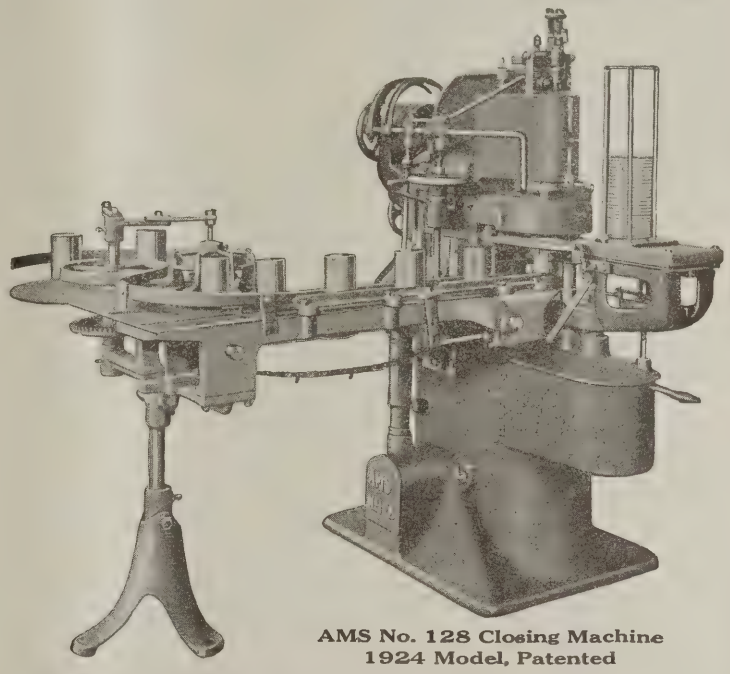
Judging from experiments made thus far at this station, calcium cyanide dust must be applied at the rate of about one pound for each two and one-half rods of trap strip three feet wide. This is at the rate of one pound of dust to each one hundred and twenty square feet. Under favorable conditions, such an application kills from 80 to 95 per cent of the bugs gathered in the strip, but when the wind is strong and the crop dry the results are not nearly so good. The amount of kill seems to depend in a general way on the amount of moisture present in the trap crop, the velocity of the wind, the height and density of the trap strip, and perhaps some other factors.

Calcium cyanide granules may be used in treating these trap strips and can be applied by hand at the same rate as the dust. Where the trap crop is wet with rain or dew, the granules are seemingly fully as effective as the dust, but on dry soil and plants they do not result in so large a kill.

The above statements are not to be taken as definite recommendations for the use of the trap strip and calcium cyanid combination for chinch-bug control. It will be necessary to carry on experiments for one more season at least before definite recommendations can be made.

Used Alone as a Barrier—More than three hundred separate tests have been made in Illinois to determine the practicability of the flake, granular and dust forms of cyanide used alone as chinch-bug barriers. Under favorable conditions it was found that nearly all the bugs attempting to leave a field of small grain on foot may be killed along such a barrier, if a sufficient amount of the cyanide is applied. Under less favorable conditions, however, the results were extremely variable. In some kinds of weather one-half to one-fourth pound of cyanide per rod of barrier killed all bugs attempting to cross it during a period of three to five hours. With other weather conditions, the same amount permitted 50 per cent of the bugs to cross in fifteen to thirty minutes after it was applied.

In these tests the calcium cyanide was used in various positions and at various rates. It was used on soil from which all vegetation had been removed, on the top of the plow furrow ridge, in strips in the stubble (which protected it somewhat from the action of the wind and sun), and in the bottom of a plowed furrow or trench dug around the margins of the field. Only when used in a furrow or trench did it give promise of having practical value as a barrier, under the conditions encountered. Used in this way the gas is somewhat confined, and if the soil is damp and little or no wind blows down the furrow, the gas accumulates sufficiently to kill most of the bugs over a considerable period of time. If the soil is dry, and the wind is strong along the furrow, the kill is small, even when the cyanide is used in the bottom of the furrow.



In Table 1 are shown the results of 144 tests of cyanide used in the furrow; they give an idea of the diverse effects of the chemical under different weather conditions encountered.

ROBINS ROTARY TOMATO WASHER.

THE BLACK ROT IN TRI-STATE TOMATOES

Serious Infection of Troublesome Disease

Speaking of this trouble, Dr. T. B. Symons, of the University of Maryland, says:

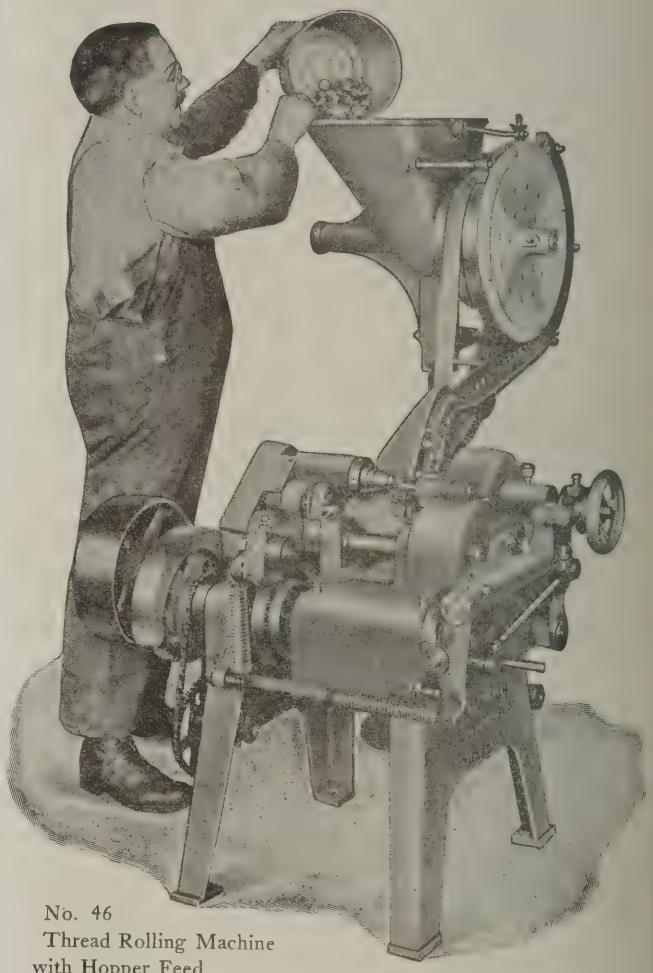
"Tomato production on the Eastern Shore, already expected to be below normal as a result of the wet weather and a scarcity of plants, is likely to be reduced still further by an unusually severe epidemic of early blight which is attacking plants in the fields and seriously jeopardizing the crop outlook, according to Dr. R. A. Jehle, plant pathologist for the University of Maryland Extension Service.

"The disease is very prevalent in Dorchester County, says Dr. Jehle, and is likely present in other counties of the Eastern Shore. Its spread has been favored by the wet weather, and it is particularly noticeable on plants which were not well sprayed in the plant beds.

"Early blight attacks the stems and leaves of tomato plants and appears as a sunken brown patch, says Dr. Jehle. The stem becomes weakened where the patches appear and the plants are easily broken. If not checked, the disease is likely to circle the stem and cause the death of the plant.

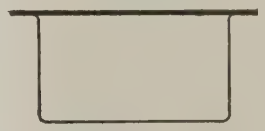
"There is no cure for the disease, but its spread to uninfected plants and to other parts of the same plant can be checked by the use of Bordeau mixture spray, consisting of five pounds of bluestone, five pounds of stone lime and 50 gallons of water.

"While it is not customary for growers to spray tomatoes after they are set in the field, Dr. Jehle is recomending this as the only possible means of preventing serious losses where the disease has become established. One and a half pounds of arsenate of lead or one pound of calcium arsenate should be added to the Bordeaux mixture to control potato bugs, which are troublesome in the Eastern Shore tomato fields this year, says the specialist. The spraying in the field should continue at intervals of ten days or two weeks and as long as wet weather prevails."



And a well-known observer of tomato crop conditions wrote us this week:

"Am surprised that you have not made any comment on the Black Rot which is developing in tomato plants throughout the Peninsula, and more especially in Talbot, Dorchester and Caroline Counties, for these conditions have been known for two or three weeks at least.



"Furthermore, all canners in our territory have withdrawn from the market, and they find it impossible to contract for any additional acreage at any price. There has been acre after acre of tomatoes plowed up. Some have been re-set, but quite a few fields are being planted with other crops.

"These conditions are really alarming and are far more serious than anything that has ever attacked tomato plants before, and we think all canners should be posted as to these conditions, so as to protect them as far as possible to keep them from overselling on futures."

WILL SEEK TO AROUSE VOTERS TO THEIR DUTIES

Merchants' Association of New York Asks the Chamber of Commerce of the United States to Call a Conference of Representative Organizations for the Purpose of Stimulating Interest in Selection and Election of Candidates for Public Office.

FOR the purpose of arousing a greater sense of responsibility among the voters of the country, The Merchants' Association of New York has asked the Chamber of Commerce of the United States to call a meeting of representatives from typical commercial and civic organizations to consider a continuing program of action.

It is hoped that organizations representing the economic and civic life of the Nation may be enlisted in the movement and that eventually a change of mental attitude may result throughout the country toward the performance of political obligations.

For Party Affiliation—It is the belief of the advocates of this movement that all voters should affiliate themselves with parties and that they should participate in the choice of candidates for public office as well as in the election of such candidates. The movement is not to be confined to any one party nor to any one election, but, if plans are carried out, it will be broad in its scope and continuing until its objects have been attained.

The matter was brought before the Board of Directors at its meeting last Thursday by President Lewis E. Pierson, who has given much thought to the need for awakening the electorate to its governmental responsibilities.

The Stay-at-Home Vote—Mr. Pierson said that only about one-half of the qualified voters in the country took part in the Presidential election four years ago. He called attention to the fact that 7 per cent of the voters of Florida elected a United States Senator, and that a minority almost as small elected a Senator in Oregon. He pointed out that voters who failed to discharge their duties had no right to complain afterward of the kind of government they received.

He told his associates that in discussing the matter with others he had found many who believed as he did—that something ought to be done to bring about a change of mental attitude toward participation in politics. With this object in view, he had suggested to Mr. Julius H. Barnes, President of the Chamber of the United States, that the national organization might be of great assistance in arousing the voters it was found to be within the scope of the Chamber. Mr. Barnes expressed the opinion that the matter was one that the Chamber might properly consider.

Formula for Consideration—The directors of the Merchants' Association, after hearing what President Pierson said, unanimously voted to send the following formula to the National Chamber for its consideration:

"Whereas, The continued existence and successful operation of our representative form of government of the people, by the people, for the people, depends upon

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

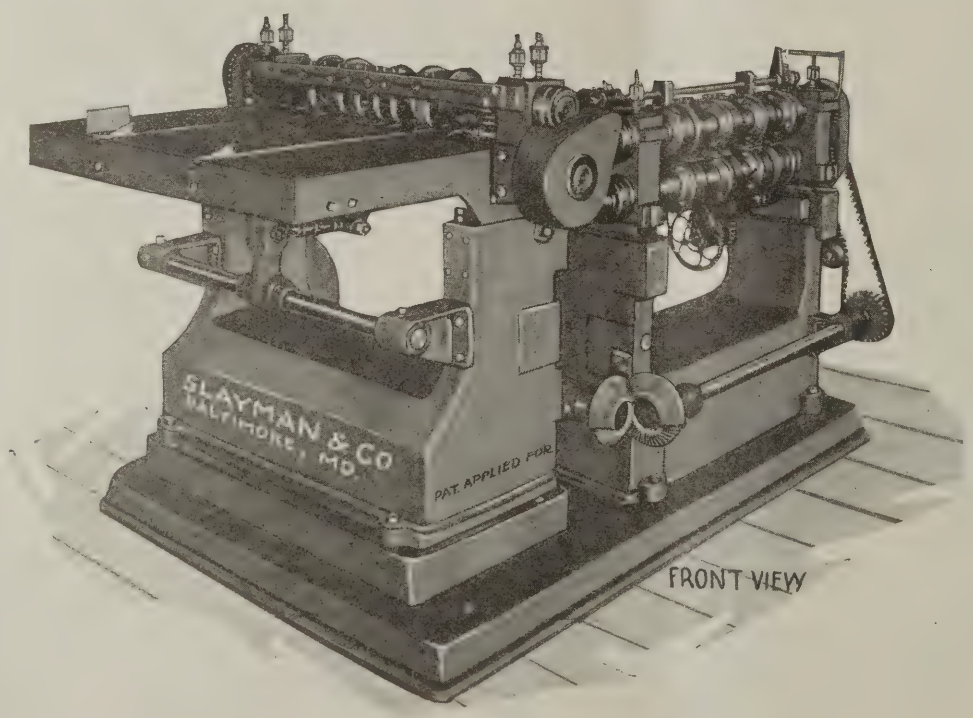
Chicago, Illinois.

the active and intelligent participation by all citizens in meeting the responsibilities of citizenship entailed under the Constitution, both by exercising regularly the right of ballot in selecting the representatives of the people for office and in actively participating in the preliminary processes whereby candidates for office are selected; and

"Whereas, A relatively small proportion of the citizens participate regularly in these preliminary processes of selection, while in the Presidential election of 1920 nearly one-half of the voting population did not meet the responsibility of citizenship even in voting; now, therefore, be it

"Resolved, by the Board of Directors of the Merchants' Association of New York, That the Chamber of Commerce of the United States is hereby invited and requested to call a conference of selected representatives of the various types of organizations which represent the economic and civic life of the Nation for the purpose of giving consideration to this menace to the future of our country—to the end that plans may be formulated and put in operation whereby the citizenship in general may be awakened to a consciousness of its responsibility and may be thereby impelled to meet these responsibilities of citizenship both in the exercise of the ballot and in actively aligning themselves with the political agencies of their choice in making the preliminary selections of candidates for office."

MALAYA MARKETS FOR SARDINES



(By Richard Ford, U. S. Consul at Malaya.)

DURING the past year the exports of canned sardines from the United States increased about 68 per cent over those of the preceding year, the rate of increase being greater than that of any other canned foods. Although complete statistics for the year are not yet available, it appears that the increase was due largely to the demand from Far Eastern markets.

The Bureau of Foreign and Domestic Commerce has recently received a report from Mr. Richard Ford, American Vice Consul at Malaya, which calls attention particularly to the sardine trade situation at Penang, Straits Settlements. He states that official figures of imports of sardines are unavailable, owing to the failure to separate the different kinds of canned fish in the Government reports. One firm, however, has imported 2,300 cases in January and February, and it is estimated that the average monthly imports of American sardines into Penang is about 3,000 cases or more. It is thought that double this amount is received at Singapore.

"In recent months an unprecedented demand has developed throughout Malaya for sardines prepared by American packers. Originally marketed only among the European inhabitants, this type of preserved fish is now being adopted almost universally by the Chinese, and in some cases a fair consumption is in evidence among the Malaya.

SLAYSMAN DUPLEX TRIMMER—SLITTER

Trims the sheet absolutely true, and drops it onto the feed bed of the Slitter where it is cut into the desired sizes—2's 3's 10's etc.

THE TWO OPERATIONS —TRIMMING and SLITTING—IN ONE.

Speed 60 to 90 sheets per minute, depending upon the operator. Saves labor, handling, time, and floor space.

Built on rigid base to stand strain. Guaranteed.

SLAYSMAN & COMPANY 801 E. Pratt St., BALTIMORE, MD.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek **Kewaunee, Wisconsin**

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

"Exact Figures Unavailable—The Government return of imports classes all preserved fish under one head, and for that reason exact figures on sardine importations are not to be had. However, one large import house in Penang received in the last two months 2,300 cases, with heavy shipments under requisition at the present time. Altogether it is estimated that the average shipment of American sardines into the city of Panang each month totals approximately 3,000 to 3,500 cases. It is thought that nearly twice that number are received monthly in Singapore.

"Reasons for This Unusual Demand—The chief reason for this heavy consumption may be ascribed to the increased popularity of this type of food among the Chinese. Heretofore these people in Malaya have depended to a great extent upon dried fish as one of the most important of their foods. But now that a tin of sardines may be had for a few cents, the use of dried fish is growing noticeably smaller, and the more delectable, far more healthful canned variety is in greater demand. The Chinese race is coming to predominate more and more among the several races in Malaya, and, naturally, the volume of sales of a food which has become as universally in demand as have sardines is comparatively large.

"Another demand comes from the large rubber estates and tin mines on the peninsula. As the importance of these two industries increases the communities which spring up in connection therewith grow larger, and inasmuch as supplies of fresh fish and meats are out of the question in a climate as tropical as that of Malaya, large quantities of the prepared variety must be secured. Some of the larger rubber estates on the mainland often requisition several hundred cases of sardines on a single order for supplies.

"Still another, though smaller, demand is found in the small Malay villages which dot both the island of Penang and the mainland of Malaya. The proverbial dried fish which since time immemorial has hung before the small Malay shops has, in many instances, been taken down and replaced with a case of cheap sardines.

"Cheapest Grades Find Heaviest Sale—From the class of buyers it naturally follows that the very cheapest grades of sardines are most readily marketed. Of course, a small quantity of the more expensive brands is disposed of to the European and wealthy Chinese, but by far the bulk of all sales is made with the cheaply packed grades.

"The prices paid for American sardines by Penang importers range from $7.50 to $9.25 Straits currency per case, this price holding, of course, only where large orders are given. Retail prices quoted in Chinese and Malay bazaars range from $9.20 to $9.75 Straits currency per case, or approximately 20 cents (10c gold) per can, a price which makes this type of food available to a vast number of the poorer classes of Chinese and native consumers."

The trend of the American shipments of sardines to the Straits Settlements is shown by the Foodstuffs Division of the Bureau of Foreign and Domestic Commerce, as follows:

1913.....	$ 30.
1918.....	52,603.
1919.....	112,743.
1920.....	420,338.
1921.....	140,497.

Combines advantages of all former silkers

In the Model 7 the good features of all former Silkers have been combined. The rectangular upper screens thoroughly separate pieces of cob from the corn. The square type of drum is a decided advantage over the old round type as the mass is continually being raised, thrown and dropped, preventing the corn from "balling up."

Removes greater percentage of silk

The horizontal wires are spaced so that no corn can pass thru without touching several wires, and they will remove a greater percentage of silk than any other arrangement.

These wires are equipped with a positive semi-automatic cleaning device. A moment's attention periodically keeps the machine clean.

The lower horizontal screens are furnished with smaller perforations when desired, to catch small pieces of cob and husk that may have passed the upper screens. These screens vibrate constantly in opposite directions and complete the job of removing undesirable matter from the corn. All screens are instantly removable. The machine is designed and arranged so that cleaning is a simple matter.

November	299,253	28,603	479,607	36,019
December	240,130	26,532	551,525	49,677
	2,653,813	236,536	6,053,497	503,511

It is believed that the demand for our canned sardines is well established and will continue to grow as it has done in the last few years. The market is of interest, particularly as it affords an outlet for cheaper grades, than are desired outside of the Far East.

The market is comparatively limited, but in the absence of too much competition among American shippers, it is believed that prices can be maintained near the present level.

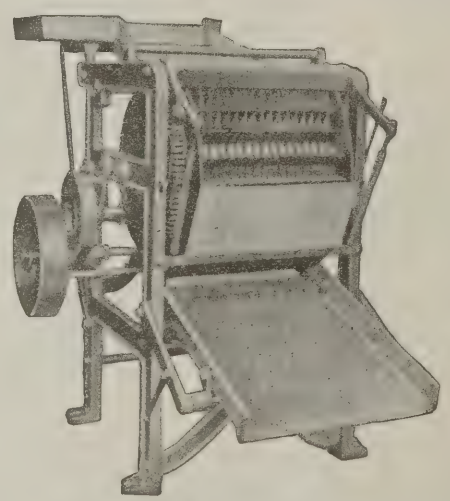
MRS. PIERCE—FOOD SPECIALIST

ANNE PIERCE, for the past eight years director of the New York Tribune Institute, has resigned to act independently as consultant, lecturer and special writer on the merchandising of foods and household appliances, with offices at 30 Fifth avenue, New York City.



Miss Pierce was previously associated with Dr. H. W. Wiley, as assistant editor on Good Housekeeping's Bureau of Food, Sanitation and Health, and was editor of the Bureau of Chemistry, U. S. Department of Agriculture, from 1900 to 1912, during the formative period of the administration of the food law. Her series of talks on "Food for Health and Pleasure," broadcast over W J Z, the past year was extremely well received, and 12 years of editorial and testing work on foods and appliances, interpreting the manufacturer and the woman consumer to each other, and critically studying advertising copy, combined with 12 years' familiarity at close range with the national developments under the food law, constitute a background of experience that should make her services valuable to manufacturers, advertising agencies, women's organizations and publications and others interested, either from the buying or the selling angle, in the merchandising problems of the day.

INTRODUCING AUSTRALIAN FRUIT

American Consul Francis J. Dyer, Coblenz, Germany, May 9, 1924.

The British Army and Navy Stores branch in Coblenz has on sale Australian canned peaches and apricots which replace California fruit that was formerly handled by these stores. The prices of the Australian fruit are 1 shilling 2 pence for peaches and 1 shilling for apricots. This is cheaper than American canned fruit sells for here, the lowest price noticed in local stores being about 30 cents per can for peaches, and this was an exceptionally low price offered in a department store. German canned fruits are still dearer, running up to 75 cents per can, and Hawaiian pineapples sell at about 62 cents per can. The demand is good and the prices do not debar people from buying. The British stores will not accomplish much in the way of introducing Australian fruits, because they are open only to nationals of the allied nations.

LEWIS CUTTER
—FOR—
Beans, Okra, Celery, Rhubarb

Attention, Mr. Canner:-If your cutter does not cut old and stringy beans clean, then you should have a Lewis Cutter, which cuts perfectly.

We also build: Pineapple Peelers, Corers, Sizers and Slicers, Power Can Testers for any size cans, up to 5 gallon Oil Cans.

The Markets

BALTIMORE, JULY 7, 1924

WEEKLY REVIEW

Canners' Crops in All Sections Are in Uncertain Condition—Pea Canning Progressing—Corn Canners Say They Will Be Happy If Two-thirds of a Normal Crop and Pack Result—Black-rot in Tomatoes.

COMING THROUGH—With this week we are starting the publication of direct reports from canners on the crop conditions in their respective sections. Although this crop reporting system is almost as old as The Canning Trade, dating back to the early 80s, it is always new, since it covers the all-important feature upon which the canned foods output necessarily depends. Elsewhere we have asked co-operation in this work, and we repeat here, we would like you to take a hand in this, and to feel that in sending us frequent reports of your crop conditions and prospects, you are helping yourselves, as well as the general industry. No one canner's crop or acreage will make or break the market, but if every canner had a clear idea of crop conditions as they exist with other canners, the whole canned foods market would be improved to an extent that it is difficult to overestimate, because they would then be dealing in certainty, instead of being doubtful and subject to every claim or market maneuver attempted.

It will be seen from these reports that the crop condition is a decidedly uncertain one at this writing. Almost every section of the country has suffered from too much rain, floods, cyclones and other forms of adverse weather which have reduced prospects very materially. And yet the striking thing to our imnd is that they have been able to get such a good proportion of the crops. From the planting of peas, the earliest crop put into the ground, to tomatoes and corn, among the last at least of the staples, the growers have watched every chance and taken advantage of every opportunity to get their fields planted. There can be no interest in a crop that has not been planted, and now the consideration is as to the progress of these acres. Thus far it has not been good. In the East they are finishing their pea packs, and the total is quite satisfactory, both in quality and quantity. They had hoped for more, and expected more, before the weather troubles arrived; but since they feel quite fortunate in coming through as well as they have. The market is so badly in need of canned peas that it has absorbed what supplies have been offered, and is hungry for more. And it will continue to take peas as fast as the canners can deliver them, and always want more. There is no more chance for a surplus in peas, even after the season has been closed, and even if it proves to be a most ideal canning season all during the balance of the pea-packing time, than there is of getting dollar bills for 50 cents. And it would not be a very rash prediction to say the same thing of corn and tomatoes, string beans and some other products, basing the guess upon present crop conditions, and the cleaned-up state of the spot market. When the first snow flies, next fall, and the canners have become almost weary of dumping canned foods into the hungry maw of demand, they will still hear that demand asking for more. This is how it looks today.

TORNADOES, HAIL AND DISEASES—All the country was horrified at the terrible devastation created by the tornado in Northern Ohio, and one can only imagine what such storms do to growing crops; and yet we have had this same thing, on a smaller scale, right here in Harford County, Md., as reported by one of the canners this week. The twister blew the roof of his cannery—and it is not a small one—and badly wrecked his buildings and machinery; lightning struck and destroyed houses and barns, and the driving winds, with hail, leveled the crops that had been planted, and washed out whole areas of farmlands. He must be an incurable optimist who can brush such visitations as these aside and say: "Oh, there will be plenty of crops and good packs." It is the most topsy-turvy year we can recall, and we have been reviewing them for a good many years now.

Early in the season there began to come from the 'Shore reports of unprecedented numbers of parasites of all kinds; that the bugs and insects were eating the crops, and running wild; but we decided to wait more definite information and results before seriously considering this phase of a bad situation. There can be no question of their presence now, and on top of these has come a visitation of black-rot in tomatoes which has "scared the tomato growers stiff." And well it may, because it is fatal, and has gotten so widely spread and done so much damage already that many are plowing up their tomatoes and planting to other crops, in the hope of getting something out of their lands this season.

The "peach killer" used to be an annual joke, but there is no joke about this most recent visitation. The market jugglers are minimizing the trouble rather than magnifying it, a fact you can deduct for yourselves when you read that the Agricultural authorities speak seriously and warningly about this rot. What will it do to the tomato crop, already late and struggling against adverse conditions? No one can tell, but most canners will take no chances with it, they want to sell no more futures, and are worried about the orders now on their books. And they would be most foolish if they tried to discount this danger, and believe that they can get around it and have plenty of tomatoes when the time comes. And considering the prices at which futures are offered, they would be a kind of dunce that we do not know to classify if they took business in the face of these conditions. It is said that only well-sprayed plants have any chance against it, and that means that only Community Plant bed tomatoes have a chance to get through. If that is so, and the agricultural doctors assure us it is, there will be a heavy loss in tomato acreage from this black rot, and a heavy curtailment of the ultimate tomato crop this unfortunate season of 1924. The sentiment in the Tri-States today is not to sell another case of tomatoes, because if the bolt strikes, as it now

seems certain it will, they will be short on the futures already sold.

SUMMARY—Pea canning is ending in this section—generally referred to as the South so far as peas are concerned—and is a fair average pack of very fine quality. Indiana has about finished its pack of peas and will average up quite well. Wisconsin is just beginning and indications are better than early expected, but the danger of scalding hot weather, which would cause the peas to ripen too quickly for proper handling, is the fly in the ointment. New York State also is beginning with fair prospects as to quantity and excellent chance for qaulity if the weather holds favorable. No word from Utah as we go to press, but Utah usually comes through in good style.

Corn has been better planted than we thought possible, though some of the leading corn canning centers, like Illinois, are still busy planting. The crop has suffered badly from too much rain and cool weather. The most hopeful look for only a percentage of their early expectations.

Tomato transplanting is going on as we write, and a great amount of acreage, particularly in the Central West, has had to be replanted, and the growers are having trouble getting a good stand. Black-rot in the East is widespread and doing a great amount of damage. In all sections the weather has not only hampered the setting of the fields, but stunted and killed off the plants, and it is so late now that there is hardly any chance for a normal crop, even if the frosts hold off till very late.

Stringless and string beans have had a hard time of it this spring. The fields are ragged, uneven, with many plants missing, and diseases have been working and spreading, owing to the favorable weather for such. It will take steady, good weather to bring the crop back into shape.

THE MARKET—This has been a very short market week, nearly everywhere the week ending on Thursday afternoon, and so there was not much market to report. It is noticeable that buyers are taking more interest in all canned foods, as the news of crop damage has gotten through to their sensibilities. There are no material changes to record, but the whole list looks stronger and appears due for an advance. Detail prices will be found on their regular pages, and there is no need to repeat here. Interest today is in prospective crops and pack, rather than in market prices, for it would be a foolhardy canner who would sell at today's prices in face of conditions as now known, and the almost certain advance in prices.

ST. LOUIS MARKET

Buying Showing Improvement—Delay in Tomato Deliveries Now Almost Certain Causes Better Demand for Spots—Corn in Same Crop Condition — Many Canners Have Withdrawn All Future Offerings—Fine Quality of Early Delivered Peas—Jobbers Having Trouble Finding Fruits Wanted—Notes of Jobbers in Market.

St. Louis, July 2, 1924.

By "Missourian."

Special Correspondent "The Canning Trade."

THE MARKET—There has been a sustained demand for all spot goods here the past week. This has been caused by the late deliveries from the canning centers on account of backward planting. It has broadened the market for spot stock of both old packs as well as new, and while the buying is not heavy, it is general. Lines which have been more or less neglected have been traded in, and it shows the condition of the supplies in the hands of distributors.

Tomatoes—The lateness of the season for tomatoes has made the possibility of the disposal of spot goods later than usual. Growers in the Tri-States territory say that on account of the late settings, due to too much rain during May and June, the crop will not likely yield the usual amount of tomatoes until late, at least three weeks later than usual. Old packs are in good demand.

Corn—Corn conditions are about the same as tomatoes. Replanting had to be done, and this will make corn for packing purposes late. Growers predict all sorts of calamities and lay everything on the unseasonable weather. They are not offering freely on contract in the South and Middle West, as the crop is late and uncertain. In fact, it is said that many packers have withdrawn from the market until crops are determined. Spot standards are firm and are being substituted for fancy, as there is a scarcity of the latter. Meanwhile there is a good demand for corn.

Peas—While there has been a great deal of rain, it is said the weather has not been too warm. Most pea canners have completely booked up in their anticipated outputs, and if they have a surplus, it will result from a late packing season. Pea packing in the South is being pushed to avoid hot weather, and if this does not come too soon, the quality will be fine. Deliveries thus far show a fine quality. Wisconsin canners will start their operations this first week in July, but they fear hot weather, which will bunch the crop and make for standard quality. Meanwhile spot peas are firm and the supplies are limited.

Fruits—There is an element of doubt in the spot fruit situation. There is a general shortage in the lines that are most wanted, and jobbers have been hunting for their wants. Standard cling peaches are scarce. There is a fair demand for apricots and pears, but not so much for cherries. Offerings of new packs are attracting much attention, and forward buying is increasing. Most of the business is going to well-known packers. Out in California packing conditions are not favorable and short packs in apricots are looked for. There is a good forward demand for pears and more extensive business in pineapples.

Notes—All the leading department stores, as well as the exclusive floor-covering houses, will be closed all day on Saturday, instead of only half a day, the usual custom during the summer months. This with the closing on Friday—Fourth of July—will give the employes a three-day continuous holiday—Friday, Saturday and Sunday.

Scruggs-Vanderwoort-Barney has a special selling of 168 domestic rugs this week; their values were secured through unusual purchasing advantages.

F. Z. Salomon, vice-president of the Famous-Barr Dry Goods Co., has purchased the estate of Samuel Plant, president of the Plant Milling Co., a magnificent omdern home in the West End, with the grounds of six acres surrounding it. It is located near the St. Louis Country Club.

The Grand Leader this week is offering Wilton and Axminster rugs at extreme price reduction.

Trorlicht-Duncker has a sale this week of an exceptional purchase of special patterns in Whittall Anglo Persian rugs, finest quality worsted Wilton rugs made, which enables them to offer many remarkable savings. The page advertisement on Sunday says: "It is an effective demonstration of Trorlicht-Duncker leadership in serving the floor-covering needs of St. Louisians, a service that the firm has been rendering year in and year out since 1863."

CALIFORNIA MARKET

Fruits Bought Well on Opening Prices—Some Prices Thought Too Low—Apricot Growers Asking Too High Prices—A Deadlock Between Apricot Growers and Canners—Trade Finds Pineapple Prices Very Acceptable—Future Tomato Prices—Peach Growers Name Fair Prices—Coast Notes.

San Francisco, July 2, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

THE MARKET—A fair volume of business has been booked on California canned fruits at the opening prices recently announced by most canning interests. These prices were about what were expected and confiramtion of orders have been quite general. Prices on some of the lower grades were under early estimates, and may possibly prove a little embarrassing to some of the smaller operators who sought business at a definite percentage below the opening prices of the larger packers. The demand so far is well scattered through the list, although it is noted by some that Bartlett pears are receiving special attention. Initial business has been heavy enough to warrant extensive purchases of canning stocks and packers are giving this their attention. A steady business out of stock is being done, and a good cleanup is being made, with but a few exceptions.

Apricots—Apricot growers in the counties around San Francisco Bay, where the bulk of this fruit is produced, have been holding their choice canning fruit at $85 a ton, this being for fruit running 12 to the pound or better, and have been asking $75 a ton for fruit running 14 to the pound. Canners consider these prices out of the question and many express the opinion that unless they secure fruit for about $50 a ton, they cannot handle it at a profit. Growers have established a pool of about 20,000 tons, but as far as can be learned no fruit has been sold at the minimum price named by them. Canners have made some purchases at $65 a ton, and the outlook is that they will secure all they need at this figure, or even less. Some members have already broken away from the pool, but others declare they will dry their fruit if they do not secure from canners the price originally set for their holdings. Apricots at $65 would be about the equivalent of 19 cents a pound for the dried product, and this price, of course, is out of the question. Canners realize that the drought is working against large sizes and are disposed to be lenient in grading, planning to accept sizes they would not handle in average seasons. The dry spell has tended to check the inroads of the brown rot and apricots promise to be cleaner and of better color than usual. Last year growers were disappointed with the prices received for their crop, but canners contend that they made no profit on this fruit, despite the comparatively low prices received by them. Some packers voluntarily paid growers an advance of $10 a ton after the season had ended, so that the losses of the latter were not as heavy as was figured at first. Canners feel that in offering $65 a ton for No. 1 fruit and $35 for No. 2, they are giving growers a square deal.

Pineapple—The opening prices named on Hawaiian canned pineapple have proved very acceptable to the trade, and not only have confirmations of orders been general, but re-orders have already commenced to come in. Large buying interests have come through with orders in splendid shape, and pineapple packers are highly pleased with the showing made to date. The outlook is for a heavier pack than for several years, with fruit running to better sizes.

Tomatoes—Under the date of June 23 opening prices were announced on tomatoes by the California Packing Corporation, as follows:

Del Monte Brand Solid Pack Tomatoes—No. 2½, $1.50; No. 2 tall tins, $1.20; No. 1 tall tins, $1.00; No. 10, $4.75.

Tomatoes with Puree from Trimmings—No. 2½, $1.15; No. 2 tall tins, 95c; No. 1 tall tins, 80c; No. 10, $3.50.

Tomato Puree—No. 10 tins, Del Monte Brand, $4.10; No. 10 tins, Winner Brand, $3.35.

Del Monte Brand Tomato Catsup—Half pint bottles, $1.45; pint bottles, $1.95; No. 10 tins, $7.50.

Del Monte Brand Tomato Sauce—Buffet tins, 50c.

Standard Tomato Catsup—No. 10 tins, $6.00.

Peaches—The buying of peaches for canning is in full swing, the prices set by growers having been considered satisfactory by canners in general. These are: Clings, No. 1, 2⅜ inches and up, $45 a ton; No. 2 clings, 2⅛ to 2⅜ inches, $35; Lovell freestones, 2/38 inches and up, $25 a ton, and other freestones $20 a ton.

Coast Notes—Libby, McNeill & Libby have announced opening prices on their general line of fruits which closely follow those of other large interests. Its prices on fruits for salad are: No. 2½s, $3.75; No. 2s, $2.75; No. 1s, $2.20, and No 10s, $12.50.

The pack of apricots in Southern California this season promises to be quite light, owing to unsatisfactory crop conditions and the resulting small size of the fruit. Several canneries will not open for the season, owing to the failure of the peach crop, and the apricots that would ordinarily have been handled by them will be dried.

Quite a heavy demand for loganberries for canning purposes has developed in the San Francisco market. Packers who usually put up most of their pack in Oregon are buying here, owing to the scarcity of berries in the Northwest.

J. D. Leonard and W. H. Matheny, of the Carnation Milk Co., Seattle, Wash., were recent visitors at San Francisco.

A. H. Myer, of San Francisco, a member of the staff of the California Packing Corporation, although 72 years of age, recently won Camp Curry's annual prize waltz at Yosemite Valley for the third consecutive year.

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Baltimore, Md., June 23, 1924—I just returned on Saturday from a swing over the 'Shore, and found conditions about as follows: There seems to be a prolific growth of wheat and weeds. Corn is coming along nicely, and the Delaware fruit is filling well and taking on an attractive hue. Apples, pears and peaches will probably be plentiful. The pea situation is rather unusual. Some canners were about finishing up about the middle of the week, while others less than 15 miles distant were just starting. In the low lands the peas were often rotted out by the excessive rainfall of May and early June; but this was more than compensated for by the luxuriant growth in other patches. On the whole, the pack will be an average one of good quality, and Delaware can once more hold forth as a successful pea-packing State.

The patches of stringless beans were few and far between; most of the plants were small, many having just been set out. One canner reported blossoms on his vines, but even that means a late start.

On Saturday about three-quarters of the tomatoes had been set, and probably all will be out in the field by the end of the present week. In many places cut worms and potato bugs were playing havoc with the plants, while in other sections black rot was making itself manifest. It is difficult to see, in light of all of these reverses, how there can be any August tomatoes for the canners. The crop is very late, and a late crop in ordinary years is a light crop. If tomatoes are to be had at all, it looks as if those canny canners who have not sold low-priced futures might make some money.

Perryman, Md., July 2, 1924—Tomatoes. Crop conditions are bad, too much water. Potato bugs have cleaned up all the early setting; in some patches this has been repeated three times. Some of our growers are just setting plants for the first time, the latest we ever knew. The plants do not look right. Upon close examination we find that about 10 per cent of the plants in our own fields are affected by the black stem rot. This is fatal. On the 25th instant we were visited by a cyclone, which did considerable damage to tomato plants by beating them into the mud and breaking a great many of them entirely off.

This same storm unroofed our canning house and blew down the boiler smokestack and skinning room, damaging the machinery and shafting.

We cannot see a bright spot in the tomato business around this section for the coming pack. It is now about July 4th, and one will have to look very well to see a row of tomato plants across the filed. The situation is about as discouraging as can be.

Munday Point, Va., July 1, 1924—Tomatoes. A short crop in this section. A smaller acreage and because of continuous rains present indications point to a curtailed yield; the fruit is bound to be poor in color and quality.

Jeffersonville, Ind., June 30, 1924—Tomatoes. Only have 75 per cent of acreage out. Will be at least three weeks late. Growing conditions good. Plenty of moisture.

Crothersville, Ind., June 30, 1924—Conditions at this time are good. Late two to three weeks. Rains still preventing proper cultivation. Ninety per cent of last year. Cannot pass an estimate on prospective yield as yet. Our packing season will not start for at least five or six weeks. Must have very favorable season from now on or pack will be far short of normal.

Eureka, Ill., June 30, 1924—Peas. Have operated less than half time the past week because of excessive rains throughout the week and tornado Saturday morning. Sweets are damaged, but will make fair crop.

Corn. Late, cold spring delayed plantings and crop is late and stunted. Probably will have late packing season and light yield.

Fremont, Mich., June 28, 1924—Strawberries are starting to come in, and we hope to have a good crop of quality fruit.

The cherry crop in Michigan will not come up to the early estimates. It was the general opinion that the frosts of a few weeks ago had done no damage, but since having a little warm weather the early prospects for a bumper crop have changed to a prospect of a little less than an average crop.

Downing Gooseberries. Some frost damage to these is apparent. The crop in this section will unquestionably be slightly less than the average.

Alaska Peas. Although our acreage is small, the crop looks fine, and we anticipate a small surplus of fancy No. 1s and No. 2s.

Lima Beans. A good share of the early plantings have been a complete loss.

Marshalltown, Iowa, June 30, 1924—Corn. Condition 60 per cent of normal. Poor stand and continued cool weather. While acreage is large, do not expect full normal pack.

Tomatoes. Stand good, but growth has been at standstill for past two weeks.

Central, Ill., June 30, 1924—Corn. The season is two weeks late. Have not yet finished planting. Corn already planted is ragged stand and very weedy, due to rains keeping us out of the fields. If we could be assured of two-thirds of normal yield, would fell very good about it. Acreage slightly larger than normal. Much danger of frost getting a lot of the corn this fall.

Frederick County, Md., July 1, 1924—Sweet Corn. Planting was at least two weeks late starting on account of cold, rainy weather. A few plots not yet planted this date, while in past years our acreage has all been in ground by June 10th. With favorable growing conditions, corn will all mature at once, and the packing season promises to be a rush, and a short one, unless we have a late fall. Yield as compared with previous years will depend entirely upon growing conditions between now and the middle of September. Have some acreage signed up on last year.

Ladoga, Ind., July 1, 1924—Tomatoes. Tomato crop was out two to three weeks late, but the weather until yesterday is extremely unfavorable for growing. The crop as it stands now is about two weeks late, which will take extremely favorable weather to make average crop.

Corn. The season has been more unfavorable for corn than for tomatoes. We have had so much rainy weather. In lots of fields the weeds are higher than the corn. It looks impossible at this time to put up anything near as much corn as we packed last year. Like tomatoes, it will take extremely favorable weather to bring this corn crop out.

Spot Stocks Canned Foods. Spot stocks of all canned foods are the lowest we have seen in twenty years.

Another pest is announced by the daily papers:

ARMY WORMS CAUSING HAVOC IN MIDDLE WEST

Chicago, July 1—Immense destruction of crops continue in the Mid-West through invasion of the army worn. Ohio, Indiana, Illinois and Iowa are now under attack. Half the counties in Illinois are overrun by the pests.

The heaviest damage in Illinois has been in the northern half of the State, where entire fields of corn and grass have been wiped out within a few hours. In several instances 20 acres of corn and 40 acres of timothy meadow have gone down the throats of the army worms in one night. The fields have been alive with the worms. Squirming, wriggling masses of these pests appear in the fields like magic, forming almost a solid carpet over the ground.

Warnings sent out by W. P. Flint, Urban, Ill., State entomologist, has caused farmers to cease crop culture and fight the worms with poisonous solution and trench digging.

Calcium Cyanide for Chinch-Bug Control.

(*Continued from page 14*)

Table 1: Effectiveness of Various Amounts and Forms of Calcium Cyanide Used Alone in the Furrow as Chinch-Bug Barriers.

Form	Amount used on each rod of barrier	Number of tests	Average time during which 90 per cent of bugs were killed	Variation in time during which 90 per cent bugs were killed
	Lbs.		Hours	Hours
Flakes.....	4	3	8¾	3 to 20
Flakes.....	2	3	8½	1 to 17
Flakes.....	1	18	4	½ to 15
Flakes.....	½	15	1½	½ to 5½
Flakes.....	¼	17	1¼	¼ to 4
Flakes.....	⅛	4	¾	¼ to 1½
Granular...	2	3	4¾	1 to 10
Granular...	1	15	3¼	½ to 17
Granular...	½	12	1¾	½ to 5
Granular...	¼	13	1½	½ to 6
Dust, pure..	4	1	5	.....
Dust, pure..	2	1	5	.....
Dust, pure..	1	13	3½	1 to 5
Dust, pure..	½	11	2½	½ to 6
Dust, pure..	¼	10	1¼	½ to 3
Dust, pure..	⅛	5	¾	½ to 1

On still, damp days on-half to one-fourth pound of flakes, granules or dust of calcium to a rod makes an ideal barrier in a furrow five to seven inches deep. The cyanide should be applied on the furrow bottom at the point farthest from the grain stubble. The bugs are then forced to climb up the steep side of the furrow directly above the cyanide, and as a result their movements are slowed up. Thus they are exposed to the gas for a longer time than when the cyanide is placed in the middle of the furrow or along the side down which they tumble in leaving the stubble.

As may be seen from Table 1, where one-fourth to one-half pound of calcium cyanide per rod was used, it was in some cases effective for as long as six hours. Under such conditions, the cyanide applied at 1.00 o'clock could be depended upon to kill 90 per cent of all the bugs attempting to leave the field during the afternoon. In other cases, the same amount of cyanide applied in the same way and in the same places were effective only for fifteen to thirty minutes; that is, it would be necessary to make three to five applications to maintain an effective barrier during an afternoon.

Used at the rate of one-fourth of a pound per rod, an amount of calcium cyanide sufficient to maintain a barrier a quarter of a mile long would cost $4 a day. This figure is based on a price of 20 cents per pound for the cyanide delivered at the farmer's shipping point. For a fourteen-day migration period, material for a quarter mile of barrier would cost $56. The experiments show that on a number of days two or three times this amount of cyanide would have to be used; therefore one can hardly count on maintaining an effective barrier for the season at less than $70 to $75 for each quarter mile. This is nearly three times the expense of killing the bugs with a combination of creosote and calcium cyanide, or nearly ten times the cost of maintaining a creosote barrier.

Because of the great variation in the results of experiments made to date, definite recommendations

for the use of cyanide alone as a barrier cannot be made at this time. During the past season work similar to that done in Illinois has been carried on in Kansas, Missouri and Indiana. Rather favorable results have been obtained with the barriers in Missouri. The results in Kansas and Indiana compare very closely with those obtained in Illinois. Judging from all the tests made, it may be said that a chinch-bug barrier can be maintained by the use of calcium cyanide alone, but that the expense of maintaining such a barrier is so great as to make it unpractical except for the protection of a very valuable crop, such as seed corn.

Of the different forms of calcium cyanide tried for barrier work, the dust has, on the whole, given the best results, mainly because of its physical character. The small particles afford unstable footing for the bugs when they attempt to cross the line. This retards their movement, and they are exposed to the gas for a considerably longer time than when trying to cross a line of flakes or granules. These coarser forms of the cyanide evolve the gas more slowly than the dust, and do not greatly retard the movements of the bugs. On the other hand, when the soil is very damp, the dust gives off its gas so rapidly that it soon weakens, and does not continue to kill over a very long period. Under such conditions the coarser forms of cyanide are to be preferred.

How to Handle Calcium Cyanide—Caution is necessary in handling calcium cyanide. The gas given off from this material is one of the most deadly known. However, the calcium cyanide used for chinch-bug control is comparatively weak in hydrocyanic acid gas, and if one is careful not to get his head directly over the container, or to breathe in the dust or the fumes of the freshly opened cans, there is little danger. There is apparently very little hazard in handling the material in the open air if one keeps on the windward side of the container. The writers have worked with it for the past two seasons, and have purposely tested the effects upon themselves in a number of different ways. Occasionally when enough of the dust was breathed into the nostrils, particularly when the distributing utensils were being filled from the larger cans in which the material was shipped, a severe headache was caused. This discomfort disappeared after an hour or two in the open air; but one must be careful at all times. Cyanide should not be left in the field or around buildings where children or farm animals might possibly reach it. Fowls that have access to it sometimes pick up the flakes or granules, with fatal results.

WHAT THE BROKERS SAY

Wausau, Wis., June 28, 1924.

One or two factories are making trial runs today or tomorrow. However, very few peas will be packed before the end of next week, or the first of the week following, and a lot of canners will not get started until July 10 to 15; and a few, perhaps, not before July 20.

Unless the improbable happens, and the cool weather continues throughout the summer, this pack will have to be handled in three or four weeks, instead of the ordinary season of six or seven weeks. Taking into consideration the big acreage and present indications for an enormous yield, few canners have the capacity to do this without sacrificing quality. Of course, a lot of things could happen; lice, a few days hot wind, blight, drought, excessive rains, hail, etc., which would curtail production. No doubt, plenty will happen in certain sections, but we do not anticipate that the crop, generally, will be damaged enough to relieve congestion in the factories during the canning season.

Basing our opinion on the foregoing, we are lead to the belief that fancy peas will be scarce, and that prices will advance with the pack. If this proves true, naturally, there will be a larger percentage of the lower grades, possibly both extra standards and standards—we hope no sub-standards—and perhaps lower prices on these grades.

We would like to have you and some of your buyers visit us during the pack. We have the facilities for showing you around. If inconvenient for you to come to Wausau, we will gladly meet you at Milwaukee or any other point you suggest. If you want to make it a vacation—while we can't do much vacationing with you—we can arrange that, too; golf, fishing or anything you want. Just give us a little advance notice please, advising us how many in your party.

GROCERS SUPPLY COMPANY.

Baltimore, Md., June 28th, 1924.

The simple word rain has taken on an ominous aspect in this section of the country. After thirty days of continuous rain, which was much more than was needed, the crops of tomatoes, corn and stringless beans, the Tri-States territory was further deluged three times this week to the misery of the growers and canners alike. At the close of business this week the prices of these three staples are firmer than at any time this season, and in some cases they have been advanced or withdrawn, according to the courage of the canner. Today's quotations are based on a better-than-average yield from the prospective acreage, most of which is yet to be planted or replanted, as the case may be—quite four weeks behind schedule, and a number of things can happen to upset all plans and expectations before the goods are in the cans. We have never seen these crops fail 100 per cent., although dire things were predicted at various times as a result of too much rain and a frost or two, not to mention the bug families and fashionable diseases of the roots and vines, and a famine is not expected this year. Viewed from any angle, however, it appears to be quite safe to buy futures tomatoes, corn and stringless beans at today's prices.

Spot tomatoes continue to be active in carlots and less, particularly the No. 2 cans, to cover requirements during July and August. The visible supply has been largely reduced by the steady drain and there will be no carrry-over, unless some belated holders fail to take advantage of the opportunity to unload. Shipments can be made quickly on hurry-up orders, and some will have prompt attention when received.

The canning of peas is going on merrily, and the quality was never better. Contrary to the usual experience, our canners are securing a high percentage of the smaller sieves, and in consequence, the offerings of No. 4 and No. 5 sieves will likely be more restricted than was expected.

In other spot vegetables, crushed corn was the chief performer this week. The prices of the various grades advanced under active buying and it looks like a firmer market is in the making, if not higher prices. Buy corn now if you have not enough to see you through until September 1st. The demand for stringless beans, string beans, spinach, sauer kraut and the balance of the lines was limited to the usual daily run of orders that filter through at this time of the year. Spot sweet potatoes are about sold out. The prices for future potatoes seem especially attractive. Look them up and you will have no regrets.

There was not much activity in fruits this week, excepting cold processed strawberries, which were fairly active. This item is lightly held and prices are firmer. We can ship quickly new blackberries, gooseberries, cherries, rhubarb, strawberries and piineapples. Pears are nearly sold out. Apples did not attract attention.

There is little doing in cove oysters, herring roe or crushed oyster shells.

THOMAS J. MEEHAN & CO.

DECIDE LEGAL LABELING FOR FRUIT AND PECTIN PRODUCTS.

U. S. Department of Agriculture Press Service.

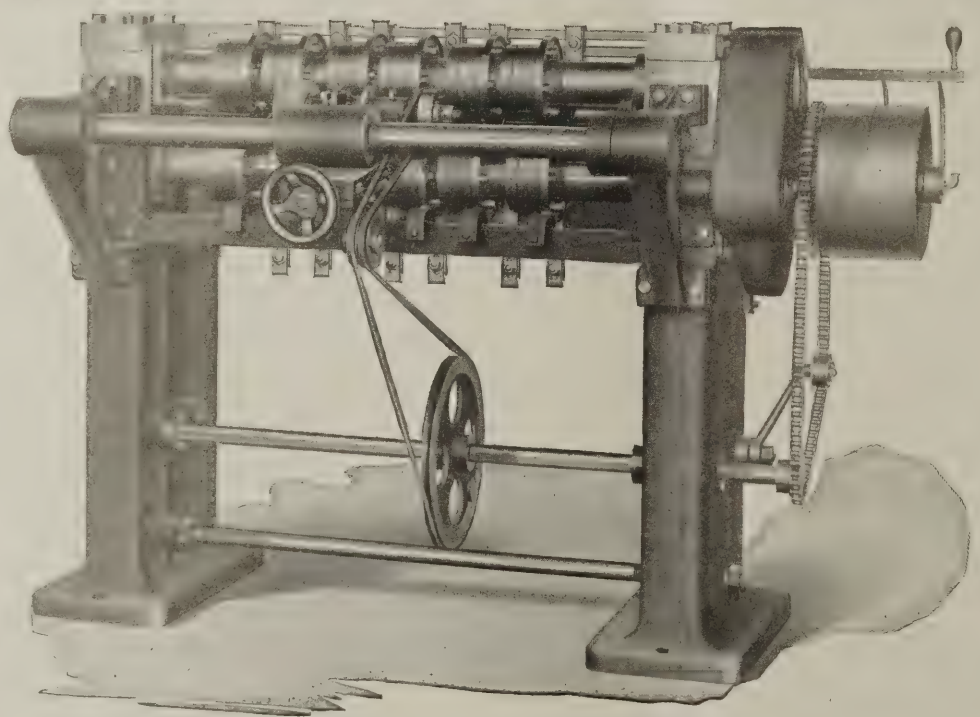
June 27, 1924.

HOW to label fruit products of the general character of preserves and jams in which pectin is used is outlined in a letter just mailed to manufacturers by Dr. C. A. Browne, Acting Chief of the Bureau of Chemistry, United States Department of

Agriculture, which is charged with the enforcement of the Federal Food and Drugs Act.

The text of the letter follows:

The Bureau of Chemistry in the enforcement of the Federal food and drugs act has recently given extensive attention to products of the general character of preserves and jams in which pectin or pectinous solution is used and which contain less fruit and more sugar than is required by the department's definitions and standards for jam and preserve, which define these articles as containing not less than 45 pounds of fruit to each 55 pounds of sugar. A hearing was accorded the trade on this matter on April 16, 1924, and the views of the industry were very thoroughly presented. Every effort has been made to secure additional information on the subject.



These products are not entitled to the unqualified name "Jam" or "Preserve" since they do not conform to the definitions and standards for jam and preserve. No definitions and standard has been formulated for them by the Jonit Committee on Definitions and Standards which origiinates the definitions and standards employed by the department in the enforcement of the food and drugs act. Pending the possible formulation by the committee of a standard for these articles, and without prejudice to such modification of labeling as may be required thereby, the bureau will take no action on the ground of deficiency in fruit against products made from less than 45 but more than 25 pounds of fruit to each 55 pounds of sugar, containing pectin or pectinous solution as a material substitute for fruit and concentrated to the normal consistency of a preserve or jam, if they are designated—"Compound Pectin, Sugar and Strawberry (or other fruit) Preserve (or Jam) Prepared from: ....per cent. Pectin Solution, ...per cent. Sugar and .....per cent. Strawberrry (or other fruit)."

The expression "Compound Pectin, Sugar and Strawberry (or other fruit) Preserve (or Jam)" should be in type of the same size and prominence and on a uniform background. The declaration of percentage composition should follow without intervening descriptive matter and should be made in type of sufficient prominence to be readily legible. The words of this statement should likewise be given in type of uniform size and prominence and on a uniform background.

The words "Pectin" and "Pectin Solution" as used in this label are applicable to pectin solution, dry pectin, apple pomace extract, extract of evaporated apple products, fresh apple extract and any other source of added pectin, and there should be included in the percentage the kettle batch. There will of course be no objection to substituting for the words "Pectin" and "Pectin Solution" the specific name of the ingredent that has been employed, as, for example, "Evaporated Apple Products Extract." The requirements of the Federal food and drugs act governing the labeling of compounds will not be regarded as having been met unless there are inserted in the declaration of ingredients the percentages of pectin solution, sugar and fruit used in preparing the product. The presence of added acid when used either directly or as an ingredient of pectin solution should be clearly declared by a supplementary label statement.

Products of the composition described above, which contain added color, or products containing less than 25 parts of fruit to each 55 parts of sugar, with pectin solution and with or without added color, are regarded as imitation jam or imitation preserves and should be labeled plainly as such with an additional statement of those ingredients, including artificial color, acid and pectin, which give to the articles their imitation character.

No. 2 Slitter with Cutter Grinder Attachment

ACCURATE

Heavily
Constructed
Bronze
Bearing Boxes
Reversible
Cutters
Large Diameter
Shafts

Special arrangement of boxes permits quick removal of either shaft without disturbing the other.

Guaranteed to give eminent satisfaction.

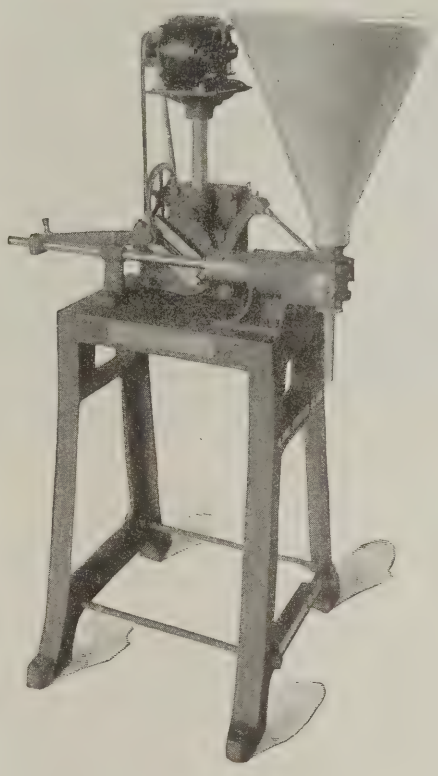
"A Franklin Cane Sugar for every use"

GOLD SEAL TIN PASTE

Reg. U. S Pat. Off.

For Spot Labeling

Gold Seal Tin Paste sticks your labels so that they *cannot be pulled off.* It never gets brittle nor allows the labels to loosen up on the dealer's shelf.



It comes ready for use without mixing, shipped in 5 gal. cans, 30 gal. and 50 gal. barrels.

— Manufactured by —

Dewey & Almy Chemical Co.

CAMBRIDGE, MASS.

Manufacturers of Dewalco Sealing Compounds, Soldering Fluxes, Labeling Gums and Pastes.

Mono - Piston Filling Machine

for Mustard - Salad Dressing, Mayonnaise, etc.

A wonderful little machine that admirably fulfills the need for a satisfactory filler, of moderate price, for the above products.

It fills a solid pack from the bottom up.

Quickly adjusted for different size containers and readily cleaned for different products.

It is a precision filler of minute accuracy and this accuracy is *permanent* regardless of wear.

Made of monel metal.

Write for full details.

The Karl Kiefer Machine Co.

Cincinnati, O.

Are people familiar with your brand?

Goods well displayed are half sold, and actual tests prove that good looking counter displays (silent salesmen) will positively increase sales.

How many brands of Canned Foods are actually called for by name? And isn't it true that crowded shelves confuse the purchaser so that the grocer's suggestions are usually accepted.

Why not let people become familiar with your label and ask for your brand by name? An attractive counter display will bring your can off the shelf down on the counter where it can be seen by everyone entering the store.

We have made a study of this subject and originated some particulary successful displays. May we plan one for you?

The U.S. Printing & Lithograph Co.

CINCINNATI, 80 Beech St.
BROOKLYN, 95 N. Third St. BALTIMORE, 24 W. Covington St.

SMILE AWHILE

THAT'S WHERE IT'S NEEDED

Binks, proprietor of a trucking establishment, advertised that he needed a "good, steady worker," and a diminutive Negro youth showed up. Binks looked him over.

"You don't look very strong," he commented, doubtfully.

"Ah thought yo' said yo' wanted a steady wukkah?" said the youth.

"So I did."

"Den dat's me. Ah's a tight-rope walkah."

FIRED HIM

Hank—My brother sure was a dumb guy.

Frank—How's that?

Hank—Why, they had to burn down the school house to get him out of the first grade.—Sun Dial. —

SURE-FIRE

Flora—Do you think the new show will be a hit?"

Dora—Sure it will. Why, even the leading lady blushes when she rehearses her part.

FORCING THE SUBJECT

He (over the phone)—What time are you expecting me?

She (icily)—I'm not expecting you at all.

He—Then I'll surprise you.—Awgwan.

THE MODERN VERSION

"Hey, Jimmie, why wasn't you at school yest'day? Was you sick?"

"Course I was sick."

"Sick abed?"

"Naw! Sick aschool."

KEEPING TRAINING

Captain on Rifle Range—How in the devil have you made four straight hits? Your range is 100 yards and your sight is set at 600.

Willie Hoppe—See that little stone about half way up there? Well, I'm banking 'em off that.—Froth.

SQUELCHED

"Where are you going,
My pretty miss,"
He asked, "on a day
As bright as this?"
She looked him over;
He heard her say:
"Sir, I am going
The other way." —E. D. K.

REFUSAL IMPOSSIBLE

The Hiwires, circus performers, were at the top of their trapeze, and the Mrs. was holding her husband in midair.

"Now, dear," she said, softly, down to him, "can I have that new gown?"

"I—er—I am not in a position to say, darling," he replied.

TRY THIS ON MANG

Coach—Why didn't you turn out for track practice yesterday?

Lusty Lunged Lew—I had a date, sir.

"Had a date, did you?"

"Yes, sir, but I didn't break training. A miss is as good as a mile, you know."—Flamingo.

HOPES DEFERRED

They were on their honeymoon trip in the mountains, and the bride's mother had insisted on accompanying the otherwise happy couple. Suddenly the groom let out a yell.

"Phyllis! Phyllis!" he shouted. "Your mother has fallen over a cliff!"

"Heavens!" screamed the young woman. "Is she badly hurt?"

"Not yet. She hasn't stopped!"

THE CANNING TRADE

THE JOURNAL of the CANNING and ALLIED INDUSTRIES

EDITORIALS

JOTTINGS—Was ever there a season like this?

* * * *

"Old stuff," you reply, "we have just had the same things happen year in and year out, and they'll keep on happening as long as canners try to 'conserve the surplus of Nature in the days of plenty for the bleak days of want,' or, as Ralph Crary says, 'Caching the summer's surplus for the winter's wants.'" May be so, may be so; but it has seemed to us this spring that old Dame Nature, as she attempted to carry water to the dry places, was mighty unsteady on her feet, and tripped more frequently than we ever saw her do before, spilling whole bucketfuls, in the way of cloud-bursts, in all manner of places.

For instance, on July 8th, as we sat comfortably in a B. & O. R. R. smoker on our way to the neckropolis of the country—for Washington is dead with Congress adjourned—we could not help but note the drenched condition of that kitchen garden of Baltimore, Anne Arundel county; saw the straggling fields of stringless beans, uneven, yellow and washed out; tomato fields which were but half the height they should have been, and in all sizes of the imagination. And though it was raining quietly, as it does most of the time this season, it would seem, we noticed culverts under the roadbed gulching forth veritable torrents of muddy water, like the rapids of Niagara, and suddenly this "flyer" on this Metropolitan branch of the oldest railroad in America slowed down and stopped. And we found ourselves at Montevideo Station, with a raging stream at our right and another at our left, and as we looked up the track for a mile and a half to Jessups, Md., all the tracks were under water, and instead of a railroad we saw a river where there was never a river before, whirling refuse of every kind, including great logs, and tearing out embankments. And there we sat, the trains both ways stalled, for an hour and a half, until the sudden flood subsided. And the occurrence is so common this summer that the daily papers do not even make mention of it.

And so we fell to thinking: Crops more sickly looking than we can ever recall seeing them before at this time of the year, from three weeks to a month late, and not only here, but apparently in almost every heavy cannery crop section of the country; the Shore crying out not only of too much water, but of bugs and black rot. Stocks of old canned foods gone; the biggest Canned Foods Week on record to break forth on the public this November; no carry-over this season; reduced crops and reduced packs inevitable, unless a miracle happens; and yet some canners continue to sell "futures" at close to cost! Evidently they expect this miracle.

Is it any wonder we felt "at sea" with water all around us and such thoughts bothering us for a sensible answer?

* * * *

"No. 3 tomatoes are a thing of the past; the people don't want them, and that's why they are not advancing in price," said one of the oldest canners and operators in these goods the other day. "They are so well cleaned up that they should advance," we replied. "There are enough of them to keep the market going," he answered. "How many cases are there, for they are all here in Maryland?" we asked, and he answered, "Possibly 500,000 cases all told." "Why, it takes a million to a million and a half cases per month to supply the normal market demand, and you have nearly two months before any amount of new tomatoes can be packed," we answered. "Not any more," he answered; "they don't want the No. 3's; they want No. 2's."

If 500,000 cases of spot No. 3 tomatoes represents the total spot supply of that size—and personally we regard that figure as large rather than small—and the market does not advance before new tomatoes can be canned, then all our old-time market "dope" will have to be thrown into the waste basket, and we will have to find a new way to gauge the market. We believe the trouble is that there have been numerous "rumors" about big blocks of No. 3's being held; and that much has been made of these phantom holdings, for in fact they do not exist. If there were a few good bites, instead of the nibbling which the market is doing, there would be a different story to tell, we feel sure. But whoever heard of the market on tomatoes being cleaned down to a bare half-million cases a full

month before new packing time? There may have been rumors, but never before in fact, as it is today.

* * * *

"Tomatoes the unknown quantity," and "tomatoes can perform wonders with a little encouragement from Nature," are two expressions used in our crop reports this week by one of the oldest and most experienced tomato canners on the "Shore." To all of which we say "Amen," but the tomato canners, and particularly of that section, are all too prone to accept in advance the "wonders," and leave no room at all for possible failure. At least, they seem to act that way when selling—they discount everything but a whopping big pack. They sell against that as a certainty. It's all wrong, and they ought to wise up to it. This season, at least.

* * * *

Some of the supply men complain that many of the canners are slow in ordering, waiting, apparently, until the last moment before placing orders for the necessary supplies. This is all wrong, and if they get caught without them they will have no one to blame but themselves. And you bet they won't blame themselves. They'll cuss out the supply man, and they will have no right to do so. The supply men want to have everything in your hands for a good start and no delays. The season is not far off now; get busy and see what you need.

* * * *

Wouldn't it be grand and glorious to have the Cincinnati Convention and big Machinery Show extend over an indefinite period, like the Democratic circus in New York city? It would not!

* * * *

How many canners or others connected with this industry were delegates or alternates at Cleveland and New York? The industry would like to know, and we would be glad to give them the credit and honor due them. Speak up, let's hear from you.

* * * *

Up in Wisconsin there is a merry war on between the various brokerage interests to entertain the visiting jobbers and buyers, inviting them to come to Wisconsin and be driven over the State in the brokers' autos, visiting the canneries while in operation, and be the guests of the brokers. It is a new wrinkle, and our idea of a good holiday would be to have these rich and influential brokers take us as their guests, house us, carry us over the State, hither and yon, in comfortable, high-powered cars, and then, having completed the interesting round of canneries, deposit us on "Thom" Scott's palatial yacht for the etceteras and further entertainment. It is almost tempting enough to make us wish to be a jobber—almost, but not quite.

* * * *

Someone recently said that the trouble with the present times is that there is too much pleasure, too much playing, golfing, etc., and not enough serious-minded business. Well, if there is anything the matter with the times, and we do not admit it, and if anyone wants to be serious-minded in this blistering hot weather, let him go to it. We would like to have that famous book, that once famous jug of wine, and "thou," dear reader, on the shores of a breezy cove, with water lapping at our feet, and the present troubles of the times could go hang—until the cannery whistle blows.

SARDINE PRICES SET AT $10.00 PER HOGSHEAD

By Department of Commerce, Food Division

AN agreement has been made between the sardine canners and the wiermen that $10.00 per hogshead shall be the standard price for fresh herring on the coast of New Brunswick, according to a report just received in the Department of Commerce from the American Consul at St. Stephen, N. B. It will be remembered that as the result of the drastic cut to $6.00 made by the canners, the Dominion Government imposed a tariff of $10.00 per hogshead on fresh herring exported from Canada at a price less than $10.00 per hogshead, and those who sold below the minimum price were held to have violated their contract. The price as now agreed upon is satisfactory to both the wiermen and the canners, and all of the canneries will at once resume operations to the full capacity of the plants.

WILLISON-EARLE CO. SEPARATE

Being owners of 100 per cent of the stock of the Willison-Earle Co. (a corporation), Clarksburg, W. Va., we have mutually agreed to dissolve that corporation as soon as possible, and on and after July 1st, 1924, we will operate separately as follows: The Blair Willison Co., Clarksburg, W. Va., doing a general merchandise brokerage business, and the Guy H. Earle Co., Clarksburg, W. Va., doing a general flour, grain and feed brokerage business.

Attention is called to the fact that for the past 22 years T. Blair Willison has been in active charge of the merchandise department and Guy H. Earle in charge of the flour, grain and feed department of the Willison-Earle Co., and that each are continuing to operate in their respective lines with their same organizations, hence the same efficient service will be rendered as in the past.

Very sincerely yours,

T. BLAIR WILLISON,
GUY H. EARLE.

THE MORRAL CORN HUSKER
either
Single or Double

The fastest and best husker on the market. It has an automatic ear placer that places the ear at the proper place and careless feeders will not waste corn and it will save a great deal of corn over any other husker.

Patented
THE MORRAL CORN CUTTER
either
Single Cut, Double Cut or Split and Cut.

The Morral Corn Cutter is very simple in construction and is the most durable and best cutter on the market. It has a positive feed and will not clog up like other cutters when cutting nubbins and small ears. It is furnished with attachments for cutting Golden Bantum Corn, and it is the best cutter for cutting Bantum Corn.

Patented
THE MORRAL LABELING MACHINE

The Morral Labeling Machine is very simple in construction. It is a very strongly built and durable machine and has great capacity and is guaranteed to do satisfactory work.

It will pay you to write at once for our new catalogue, for prices, list of users and further information.

Common Pests of Field and Garden Crops

By R. H. PETTIT

of the Agricultural Experiment Station Michigan Agricultural College

GRASSHOPPERS.

Melanoplus fumur-rubrum, M. atlanis and Camnula pellucida.

These three species of grasshoppers are always with us. Sometimes only a few are present, but there are enough to multiply quickly whenever weather conditions or the absence of natural enemies produce favorable conditions. Their ability to destroy all sorts of crops is too well known to need comment.

In Northern Michigan we find conditions just suited to their needs, sometimes resulting in infestations of great size, followed by periods marked by almost negligible quantities of the pests. The existence of large areas of "wild land," which has not yet been brought under cultivation, furnishes a suitable place for the hoppers to multiply during the production of a "wave."

The grasshoppers under discussion lay their eggs in the soil, choosing sod land, where it is to be found, and each female may deposit several pods of eggs, each pod containing a score or two of eggs. The eggs hatch out in the spring, and the hoppers live and feed until fall. The number deposited in an acre of "slash" is almost unbelievable. The writer has counted thousands to a square foot of sod.

If the grasshoppers are left to nature, their destruction is certain enough, but too slow to be of much aid to the farmer. Eventually blister-beetles, whose larvae feed in the pods of eggs, will bring them down, and bee-flies (Bombylids) will do their share; also the tiny red mites which are found clinging near the bases of their wings help to weaken the hoppers. Besides these, hair-snakes appear and feed inside the body-cavity, resulting in the death of the grasshopper. In fact, these hair-snakes did very valuable service in destroying grasshoppers* in the recent outbreak in the Upper Peninsula, a teacupful of grasshoppers yielding half a teacupful of the tangled, thread-like hair-snakes. Wild birds, skunks, shrews, turkeys, and even fish feed freely on the pests, but all in all they are too slow to help very greatly during periods of severe infestation.

It is a well-known fact that grasshoppers like salty deposits. A sweet-grimed jumper or sweater is likely to be eaten if left in the harvest field for any length of time, and hoppers will gnaw salty binder twine and fork handles where perspiration has dried.

We, therefore, add a little salt (not too much) to sawdust, poison it, and broadcast it where the pests can find it in their wanderings. In order to make this bait more attractive, we add a little amyl acetate (banana oil) and perhaps a little molasses, both of which pay for themselves in making the bait more effective.

Formula.

1 bushel hardwood sawdust, ¾ to 1 pound salt, 1 pound white arsenic or paris green, or, best of all, 1 pound of arsenite of soda (not arsenate of lead); 3 ounces banana oil (amyl acetate) of a good grade; water to moisten.

Dissolve salt in water. Stir in the arsenic, mix the liquid into the sawdust and add banana oil. Then mix thoroughly. Mix once more, and broadcast around the edge of the farm, making a dead-line. Keep this up, using a bushel or so every day just as the hoppers begin to move, at about ten o'clock in the morning, until the crop is harvested or until the danger is past.

This sawdust bait was developed during the world war to meet special requirements. The bran bait which is now used for cutworms, was formerly used for grasshoppers, and with good success. However, the high cost of bran, oranges, or lemons and molasses almost prohibited the use of the bran bait or "Kansas bait," and, furthermore, poisoned bran seemed to be a menace to poultry and to some wild birds, if used extensively. This danger is minimized when the bait is broken up finely and not allowed to collect in lumps, but experience now seems to prove that one gets more action with a dollar's worth of sawdust bait than with a dollar's worth of anything else. Do not increase the amount of salt, for the hoppers stop eating when they get enough salt. If the bait is too salty, they get through before they get enough poison.

The addition of a pint or more of molasses is believed to add to the attractiveness of the sawdust bait. Arsenite of soda is also known as Kedzie-mixture. Use two quarts to a bushel of fresh, hard-wood sawdust, and if such sawdust is not available, substitute bran.

Blister-Beetles

Old-fashioned potato-beetle (Epicauta vittata).
Ash-gray blister-beetle (Macrobasis unicolor).
Black blister-beetle (Epicauta pennsylvanica).
Margined blister-beetle (Epicauta marginata).

We have in Michigan four different kinds of blister-beetles; viz., the ash-gray, the margined, the black, and the striped or old-fashioned potato-beetle. All of these blister-beetles feed on the beet and on various other plants. They seem to prefer members of the clover family-sweet-clover, vetches, etc.—which they attack during the latter half of July and August. The black species is found on golden-rod in great numbers late in the season.

The blister-beetle in appearance is long, slender, and has graceful legs and form, a little more than half an inch in length. These four species differ markedly in color. The old-fashioned potato-beetle is well known because of its love for that plant. It is striped, yellow and black, with black legs. Those of the black and gray species look very much like the striped one except for the color, and the margined beetle is dead black in color, with the margins of the wing-covers gray. They all eat the foliage of beets when adult and often commit serious depredations.

One word in extenuation before pronouncing sentence of death on these small malefactors. Their larval stages, in all our common species except the steel-blue ones, are passed in devouring the eggs of grasshoppers. In fact, the young blister-beetles of this group are not known

to feed on anything else. The fact that the eggs of grasshoppers are laid in pods covered with water-tight shells, and containing from 20 to 30 eggs, makes it possible for the beetles to do a great deal of damage to the contents of the pods by devouring part of the eggs. If all are not eaten, fermentation and the consequent loss of the rest of the batch is sure to follow. From this we see that it is possible for the bettle to attain its maturity only at the expense of many grasshopper eggs. The beetles, then, are our friends if they occur in anything like moderation, but lest we be overrun by these well-meaning but hungry allies, it is often desirable to get rid of them.

REMEDY:—Before the days of paris-green it was the csutom of our forefathers, when the beetles came in droves, to drive them, by brushing them with the branches of trees, into windrows of dry straw, and then to burn them up. A dusting with arsenate of calcium or a spray of any one of the common arsenicals will dispose of the beetles.

Plant Lice In General

Plant lice are tiny, fragile creatures, with bodies easily crushed. These pests depend on their fecundity to replace the individuals lost by constant inroads made on them by natural enemies and by disease. They are almost incapable of escaping disaster by flight, since their movements are so deliberate; at the same time they are serious pests, since they are immune to all of our ordinary stomach poisons used as sprays. Contact sprays and dusts alone prove adequate, and these are all high-priced. Plant lice suck the juices from plants by means of beaks which penetrate through any surface-coating which may be spread on a plant, and in many instances the making of these feeding punctures is followed by results out of all proportion to the mechanical injury inflicted or to that resulting from the loss of the plant juices. The plant responds just as if some toxin had been injected, leading sometimes to a stimulation of abnormal growth or to a stunting or even to the death of tissue.

Plant lice occur on many plants. Those on most of our garden plants and on shrubs, ornamentals and greenhouse plants may be successfully treated by sprays of nicotine or by dustings with nicotine dusts. Some species are protected by woolly or waxy coats, and these are naturally more resistant to sprays than those having naked bodies. The old spray of kerosene-emulsion is effective enough when used against such woolly species, but it is troublesome to make and is no longer cheap. Nicotine has apparently superseded all the other common sprays, at least in commercial operations.

The standard spray to be used against plant lice living out of doors is 40 per cent nicotine-sulphate, and, with few exceptions, it is the most economical and safe contact spray to use. It does, however, leave a fairly permanent poisonous residue and is not to be used on such plants as lettuce, spinach or anything having an extensive leaf surface where the leaves are to be eaten. In such cases substitute the straight volatile nicotine, which evaporates, leaving no appreciable residue.

For ordinary sprays use one pint of 40 per cent nicotine-sulphate to one hundred gallons of water, with the addition of about four pounds of laundry soap, unless the nicotine is to be combined with lime-sulphur or with some other chemical that is incompatible with soap, in which case omit the soap. Always remember that each louse must be hit to be killed.

Dusts containing nicotine usually, if not always, contain volatile nicotine. As a result, while some dusts liberate the fumes more quickly than do others, the fumes are still similar in all cases. In the case of extensive dusting operations it is often advisable to drag a trailer of lightweight cloth over the plants to help keep the dust from blowing away too quickly and to retain the fumes for a short time.

Leaf Bugs

Capsidae.—Leaf bugs are small and flat, seldom more than one-fourth of an inch in length, which suck the juices from fruit and foliage of all sorts of vegetation. The damage due to leaf bugs cannot be charged wholly to the loss of sap, nor to the mechanical injury caused by puncturing the plant. The damage is usually apparent only in the close vicinity of the puncture, and shows as a small, more or less, regular dead spot in which the cells are killed and appear as if partially digested, so that they shrink down to a very thin layer, often with a raised ring bordering the killed spot, but with the epidermis continuous over the entire lesion. The small areas of killed tissue often appear like pits eaten into the tissue, but under a lens one sees that the skin or epidermis extends down into and across the depression, showing that the cells are not eaten out, but that they are dead and shrunken instead.

The death of the cells would appear to be due to the action of the saliva of the bugs, probably to some digestive enzyme. The lesions are, in many cases, well defined and conspicuous.

Many species are known, of which two are probably the most troublesome in Michigan. One of them is the four-lined leaf bug which multiplies on currants and gooseberries, both wild and cultivated. This creature passes the winter in the egg stage, several eggs being placed in a cluster in a slit cut in a twig. These eggs hatch out in the spring, and the small, bright-red bugs suck their food from the under sides of the leaves, causing the leaves to swell and curl. The bugs dwell in these curled leaves and are hard to reach, but they may be killed if one sprays strongly with nicotine and soap, or with nicotine and bordeaux, shooting upward from beneath so as to wet the undersides of the curled leaves. Later when the bugs acquire wings and change to a bright yellow color, with four black longitudinal lines, they are almost impossible to kill, since they take wing on the slightest alarm.

Unlike the four-lined leaf bug, the tarnished plant bug produces four or five generations a year and passes the winter under rubbish. This species is found everywhere in Michigan, where it injures all sorts of field crops and where it is one cause of "stop-back" or "bastard top" in nursery stock. Partial control may be obtained by means of contact sprays and probably also by the use of nicotine dusts.

The burning of rubbish late in the fall, and the consequent destruction of the pests' winter homes is to be encouraged.

The natural food plant, or rather the first choice for food and the plant chosen in preference to others for the reception of eggs, is said to be horse-weed or mares-tail, Erigeron canadense, a plant which is everywhere common in Northern Michigan. The insect also breeds freely on daisies, golden-rod and wild asters.

Cut-worms

Cut-worms are naked caterpillars which are the larvae of medium-sized, night-flying, winged moths or

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

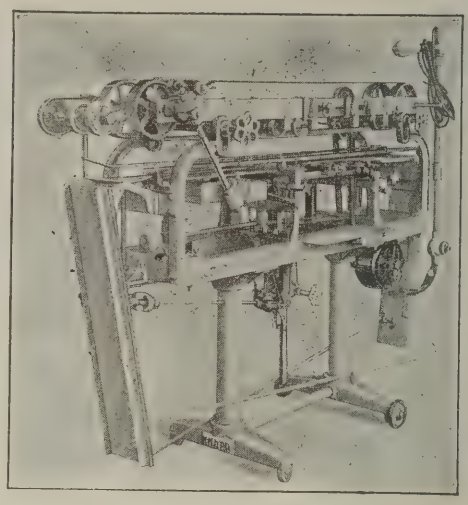
"millers." These larvae or "worms" have a habit of cutting off food and eating it after it is wilted. They normally are produced most plentifully in grass sod, several generations being produced in a season and passing the winter for the most part as partially-grown larvae, ready when spring comes to attack plants just coming up from the ground. Except for climbing cut-worms, which ascend trees and vines and feed on the swelling and opening buds, these pests can be kept from such plants as tomatoes, cabbage, cucumbers and the like by enclosing each plant or hill of plants in a paper barrier, sometimes called a paper collar. It is merely a round collar of stiff paper placed about the plant and projecting into the soil for half an inch. It is effective because the common cut-worms do not readily climb over such barriers.

Paper collars do very well for the protection of tomatoes, cabbage and such plants, but when whole fields of potatoes, corn and the like are to be protected, paper collars are, of course, inadequate. In such cases use may be made of poison bait, usually made with bran as a carrier.

Mix very thoroughly—
20 lbs. bran
½ gallon cheap molasses
A little water
1 lb. of white arsenic (not arsenate of lead) or 1 lb. of paris-green and scent with a small amount of amyl acetate (banana oil) or ethyl acetate (acetic ether) and broadcast.

This is sufficient for an acre or so of land.
It should be put on in the evening in small particles and allowed to lie on the surface.

Fall plowing of grass sod is destructive to cut-worms. For the climbing species use the poison bait, and in addition place a band of tree-tanglefoot or some similar material about the trunk of the tree. In the case of grape vines, the posts and wires must be similarly treated, of course.



The Green Pea-louse
(Illinoia pisi)

The green pea-louse is an insect that is consistently increasing in importance in our northern States, and which is already the cause of severe losses to the pea-canning industry and to growers of garden peas.

Like many other aphids, it feeds on a variety of plants, preferring alfalfa or red clover for winter quarters and migrating to a variety of legumes or other plants for the summer. Each oviparous female is capable of giving birth to a large number of young, the record number being 147.

The average number of young born to each viviparous female is, however, much less, being slightly under seventy, and the number of annual generations at most about twenty.

In the autumn the lice are attracted to clover and alfalfa and possibly in lesser numbers to other legumes as well, and here a quantity of eggs are laid by oviparous females, after mating with males produced simultaneously. The eggs hatch out the following spring, producing viviparous females which multiply at the astounding rate just mentioned.

The NEW KNAPP LABELING MACHINE

The basic principles—the essential component parts of the New Knapp are the same as those used on the present machine.

The new features are the results of a quarter of a century experience growing out of suggestions offered by our many users, after consultation and careful development by our designers.

1. All metal frame -- enameled in gray
2. Increased capacity of labels
3. A simple fool proof motor drive adjusted automatically with carrier
4. Adjustments for sizes by simply turning hand wheel.
5. All adjustment made and controlled from operators side of machine.

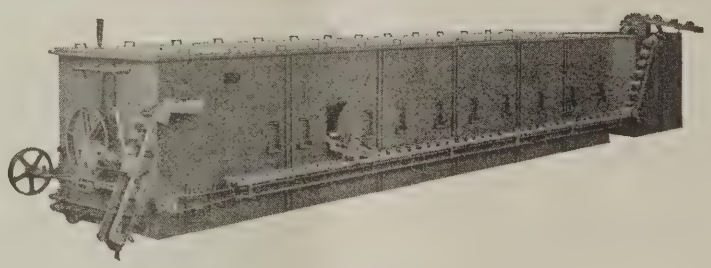
ROBINS ROTARY TOMATO WASHER.

It is not easy to imagine just what would happen if all of these plant-lice lived and reached maturity, the possible number being beyond our comprehension. However, there are a numbr of natural enemies to the lice which more or less completely keep their numbers down. These include syrphus-flies, lady-birds, a fungous disease and several species of tiny wasplike parasitic creatures whose larvae develop inside the bodies of the aphids. These latter parisites are greatly influenced by weather conditions, warm, dry weather being favorable to the parasites, and cool weather being favorable to the plant-lice, merely because the parasites become inactive except in farm weather.



The character of the weather during the opening of spring exerts a very great influence on the magnitude of the pea-louse attack later in the season. When spring begins to make itself felt, the eggs of the plant-lice on clover and alfalfa hatch out, producing viviparous females, which, if unhindered, soon begin to bear young. Multiplication is rapid, and if no parasites interfere, their numbers become noticeable in late May in Michigan.

If the season remains cool and the spring is "late," then a great number of plant-lice are produced. If, on the other hand, the spring opens warm and fairly dry, then the parasites start work almost as soon as the plant-lice, and the plant-lice never have a chance to become plentiful.

The most practical artificial method of killing the pea-aphis at this time is by the use of nicotine, and in this particular case the most effective and practical method of application would appear to be with a power duster. If a spray is used, the nozzles must be so arranged as to reach the undersides of the leaves, and this is almost impossible to accomplish without tearing the vines. The duster, on the other hand, directs a strong current of air downward at an angle with the ground, and this current, which carries the dust, rebounds from the soil, flying upward and coating the under surfaces as well as the upper surfaces of the leaves. To confine the fumes of the free, volatile nicotine still more, it has been found practical to drag a long trailer of lightweight cloth over the dust nozzles and so arranged as to trail for a distance over the tops of the peas. This cloth trailer also serves to assist in preventing the drifting away of the dust, and its consequent loss. The high price of nicotine and of transportation has heretofore kept the price of nicotine dust, of adequate strength, up to a point so that the cost of properly dusting an acre of field canning peas has been about $6. For this reason owners have not felt justified in dusting, except in instances where good, promising stands of peas were threatened with injury likely to amount to more than the cost of dusting. Poor stands, or those not in a vigorous, thrifty condition, were likely to be let alone to produce whatever they might in spite of the aphis.

There has recently appeared a duster which carries, also, the apparatus for mixing. If this proves as great a success as seems likely, the cost of transportation on the inert ingredients of the dust will be largely saved. Unprepared dust can be shipped in sacks or purchased locally, and the nicotine added just prior to its application, thus doing away with the necessity of shipping the

dust in air-tight drums and the consequent freight charges. If this results in lowering the cost of the dust, and consequently the cost of application, very materially, it will prove important progress in the control of this very serious pest.

Bean Maggot

(Pegomya fusciceps)

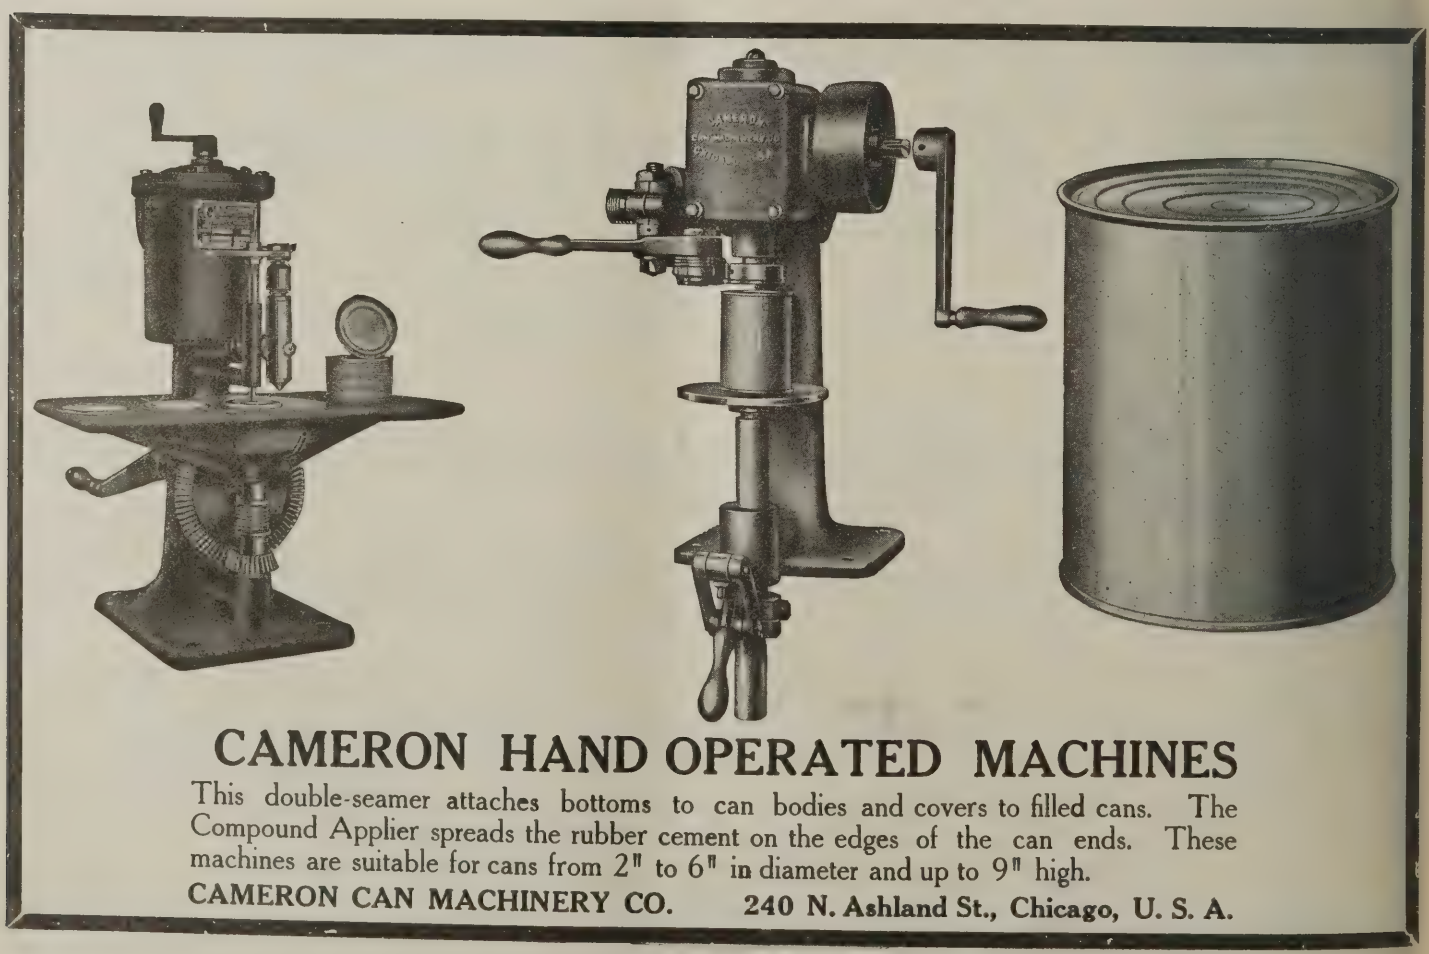
Closely related to the cabbage-maggot and to the onion-maggot is the bean-maggot, sometimes known as the seed-corn maggot. In apearance all three species resemble one another very closely, but in habit differences exist that necessitates entirely different control measures.

In our State the great majority of the bean-maggots pass the winter in the maggot stage in the roots of clovers and in fresh manure. At any rate, they are to be found in clover roots at the time when beans are planted, and quite naturally when beans are put on recently plowed clover sod, the maggots simply move over from the dying clover roots to the fresh-sprouting corn and bean plants. The writer has seen bean plants (deeply planted) fairly riddled by the maggots, even before they appeared above the surface of the soil.

Conditions favorable to the bean-maggot, from the maggot's standpoint, are late plowing (so that the larvae do not have time to pupate before the beans sprout), fresh manure, clover straw on or in the soil, and deep seeding.

Therefore, it is recommended that bean land be plowed early, that it be fertilized with rotted manure, and that the seeding be one-half inch deep, in order that the beans may be enabled to appear above the ground before the tiny bud which is to be found between the colyledons is eaten off. Alfalfa roots are fleshy and serve to nourish the maggots much longer than do those of June clover or of any of the other clovers. Therefore, if alfalfa land is to be used, plow it in the fall. Thistles seem to serve the same purpose, and for this reason it seems advisable to plow land infested with thistles in the fall.

The later generations of maggots seldom, if ever, do much damage to beans, since the bean-roots are less succulent by the time they appear



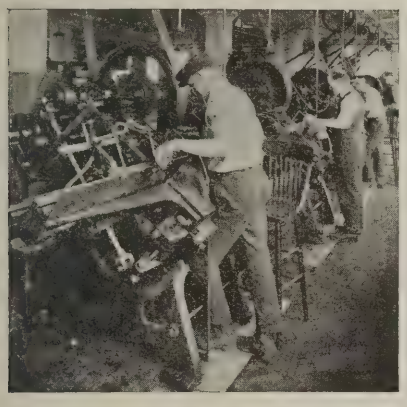
(To Be Continued Next Week)

BRITISH FOREIGN TRADE IN CANNED FOODS

(From Alfred Nutting, Clerk of the American Consulate-General, London, England.)

AS FAR as particulars are available in the British monthly returns of trade, the following details relating to British foreign trade in canned foods during the first three months of 1923 and 1924 have been extracted.

Imports of canned, tinned, etc., beef (including tongues) and extracts and essences (of beef) totaled 240,552 hundredweight during the current period, against 231,811 hundredweight in 1923, the values being £989,490 and £935,345, respectively; similar mutton and lamb products decreased this year to 4,288 hundredweight (£18,736), compared with 7,640 hundredweight (£33,968); while other tinned and canned meats



CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

Chicago, Illinois.

fell to 5,734 hundredweight (£18,878), against 13,758 hundredweight (£128,236), the value, it will be seen, decreasing much more extensively than the quantity.

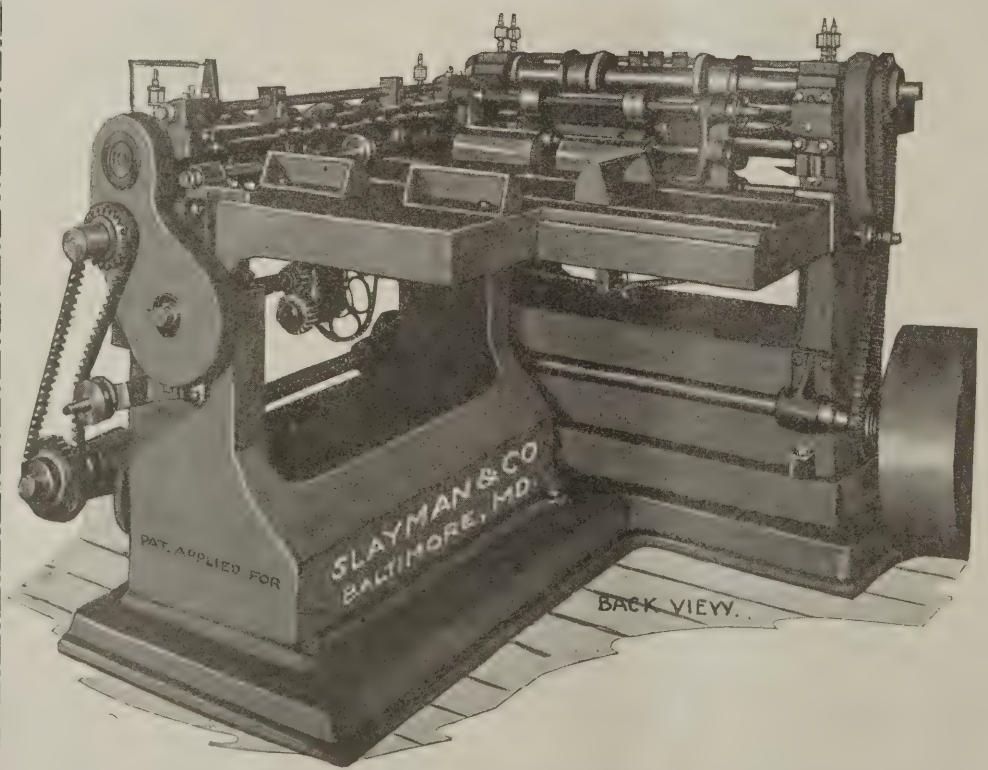
Of sardines there was an increase to 30,998 hundredweight (£160,217) from 22,733 hundredweight (£115,314) a year ago. Canned salmon rose to a marked extent from 62,421 hundredweight last year to 156,063 hundredweight, receipts from all sources showing increases, but the largest advance applied to imports from the United States, as the following statement shows:

Imports of Canned Salmon—

	Cwt. 1923	Cwt. 1924	1923	1924
From United States	41,253	97,976	£196,630	£475,930
From Canada	17,958	32,497	106,718	173,295
From other sources	3,210	25,590	9,638	149,715
	62,421	156,063	£312,986	£798,940

Canned lobsters were received to a smaller extent this year, supplies aggregating 1,377 hundredweight (£19,244), against 3,452 hundredweight (£53,224).

Unsweetened condensed milk decreased somewhat, to 99,550 hundredweight, but rose in value to $310,981 this year, contrasted with 109,615 hundredweight, valued at £299,005, a year ago; while sweetened whole (condensed) milk was slightly lower, at 63,130 hundredweight, compared with 64,326 hundredweight (the value falling by a greater proportion to £199,837 from £223,202); sweetened, separated or skimmed advanced to 352,442 hundredweight, against 330,355 hundredweight; whereas the value of the larger imports was lower at £892,028, contrasted with £894,842.



Pineapples preserved in thin syrup recorded a marked increase this year to 128,480 hundredweight (£260,219) from 88,784 hundredweight (£188,011), while other fruit, preserved in sugar, and jam also advanced, to 373,254 hundredweight from 250,813 hundredweight, while the value fell to $1,065,242 from £1,192,147.

Increase in British Exports—The returns of British exports record increases in almost every description of tinned and canned foods, but the actual extent of such advances is not, in all probability, as large as appears on the surface, inasmuch as the figures of exports during the first three months of 1924 included shipments to the Irish Free State, whereas in the period in 1923 such exports formed part of the domestic trade of the United Kingdom and were not included in foreign trade returns; consequently, this year the totals are higher by so much as was exported to the Irish Free State, and the same conditions apply, of course, to re-exports.

Exports of tinned or canned meats (including tongues) and extracts and essences rose by 50 per cent —from 6,102 hundredweight in 1923 to 9,226 hundredweight—but the value advanced more in proportion, from £75,862 to £128,061.

Unsweetened condensed milk recorded an extensive growth, totaling 6,845 hundredweight in the current period, compared with 368 hundredweight a year ago, and the value increased to £27,995 from £1,484, but the sweetened descriptions declined to 13,616 hun-

SLAYSMAN DUPLEX TRIMMER—SLITTER

Trims the sheet absolutely true, and drops it onto the feed bed of the Slitter where it is cut into the desired sizes—2's 3's 10's etc.

THE TWO OPERATIONS —TRIMMING and SLITTING—IN ONE.

Speed 60 to 90 sheets per minute, depending upon the operator. Saves labor, handling, time, and floor space.

Built on rigid base to stand strain. Guaranteed.

SLAYSMAN & COMPANY 801 E. Pratt St., BALTIMORE, MD.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek **Kewaunee, Wisconsin**

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

dredweight from 37,038 hundredweight, and from £170,784 in value to £51,913.

Exports of fruits, preserved in sugar, advanced to 2,420 hundredweight, against 688 hundredweight, and in value to £12,773 from £4,602, while marmalade, jam and fruit jellies increased to an aggregate of 35,902 hundredweight (£162,453), contrasted with 12,691 hundredweight (£52,397), but 18,584 hundredweight (£88,318) of the increase was due to exports to the Irish Free State.

Re-exports Also Generally Larger—Tinned or canned meats (including tongues) and extracts and essences, re-exported in 1924, rose to 81,418 hundredweight (£247,821), compared with 44,105 hundredweightweight (£133,516) a year ago. Of canned fish, the returns of re-exports were as follows:

Re-exports of Canned Fish—

	Cwt. 1923	Cwt. 1924	1923	1924
Sardines	4,499	8,348	£ 21,939	£ 36,047
Salmon	10,355	13,291	46,510	70,408
Lobsters	1,102	3,283	23,355	53,985
Other sorts	10,425	12,201	83,308	113,545
	26,381	37,123	£175,112	£273,985

Unsweetened condensed milk was somewhat less, totaling 8,594 hundredweight (£26,435), against 9,432 hundredweight (£30,785), but sweetened increased to 1,703 hundredweight (£5,335), compared with 638 hundredweight (£2,592).

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Lowry, Va., July 5, 1924—Continued rains causing black stem rot. Planting two to three weeks late. Looks like 50 per cent crop unless we have some sunshine.

Sharon, Md., July 2, 1924—Corn planting is about three weeks late. Prospects at present are not a bit good. Tomato planting is still in progress. This is also very late.

Gilman, Iowa, July 1, 1924—Corn. Have normal acreage, but have had excessive rains and fields are very grassy. Had the worst storm in years, and crops are badly washed and some are entirely destroyed by hail. Are replanting about 20 per cent. Consider we have about 65 to 70 per cent prospects. Have had a very late spring and corn is very small. Still having very cold weather and corn is making little progress.

Fredonia, N. Y., July 3, 1924—Strawberries. The weather conditions favorable. Crop indicates better yield than for several years and of good quality. Prices back to pre-war values.

The KYLER Boxer

We're Ready to be Judged byWh at Users Say about KYLER Boxers.

See the KYLER Boxer in operation - we sell them by the way they perform in factories like yours. Ask any KYLER Boxer owner anywhere; ask his superintendent, his operator.

Ask any man in a position to know about KYLER Boxers performance. What these users tell you, we will abide by. A pretty fair barometer by which to choose your next Boxer. May we send you more details?

SPRAGUE-SELLS

Sprague-Sells
Corn Cooker Filler
with Peerless Resilker
Attached.

As Standard as the Gold Dollar.

A perfect filler for corn, succotash, etc., at any speed up to 120 cans per minute.

Positive measuring device controls accuracy of filling to within one tenth of an ounce.

Has the only perfect "No Can, No Fill" attachment. The machine does not stop but no corn is discharged when cans are skipped.

Requires little attention and few repairs. Machines which have been in use 15 years or more are still doing perfect work. Can be furnished for filling any size can.

Used by 95% of the quality packers.

Our machines are guaranteed to satisfy you—your money back if they fail to do so.

COOKER-FILLER

This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

Sour Cherries. About half a crop through our section on account of rain and frost during blossoming time, preventing fertilization. Expect prices about the same as with the short yield last year. Around $100 the ton.

Pea packing commenced June 30th. Our acreage about the same as last year and indications for fair yield. Cool weather encourages nice quality this week. We are a week to ten days later than average for last several years.

Beans, corn and tomatoes just getting a good start. Acreage of the latter item not more than one-half compared with several years past.

Frankford, Del., July 1, 1924—Tomatoes. Very poor. Acreage smaller and planting not finished. No planting done at normal time.

Berrien Springs, Mich., July 2, 1924—All crops one to three weeks late on account of weather conditions. Continued cold.

Central Lake, Mich., July 2, 1924—Sweet Corn. Acreage 125 per cent of normal. Season very late; weather continues too cool for good growth. Looks like a very small pack.

Beets about normal. Probably normal pack.

Squash and pumpkin 75 per cent normal acreage. Not much information as to how crop is looking as yet, as everything is two or three weeks later than common.

Felton, Del., July 8, 1924—Tomatoes—Three weeks late and very uneven. 20 per cent less acreage out. Black stem has ravaged 85 per cent of the fields. 60 per cent crop outlook.

String Beans—Much later than last year. Very irregular sowing. In some fields stands are poor and many have been replanted. First deliveries this week.

Kieffer Pears—Crop not nearly so heavy as last year. Too early to determine grade or quality of fruit.

Wyoming, Del., July 8, 1924—Tomatoes—Late backward spring. About 80 per cent of normal acreage living. Some fields badly infected with stem rot. 75 per cent of a crop will be a big estimate.

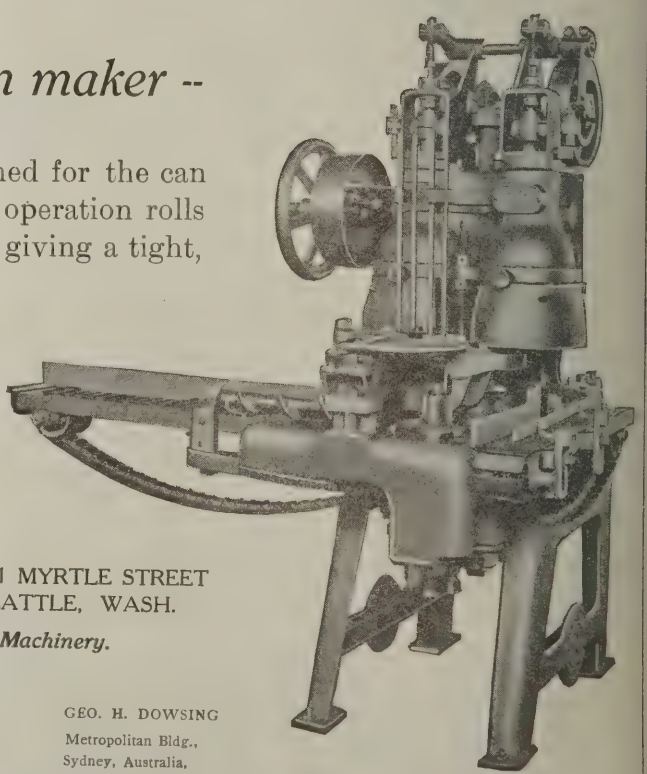
Apples—General condition a little scabby, owing to wet weather. Spraying was not done properly, 85 per cent of crop.

Pears—Condition normal. 95 per cent of crop.

Pickles—Poor stand. Condition fair.

Preston, Md., July 8, 1924—Pea pack over. Very good crop. Strawberries above average.

Corn very late. Some just planted. Will have to have very late fall for any crop.



Tomatoes — "The unknown quantity. Late in planting and black stem in pretty nearly every patch, and in some patches alarming. Many patches plowed up and planted in corn. Others replanting. Yet some very few patches are up to normal, but 75 to 80 per cent are three to four weeks late. If we get 50 per cent of normal in this section, say Carolina and Southern counties, the tomatoes will have to make starting. Tomatoes can perform wonders with a little encouragement from nature.

SLACK SEAMS - HARELIPS -

Two bug-bears of the average can maker --

The TROYER-FOX DOUBLE SEAMER, designed for the can maker, has a yielding pressure on the second operation rolls which compensates for different tin plate thickness, giving a tight, evenly rolled seam all the time.

The two First Operation Rolls tuck the curl of the lid well up under the Flange, with a positive even pressure, spinning, or ironing out the seam in a smooth straight line.

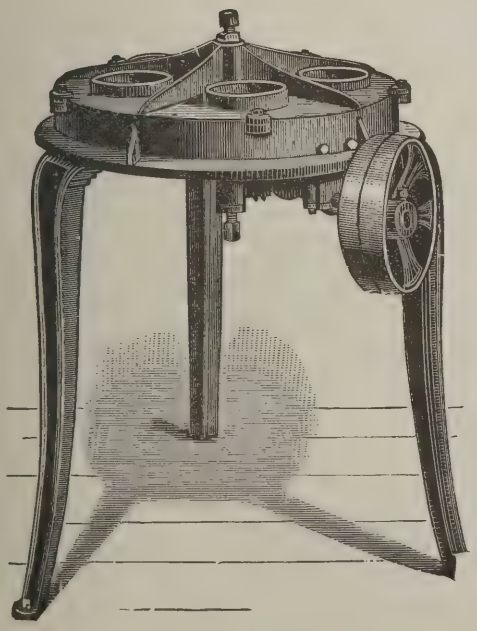
Pea Graders



Manufactured and Sold by

Sinclair-Scott Company

Baltimore, Maryland.

Makers of Nested Pea Graderr, Colossus Pea Graders, and Other Canning Machinery.

Stevenson's Pineapple Slicer.

A machine for the slicing of Pineapples from 3-16 to ¾ of an inch in thickness, and cuts each and every slice even and of the same thickness. It is easily adjusted and is made substantial and durable. It is made either for hand or power. The legs are sufficiently splayed to admit of placing a tub under the machine.

Stevenson & Company, Inc.

601 S. Caroline St

Baltimore, Md.

Aberdeen, Md., July 8, 1924—Corn—Acreage somewhat short. Plantings have been bunched. Prospect poor. Expect 50 to 75 per cent of a crop.

Tomatoes—Acreage very short. Prospect poor.

Lebanon, Ohio, July 7, 1924—Sweet corn is about 60 per cent of normal. Cold weather and rains have delayed planting and cultivating. Some planting is being done at this time. We do not expect to have more than two-thirds of a crop at the best, which will be very late, with danger of frosts this fall.

Keysville, Utah, July 1, 1924—Apricots—70 per cent prospective yield.

Beans—80 per cent. Acreage normal.

Cherries—10 per cent.

Alaska Peas—45 per cent. yield.

Sweets—60 per cent prospective yield. Acreage normal.

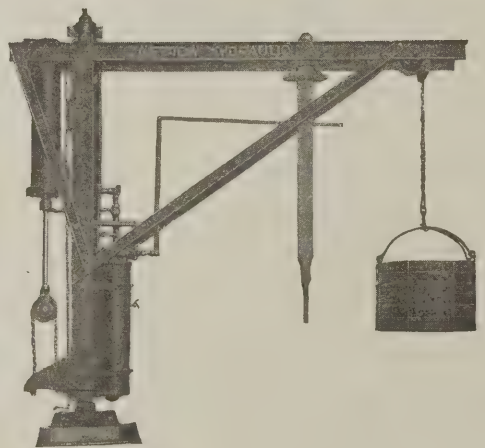
Tomatoes—90 per cent.

ARE CANNED APPLES DOOMED TO DISAPPEAR FROM THE MARKET?

Asks the Modern Merchant and Grocery World.

A good many packers and grocers seem to believe that the canned apple industry is dead and that the time is coming when the public will use fresh apples only. It is certain that the market on canned apples has been completely overcome by a slump, with packers reporting inability to sell their apples even at a price far below cost. The reason is that there are millions of boxes and barrels of fresh apples in cold storage that are selling for $1 per barrel and up, and today a restaurant or pie baker can make pies, apple sauce, etc., from these storage apples at less than half the cost, in most instances, that they can purchase and use canned apples for. Cold storage holdings of apples were 120 per cent above the five-year average for April 1st, and the 5,867,000 boxes exceeded the average by 90 per cent.

A large apple packer recently covered an extensive territory where canned apples formerly had a vogue, and found every baker using fresh apples. Most of them admitted that canned apples would make a lighter and better flavored pie than the storage apples they are now using. However, the difference in cost is so great that most of them will continue to use these storage apples as long as possible.



There is also a big question in the minds of many canners and grocers whether to pack apples that are cut into twelves or into quarters. Some of them rather doubt that there will be a good market for canned sliced apples. There has been some reaction against the canned sliced apple, but this condition is due to the fact that, as this is really the first year the sliced apple has been placed upon the market to any extent, many canners were not prepared to pack such a product and rigged up old makeshift slicing machines to slice their apples, and canned them with the seed cells still in the pieces and with a poor method of processing. Naturally, such a product would not create a demand for more.

HECTIC ACTIVITY.

Zeke—Why don't you paint your cannery?

Luke—Hain't I been lookin' for my paint brush for two year?

VIRGINIA CAN COMPANY

ROANOKE, - VIRGINIA

Never Mind The Mud.

The MONITOR Cylindrical Tomato Washer makes quick work of the worst mud there is.

From the time the stock enters the machine until it is delivered, clean, the water reaches every part of its surface and as it is gently turned over and over, the dirt is loosened and when the water leaves through the perforations, the mud and dirt go with it. The instant it is loosened, it disappears.

Mold spots yield to the action, also. The machine does a perfect job.

You can save money by buying MONITOR machines for 1925 **NOW.**

The Markets

BALTIMORE, JULY 14, 1924

WEEKLY REVIEW

Outlook for All Canners' Crops Most Uncertain—All Indications Seem to Point to Small Packs—Pea Yields Are Small—Corn Outlook Seems Gloomy—The Tomato Crop Situation Reviewed—Changes in Market Prices Are Generally Upward.

THE OUTLOOK—We cannot recall a season when the temptation to say that all crops and packs will most certainly be short was as strong as it is this season. Everything seems to plainly indicate that the crops cannot come through on anything but a small scale. Read over the crop reports in this issue, and we would add that they are all from reputable canners above the pettty nonsense that they can affect the market by reporting poor conditions when conditions are actually good —and you must be an incurable optimist if you can find anything hopeful in them; and we do not know how to classify you if you can see in them, and what you know to be true of conditions, big crops and big packs. No sane man would say, looking at things as they are now, that there will be big crops and big packs during 1924.

Here we are at the middle of July, and that means that it is too late in the season to recoup losses under normal conditions. And yet we are not going to say that the crops and packs may not be good. The season is too erratic for such a venture. We cannot see how they can possibly be good, much less large; but we are not in the business of prophesying, and don't intend to do any. We will look at things as they present themselves, and try to draw conclusions from what we see.

The pea crop and pack are largely in the making as we write. The canneries are all busy, and the reports from them are as varying as even the most jaded market student could wish for, varying from good yields and fine quality to poor yields and poor quality. The overabundance of rain, however, seems to have left the vines so soft and the foliage so abundant that the yield in cases is far below normal. There have been years when peas ran as high as 125 cases to the acre. This season they will not average, it would seem, 50 cases to the acre. Dry and warmer weather would make a considerable change in this, and it can be made very quickly. The heat seems to be on tap, but where are you going to get the dryness? The Eastern pea canners have come through their season with quite fair results. But the amount of this pack is looked down upon by the great pea canners of New York State and Wisconsin as a small, inconsequential thing. It is the "big boys" in the game about whom we speak in relation to the yields, and who are now busy with their one or main crop—peas.

Corn is arousing the sympathy of most men. The corn growers and canners have had the hardest time of their experience to get a crop out and rightly started. The results must hang on what is now in the fields, for it is too late for added acreage of corn. It is bromedic to say that the crop now depends upon the weather we will have until canning time, but how else can one state it? Corn is small, does not look well, and many hills are missing and the fields irregular wherever corn is grown, with the possible exception of Maine, if we take the one good report from that State. And yet Maine had a hard time getting started, as a rule. In this item one would seem to be safe in predicting a small, poor crop, and small pack. But you do the predicting, if you want to.

TOMATOES—The reports speak for themselves, but there is one just in from Uncle "Billy" Silver, of Cost Accounting fame, a man who has grown up amid corn and tomatoes from his earliest days. We quote it just as received:

Aberdeen, Md , July 8, 1924.

The writer has just returned from a trip through the heart of the tomato-growing section of Maryland and Delaware, and gives you herewith a report of the conditions which he found:

On account of the cold, wet season the crop is about three weeks late.

We did not see a normal field for this season of the year on the entire trip. Those fields that had been set out early, the standing plants did not look at all healthy, and a large proportion of the plants are missing.

Cut worms and potato bugs have flourished, and recently the so-called "black rot," or early wilt, has developed, and, we are advised by the Agricultural authorities, extends throughout the whole Tri-States area.

Farmers have replanted, replanted and replanted, four or five times, until all their plants are exhausted, and it is now too late to do more.

A good deal of the contracted acreage will not be planted at all, and some fields have already been plowed up, and others might as well be.

Some reliable canners say they do not expect to pack any tomatoes before September 15th, and this is not an exaggeration.

Conditions are rotten in the growing sections. A short pack is a certainty—how short no one can authoritatively predict, but we feel as a result of this personal investigation that a 50 per cent crop is all that we can expect, and if we should have an early fall, even this percentage would be curtailed.

A word to the wise is sufficient. We have given you conditions as they are.

WILLIAM SILVER.

Uncle "Billy," who is William Silver, guiding genius of William Silver & Co., Inc., Aberdeen, Md., canners, canners' agents and brokers, may be depended upon as giving his honest views of the situation. And as we have also driven around a bit and have seen the fields and observed conditions, we can put the O. K. on what he says about things. He may not need that,

and may not thank us for doing it, but it is just another way of saying "dem's our sentiments."

If there is any market on canned tomatoes it should be the sellers' market, at his own prices, for they are worth anything in reason that he may care to ask for them, either as spots, and we are tempted to say, certainly as futures. Why any man will sell future canned foods in the face of present conditions—and we do not mean just tomatoes, but corn, string beans and most other crops—is beyond our understanding, because they are not getting a future price which warrants the gambling. One man said to us this week: "Well, they sell futures, and then if they don't get them they just pro rate, and there you are." As an explanation, this is about as lame a duck as could be found. What good does this do either the buyer or the seller? The buyer does not get the goods, and with such a canner he has slim chance of collecting damages on short deliveries, and the canner has sold out with no chance to profit from advances in the market, owing to the short deliveries generally, and at prices which return him little or no profit. It is the poorest business in existence.

MARKET CHANGES—The awakening of the jobbers to the serious condition of corn has resulted in better demand, and as a result market prices have advanced here during the week, as follows: Standard shoepeg to $1.20 to $1.25 for country and city quotations; standard crushed, Baltimore $1.05, county $1; extra standard crushed, Baltimore $1.15.

No. 3 sieve peas have advanced from $1.25 to $1.30, with No. 4s at $1.25 and No. 5s at $1.15. Pumpkin is now out of quotation

Sweet potatoes are about all cleaned up, with the exception of some No. 2s in the county, which are held at $1.25.

No. 2 tomatoes have finally reached the stage of official quotation at $1.20, though they have been held at that for some time, and are probably now strongly held at $1.25 if they can be found. We say "probably" because there seems always someone willing to break up the market by letting go some goods just a little under quotations, and much is always made of such a thing. In the tomato market the tail is always bigger than the dog.

Fruits are showing added activity and are advancing in prices for the most part. Blackberries, which are now on the boards, would seem to be the exception, and the eagerness of canners to sell as soon as packed is resulting in a slight decline on No. 10s, which are this week quoted at $7.25, where they were $7.50, and No. 2s at $1.70, where they were $2. California reports very good business in fruits upon the new prices, and that the canners and growers are getting together better on prices.

NEW YORK MARKET

Business Showing Some Improvement—Tomatoes Advancing on Spots and Futures—Salmon Pack Will Be Heavily Cut, According to Salmon Canners—Peas Wanted and Waited For—Fruits Are in Good Demand.

New York, July 10, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

IMPROVING—Business has shown some improvement this week, following the quiet market the previous week, broken up by the double holiday at the week-end. Jobbers were in the market for spot canned foods of practically all descriptions. In addition,, buyers were showing quite a little interest in the future situation.

Salmon Outlook—A well-known Alaska canner, commenting on Government regulations on salmon fishing this year, says: "Up to the present we have refrained from commenting regarding the effect of the new White law upon this season's operations, because we did not care to enter the field of pure speculation. No one knew what regulations the Bureau of Fisheries would promulgate. These have now been announced, and are more drastic than the wildest prognosticator ever imagined. We will not attempt to outline them here—they cover five pages single-space type. However, sufficient to say that a 50 per cent cut in this season's pack as estimated and prepared for is not unreasonable to expect. We are not trying to stampede the trade into a wild scramble to buy. However, we are sufficiently disturbed to withdraw prices. We believe it wise to refrain from selling at prices quoted until a little more is known of the situation and the effect on the market. Some markets have been disturbed by irresponsible quotations from New York and elsewhere. We have refrained from considering these and cut-price offerings from the Coast forced by financial necessity, because we knew drastic regulations were coming which would make these offerings seem like vaporings of a disorganized imagination. Don't let those who have nothing to sell worry you."

Tomatoes—Maryland tomatoes for prompt shipment have advanced, and are generally quoted at $1.17½ to $1.20 per dozen, created by the clean-up of the old pack. Jobbers are now watching the crop situation very closely, inasmuch as canned foods items of most grades and varieties are in short supply, and distributors must gauge their requirements accurately so as to have no surplus of high-cost goods on hand when future deliveries begin in a large way.

Tomatoes—Maryland tomatoes for prompt shipment ahv advanced, and are generally quoted at $1.17½ to $1.20 per dozen f. o. b. factory, for standard 2s. Scattering offerings of 2s a $1.15 were heard of early last week, but it is not believed tha much is obtainable at the low figure. No. 1s were holding firm at 60c per dozen, cannery, with 10s at $4.00 to $4.15. Standard 3s remained unchanged at $1.35, all of these prices being f. o. b cannery.

Future Tomatoes—The market is now more in favor of the seller, and as a result of the uncertain crop outlook, most of the tomato canners in the Tri-States have withdrawn future offerings. Prices quoted by the few who are still offering to book on 100 per cent delivery contracts were reported as follows 1s, 55 to 57½c; 2s, 87½c; 3s, $1.27½; 10s, $4.00 to $4.25, al prices per dozen, f. o. b. country cannery, for standard qualities The usual differential for shipment from Baltimore city canneries was qouted. Many of the packers appear to feel that it is unwise to book further business on 100 per cent delivery contracts until the situation has clarified and they have a more definite line on the quantity of tomatoes which they will have to pack this season.

Tomato Puree—There is a little standard No. 1 puree offering at 55c per dozen, prompt shipment, f. o. b. cannery. The futures market for this size and grade is quoted at 55 to 57½c per dozen, cannery, on guaranteed 100 per cent delivery contracts. A little business is being done.

Standard Corn—Market for cannery shipment has strengthened. Standard is generally held at $1.00 per dozen, f. o. b Southern cannery, for prompt shipment. On futures the market is quoted steady at $1.00 for standards, $1.10 for extra standards and $1.25 for fancy.

Butler & Sergeant, Inc., Retire—Butler & Sergeant, Inc. one of the best-known brokerage concerns in New York City, is retiring from the field. Wm. Hills, Jr., vice-president of the corporation, will continue the business as Wm. Hills, Jr., & Co. and will have associated with him W. C. "Billy" Strum, also a member of the former firm. For the present, at least, the business is to be continued at 139 Franklin Street. Ernest S. Sergeant, who has been president of the Corporation, has extensive business interests in California, including a large brokerage business in San Francisco. Both Mr. Hills and Mr. Strum, who comprise the new firm, are well known in the canned foods trade particularly in the Tri-States. The old firm of Butler & Sergeant, Inc., attained great prominence during the war, when it had many of the leading accounts in this market. It was particularly strong on dried fruits when the export business was at its height, and later became more of a canned foods brokerage concern.

New Pack Pineapple—There has been an increase in interest in new pack Hawaiian pineapple, and it is reported that quite a good volume of business at the opening prices was confirmed during the week. Stocks of pineapple in distributors' hands have cleaned up well, and the trade is beginning to look on this popular item with a little of its old-time confidence.

California Fruits—Several new sets of opening prices on California canned fruits have been issued during the week, and now that the "returns" are about all in, buying has increased on the general line. The spot canned fruit situation is a strong one.

Shrimp Firm—As a result of the announcement of pro rata deliveries on new pack shrimp, the market has strengthened considerably, and there is a good demand coming in from distributors who did not fully cover their requirements earlier in the game.

Sardines Quiet—Buying of Maine sardines has continued quiet, owing to the unsettled conditions of the market, and prices hold quotably unchanged.

Peas—New pack Maryland peas are meeting with an active demand, and jobbers are moving out current arrivals rapidly. Canners are being pressed for immediate shipment of the peas

as soon as packed. Standards are a scarce commodity here, and are wanted in large quantities to fill standing orders which the retailers have been placing during the past few weeks.

ST. LOUIS MARKET

Futures Very Sparingly Offered—Tomato Demand Good and the Market Very Firm—Injury to the Crop in the West Makes Lower Prices Very Unlikely—Corn Promises to Be Short—Peas in Good Demand—Buying More Southern Peas Than Usual—Fruits Are Well Bought—Some Quotations.

St. Louis, July 10, 1924.

By "Missourian."

Special Correspondent "The Canning Trade."

NORMAL—The St. Louis canned foods business is about normal for this time of the year. Definite knowledge as to future packing prospects continues to handicap futures. It is not known how extensive canners will be able to pack, and they continue to be very cautious in offering futures. Early damage caused by rains and cold weather cannot be recouped, according to the belief of the canners, but a more hopeful feeling prevails. The conditions in many sections look more hopeful on account of the improved weather, and while the season is too far backward to change the situation much in respect to deliveries, there is reason to think that things will not be quite as serious as at first believed. The spot movement is lacking in developments. The situation with spot shortages in a majority of leading lines is much to the advantage of the seller.

Canners are withholding on many lines, and distributors, with spot stocks short, will be the sufferers, particularly those who have not covered fully their future requirements.

Tomatoes—Tomatoes are moving in a satisfactory manner. The consumptive demand keeps right up with current buying of jobbers. Firm prices prevail. Future packs are being offered in a small way when offered at all. There seems to be a more general demand for 3s than has been heretofore noted. Tomatoes in the West are backward and the damages resulting from recent storms have been rather serious. It is generally believed by the trade that the buyer who continues to delay the time for making replacements will have to pay in the end in premiums asked for desired grades and sizes.

Corn—Corn continues to show a backward tendency, and there is every likelihood that the pack will be much reduced by the early rains which prevailed early in the season and which in many sections caused frequent replanting. The West and South have suffered more than the East.

Peas—New pack Southern peas are having a good demand in this market because of the improved quality over what was anticipated, and the majority of the Southern packers have sold up most of the standard peas they care to dispose of. In fact, it is said that there has been more liberal buying of Southern peas than has been the case for many years, and all this because of the close cleaning up of the Western. It is understood that the canning of new pack peas has started in Wisconsin this week.

In minor vegetables there is a well-sustained business under way, string and stringless beans, succotash, beets, spinach and asparagus being in a general demand.

Fruits—There has been a big volume of future delivery bookings in California canned fruits, according to the best informed here, and it is said that some of the leading canners in that State are about all sold up on apricots, and it is understood that many of them are only taking orders for other lines subject to their acceptance. It is also understood that the biggest issue affecting California fruits this year is raw materials' cost. Conditions are much improved over last year, and there are no heavy carryover. The stronger market in California and the exhaustion of spot stocks in both the hands of packers and operators has given the real impetus to future trading . Contracts covering assortments of fruit are being made in a more liberal way with favored packers, and it is notable that No. 2 cans are being taken in a larger way this season. Peaches are moving into consumption at a rate that is somewhat surprising for the season. Heavier bookings of standards have been made in anticipation of a continuance of the demand which has favored this grade. Choice and fancy grades, however, have not figured heavily in the future buying. Apricots, pears and cherries are well taken, particularly the first two named. Cherries, however, are likely to be short this season and an advance is looked for on future packs Pineapple has a steady seasonable demand.

According to advices from West Plains, Mo., Koshkonong and Brandsville, the famous twin peach cities of the Southern Missouri Ozarks, are busy with preparations for the coming harvest of the Elberta peach crop, which is expected to open August 5. The Fruit Shippers' Association has estimated that the district will ship 175 carloads.

The Elbertas are in splendid condition, according to Robert M. Hitt, secretary of the Koshkodong-Brandsville Fruit Shippers' Association, who has been going over the orchards, making estimates on the shipments for the Frisco Railroad.

The Elbertas are expected to ripen a little late, due to the backwardness of the season, and this fact, too, is expected to be of advantage to the shippers, as it will put their crop on the market a little later than those from the Arkansas region.

The crop at Pomona and Olden, just north of West Plains, has not been definitely estimated as yet, but it is likely that from ten to twelve carloads will be shipped from these two stations.

A tour of the grape-growing regions of the Missouri and Arkansas Ozarks will be made by grape growers of these regions beginning at Joplin, July 22, under the auspices of the Frisco Agricultural Department, the Welch Grape Juice Co. and the universities of Missouri and Arkansas, it was announced last Saturday by D. E. Eicher, of Springfield, horticultural head for the Frisco.

CALIFORNIA MARKET

Steady Business in Fruits—Asparagus Canning Ends With Fair-sized Pack—Tuna Prices—Apricot Canning Not Up to Average—Good Crop of Bartletts in Sight—Coast Notes.

San Francisco, July 10, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

FRUITS—A steady business is being done on California fruits of the new season's pack, although there has been no marked rush to place orders on any particular variety. There have been seasons when earlier orders were much heavier, but the volue of business booked to date has not been disappointing, since retailers and wholesalers in all lines have adopted the policy of going slow on future orders. The orders received so far have been quite satisfactory from the standpoint of assort-

ment, although some packers have had to refuse a few orders which ran too freely to Bartlett pears. Standard clingstone peaches seem to be in special favor, and the outlook is that this grade will be very strongly featured this year. It is also noted that there is a marked demand for fruits in general in No. 2 cans.

Asparagus—Asparagus packing came to an end in most plants on the last day of June, although a few small canneries ran a week longer to clean up offerings. July 1 is generally recognized as being the official closing date on this vegetable, and shipments to the markets are negligible after this time. Unfavorable weather conditions reduced the size of the pack materially from early estimates, but despit this it is anticipated that the output will prove in the neighborhood of 1,800,000 cases. Considerable asparagus that would have been shipped out of the State was diverted to canneries, owing to the restrictions on shipments resulting from the hoof-and-mouth epidemic among cattle.

Tuna—The Van Camp Sea Food Co., of Los Angeles, Cal., has named opening prices on tuna, as follows:

Bluefin and Yellowfin—½s, $7 00; 1s, $13.00.
Striped Tuna—½s, $6.00; 1s, $11.00.
Albacore Tuna—¼s, $6.25; ½s, $10.00; 1s, $19 00.
White Star Tuna—¼s, $4.80; ½s, $7.80; 1s, $14.00.

These prices are considered low, in view of packing costs and the demands of fishermen, and an advance at an early date would occasion no surprise.

Apricots—The packing of apricots has come to an end in the San Joaquin Valley territory, and will shortly open up in the vicinity of San Francisco Bay, where the crop is about a month later in maturing. The cannery at Armona, Cal., made a pack this season of bout 30,000 cases, it is reported, as compared with 50,000 cases last year, but growers have profited more this year, despite the decreased output. Last year the top price was $25 a ton, but this year canners paid $50 a ton for No. 1 fruit and $30 for No. 2. Some growers in Alameda and Santa Clara counties are still demanding $85 a ton No. 1 canning apricots, but canners are getting many contracts at $65, and it is not believed that more than this will be paid for any fruit, no matter how fine quality it may be. Should growers go ahead and dry their fruit, as they have threatened to do, it is doubtful if they can get more than half out of their crops than canners are offering.

Peas—The Bartlett pear crop of Yolo county, Cal., promises to be a splendid one, its condition being better than that of any other crop. A large part of the crop has already been sold to canners and to green fruit shippers, the intention being to dry as little as possible.

Coast Notes—O. Jaeger, a sardine packer, of Stavanger, Norway, was a recent visitor at San Francisco and spent some time with his representative in this territory, Eugene M. O'Neill. He was also entertained while here by K. Hovden, a sardine packer, of Monterey, Cal., who was formerly in business in Norway. "The United States has always been the principal customer for Norwegian exporters," said Mr. Jaeger. "We did a very large business before the war. Due to obvious reasons, such as lack of transportation, the market was cut off overnight. When the war was over prohibition made further inroads against the establishment of the former trade, but today the situation is returning to normalcy. Business conditions in Norway were hard hit by the slump in business here in 1920, but with prosperity having returned, a reflex in the situation is being felt in Norway." Mr. Jaeger wishes it understood that he lays no claim to being the Sardine King of the world, as he has so often been called. He even denies that he is a Sardine Crown Prince of a Sardine King. "Almost every time I am interviewed," he went on, "I am dubbed 'The Sardine King.' Why, I own but one little packing house out of more than two hundred in Norway. Of course, I have no objection to my sardines being called the King of Sardines, because I am very proud of them."

The San Francisco trade recently enjoyed a visit from T. J. O'Byrne, a prominent broker, of Chicago.

Considerable of the loganberry crop in Oregon has been packed this year on a co-operative basis, growers having made arrangements with several canners to handle the crop in this manner.

The domestic sales office of the Fred B. Neuhoff Co., of Los Angeles, has been transferred to San Francisco, owing to the light pack of fruit that will be made in the southern part of the State this season.

Arrangements have been made by the American Packing Co., Everett, Wash., for handling fruits and vegetables this year, in addition to salmon, on which the plant has formerly operated exclusively.

James D. Dole, president of the Hawaiian Pineapple Co., Ltd., of Honolulu, sailed from San Francisco for the Hawaiian Islands July 2, following a stay of several weeks on the mainland.

MAINE MARKET

Seasonable Weather—Been Too Hot and Too Dry—Peas Making Good Progress—Corn the Least Favored—Sardine Factories Not Running Full Time.

Portland, Me., July 11, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

SEASONABLE WEATHER—At last we are enjoying seasonably warm weather, and corn should come along fast. The past six weeks, however, have been very, very dry, and all crops are at a standstill, hardly holding their own against the heat.

Peas are coming along rather better than other vegetables. Judging from the lateness of the market garden peas, about ten days behind schedule, it is a safe bet that canning operations will be a bit tardy. Factories are in readiness and hope to begin within two weeks at latest.

Stringless beans also come to the factory the latter part of this month. Sales this year were big, and the acreage increased accordingly, but this continued bad weather again threatens a short delivery. Some sections have enjoyed local showers and are showing a fair yield, while others have held dry and are suffering in consequence.

Corn is under a greater handicap than any of the other crops, getting a bad start at planting and showing very little progress during the past fortnight. Regular rains and continued warmth for a month can only save a real failure of the corn yield, and if the weather continues unpropitious, there will be little corn packed in Maine this season.

The sardine situation has not improved with the advance of the season. Many factories have not begun operations, and none is working to capacity. As more shops open up, it is anticipated that pack and sales will become regulated, and no doubt an advance made in price.

F. J. Tyler, of Bethel, operating canneries there and at Fryeburg, lost his shook factory by fire last week, with a loss of about $12,000. Mr. Tyler is well known around Baltimore, having for several years been connected with the Wm. Silver Co.

WHAT THE BROKERS SAY

Aberdeen, Md., July 9, 1924.

Tomatoes—The market students are puzzled for an explanation as to why spot No 3 tomatoes have not been in better demand since the first of the year. We have witnessed 2s advanced from 90c to $1.20 per dozen, while 3s have not moved a peg, the market being $1.35a$1.40, the same as it was last January. This situation is without precedent. Considering their intrinsic value, 3s at $1 35 are cheaper than 2s even at $1.00. However, 3s have not gone out of fashion, and they will have their innings later.

The market on future tomatoes is firmer, and most packers have withdrawn prices until the season is further advanced and they can get a better line on the crop conditions. Owing to the lateness of the season, there will be very few tomatoes packed before September 1st. The market is nominally 57½c for 1s, 90c for 2s, $1.30 for 3s, and $4.00a$4 25 on 10s, f. o. b. respective shipping points for shipment when packed.

Corn—Spot corn is pretty well cleaned up. The situation on future corn is about the same as it is on tomatoes, most packers having withdrawn prices. We can probably fill orders at $1.20 for standard shoepeg, $1.30 for extra standard shoepeg, and $1.40 for fancy shoepeg, f. o. b. Maryland factory. Crushed sugar

:orn we can buy at 90a95c for standard quality.

Sweet Potatoes—The spot sweet potatoes are all cleaned up. We can buy new pack for shipment when packed at $1.25a$1.35 for 3s, according to quality. C. W. BAKER & SONS.

Wausau, Wis., July 5, 1924.

Outside of an occasional small acreage of peas having been damaged by hail, nothing has occurred during the past week to injure the pea crop. The weather has been freakish. In driving a hundred miles one is liable to run through half a dozen thunder showers. They only last a few minutes, and cover a very small area. One locality had four hail storms in one day, with no panied with a very severe hail storm, but the area covered was serious damage. Down-State they had a young tornado, accomlimited, and the damage to the pea crop comparatively small.

It still continues very cool. The temperature gets down in the forties nearly every night; in fact, frost was reported in some sections Wednesday night. This is all to the good. If the improbable happens, and we have no hot weather, Wisconsin will have a wonderful pack. However, a few hot days will doubtless tax the capacity of many of the canners, resulting in quantity rather than quality. Here is hoping for continued cool weather.

Probably twenty canners have got started, in a small way, during the past week. Next week 75 per cent of them will get going. The remainder will not get started until the week following. The week beginning July 14 will probably be the big week. GROCERS SUPPLY CO.

What Canned Foods Distributors are Doing

Harvard University Bureau of Business Research Analyzes Jobbers' Costs and Profits Figures For 1923—National Announces Committee Appointments. Notes of the Jobbing Trade.

JOBBERS' COSTS AND PROFITS—Some interesting figures on wholesale grocers' costs of doing business are contained in the report of the Harvard Bureau of Business Research, analyzing actual figures from 498 wholesale grocers from every State in the Union, covering 1923 business. The report, which is self-explanatory, is as follows:

Operating Expenses, Gross Margin and Net Profit in 1923 for Wholesale Grocery Firms According to Rate of Stock-Turn—Net Sales, 100 Per Cent.

	Stock-turn less than 4.5 times	4.5-6.9 times	7.0 times and over
Number of firms	84	264	150
Total sales force expense	3.0%	2.6%	2.3%
Wages of Receiving and Shipping force	1.3	1.2	1.0
Total executive & office salaries	1.9	2.0	1.8
Rent	0.5	0.5	0.5
Total interest	2.0	1.5	1.2
Total expense	11.7	10.7	9.9
Gross margin	11.7	11.4	10.9
Net profit	0.0	0.7	1.0

As may be observed from the table above, the common figure for the total expense of wholesale grocers who turned their stock less than 4.5 times in 1923 was 11.7% of net sales as compared with a common figure of 9.9% for the firms that turned their stock 7 times or more. The major items of expense, with the exception of total executive and office salaries and rent, were lowest on the average for the firms that turned their stock 7 times or more in 1923 and highest for those whose rate of stock-turn was less than 4.5 times a year.

These results further substantiate the conclusion drawn by the Bureau in the past that a high rate of stock-turn ordinarily is an indication that successful methods of business management are in use. Not only do firms with a high rate of stock-turn commonly have lower average figures for total interest expense and some other fixed charges, but it also appears that these firms are able to utilize both their sales-force and their receiving and shipping-force more effectively than the firms whose rate of stock-turn is relatively slow.

Heads Canadian Grocers—Fred T. Smye, of Hamilton, has been elected president of the Canadian Wholesale Grocers' Association for 1924. Other officers elected at the convention last week were as follows: Z. Hebert, Montreal, first vice-president; C. P. Wood, Halifax, second vice-president; A. O. Marrin, Winnipeg, third vice-president; Thomas Kinnear, Toronto, treasurer, and A. C. Pyke, of Toronto, re-elected secretary.

National Names Committees—J. W. Morey, president of the National Wholesale Grocers' Association, has announced the appointment of chairmen of standing committees for the current year. The appointments are as follows: Pure Food and Legislative, W. A. Hannigan, Wilmington, Del.; Federal Trade Commission, Ezra Warner, Chicago, Ill.; Foreign Trade Relations, F. T. Fischer, Seattle, Wash.; Postal Service, Thomas J. Maraden, of Michigan; Metric System, Campbell Holton, of Illinois; Canners' Conference, Arthur P. Williams, New York City; Canned Foods Week, Lester Lieber, St. Louis, Mo.; United States Chamber of Commerce, Guy W. Rouse, of Michigan; Economy Conference, E. F. Brewster, Syracuse, N. Y.; Contracts, Tom W. Balfe, Chicago, Ill.; Discount for Cash, J. W. Herscher, Charleston, W. Va.; General Education, B. F. Persons, of Indiana; Sales Promotion, J. J. Miller, of Illinois; Publicity, Fred C. Letts, of Chicago, Ill.; Outbound Delivery Costs, J. D. Houston, Pittsburgh, Pa.; Jobbers' Efficiency, Arjay Davies, Easton, Pa.; Fire Prevention, George C. Buell, of New York; Railroad Service, M. W. Griggs, of Minnesota; Containers, A. E. Ayres, of South Dakota; Ways and Means,, S. L. Stix, New York City; Resolutions, W. C. McConaugher, West Virginia; Membership, Roy L. Davidson, of Indiana; Arbitration, Austil L. Baker, Boston, Mass.; Advisory, Theodore F. Whitmarsh, New York City.

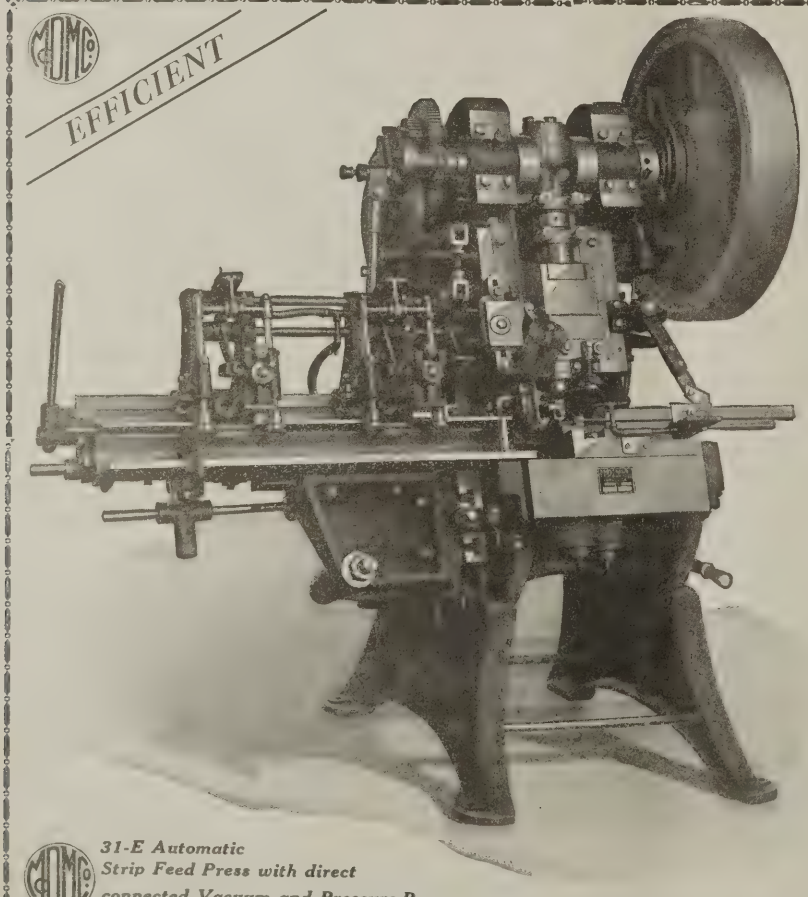
Swindling on Del Monte Reputation—The California Packing Corporation has issued a bulletin to the grocery trade, warning of the activities of a group of swindlers trafficking on the Del Monte reputation. The latest operations of these swindlers were in Indianapolis. According to the Corporation's warning circular, representatives of the "Pacific Exploitation Co." are calling on retail grocers, presenting them with a fountain pen of little value, "with the compliments of the manufacturers of Del Monte goods," after which the retail grocer is invited to purchase memberships, varying in price from $1 to $10, these memberships purporting to entitle the retail grocers to purchase from a special Del Monte exhibition car Del Monte products at prices much below jobbers' quotations. The California Packing Corporation has asked grocers to watch out for the operations of these men and to notify the Corporation of their appearance in any town or city so that the proper steps may be taken to prosecute them for their fraud.

Approve of John W. Morey—J. W. Morey newly elected president of the National Wholesale Grocers' Association, is popular with the trade in his home State. Commenting on his election, the "Merchants' Index," of Denver, the publication of the Colorado State Retailers' Association, says: "The independent retailer is assured a square deal under his leadership, as he always has been a staunch supporter of the independent retailer, and this is shown in the policy of his institution. This is further shown in the statement made upon his return from the convention: 'I am intensely concerned in the matter of creating a closer co-operation between the jobber and the retailer in the matter of food distribution.'" Mr. Morey is president of the Morey Mercantile Co., of Denver.

Canned Foods Month—C. W. Linthicum, secretary of the Arkansas Wholesale Grocers' Association, in a bulletin to members, says: "It has been suggested that Canned Foods Week be made Canned Foods Month this year. We certainly do agree with the idea. A week is not long enough. We hardly get steam up good for a good drive on Canned Foods Week until it is over.

So by all means let it be made for a month instead of a week."

Settling for Swells—Ross P. Seaton, secretary of the Illinois Wholesale Grocers' Association, discussing the question of swells adjustment, reminds members: "Buyers are getting busy at this time with the swells from 1923 pack of canned foods, checking up and going through their stocks and purchases of swells in the stocks of their customers. It has been suggested by one of the buyers of canned foods that this is a good time to take up with your canning friends the proposition of an allowance to be deducted from the invoices. This is in accordance with the suggested contract and allowance made by the National Canners' Association and the National Wholesale Grocers' Association in the past winter. Buyers should not overlook inserting the clause 'in lieu of normal swells.'"



Turnover and Volume—Proper turnover is more important than mere volume, says the Alabama Wholesale Grocers' Association, citing figures compiled by the Harvard Bureau of Business Research in substantiation of their claim.

Canned Foods Week—Wholesale grocers and chain store distributors are making plans for co-operation with the canners of the country in the staging of Canned Foods Week, which will be he'd November 8 to 15, inclusive. The National Wholesale Grocers' Association committee planning for the event is headed by Leslie Lieber, of Haas-Lieber Grocery Co., of St. Louis, while T. G. Perfect, of the Huntington, Ind., Grocery Co., is chairman of the Canned Foods Week committee of the American Wholesale Grocers' Association.

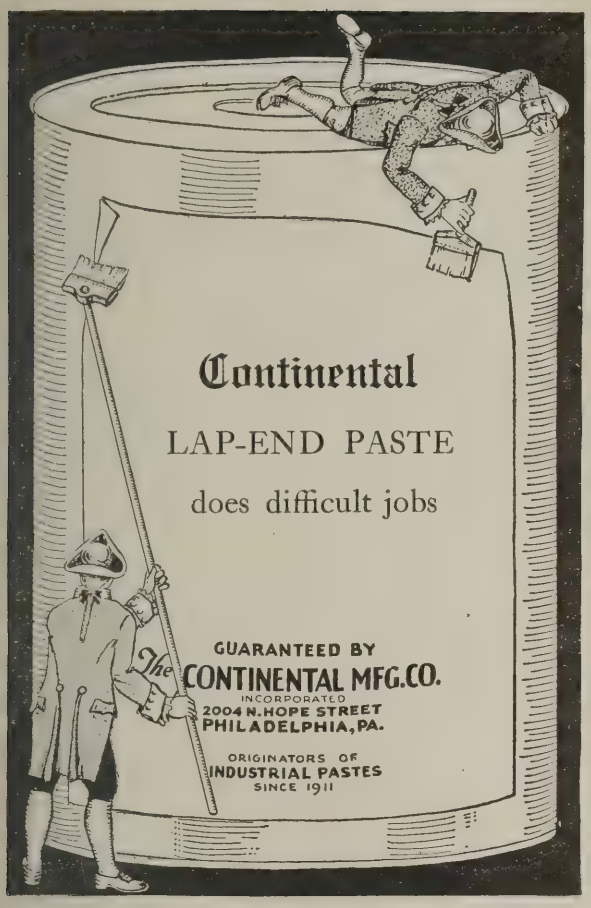
Wants Jobbers in Politics—C. W. Lithicum, secretary of the Arkansas Wholesale Grocers' Association, in a letter to members, says: "It seems to us that the wholesale grocers of this country get less recognition at the hands of our law makers than any other line of business. They get more adverse recognition. What are they to do about it? Get busy to electing men who will listen to your side of questions. Men who will not deem you as of no use to the community or the state or the nation. If you sit down, do nothing to help the right men, then don't get angry when they "sit" on the wholesale grocers. An old saying, "Be a live wire and you won't get stepped on" holds true in everything."

Warns Jobbers Against Carrying Medicinal Liquor—C. W. Linthicum, secretary of the Arkansas Wholesale Grocers' Association, says in a bulletin to the trade: "Reading the Arkansas Gazette, we find that the supreme court of Arkansas gave the following decision: 'That T. N. Sanders, of White County, must serve one year in the penitentiary for selling tonic, bitters and medicated liquors. His defense was that the liquors sold by him were sold as medicine, and he always refused to sell them unless assured that they would be so used. One witness stated that he had bought Jamaica ginger as a medicine because he was not in the best of health, felt run down, and that it made him feel better, but that he drank too much of it and got drunk. The court held that the law prohibited the sale of such medicated liquors for any purpose, which are fit to be used as a beverage.' It is therefore expedient that wholesale grocers refrain from handling any medicine that might come within the meaning of this decision, and we ask that you instruct your own salesmen to give this information to their customers in order that they may not have in their place of business for sale any articles of such nature."

Specialty Orders—Discussion of the handling of specialty orders is still a topic of unfailing interest among wholesale grocers. The following remarks, by F. D. Bristley, vice-president and general manager of the Royal Baking Powder Co., at the annual meeting of the West Virginia Wholesale Grocers' Association, are of interest to both manufacturers and jobbers; "I have previously stated, and will reiterate here, that I consider the practice frequently complained of by wholesale grocers of some manufacturers' salesmen shopping around among wholesalers to obtain a special discount or special price below the established price of the firm he represents in order that he might offer this special inducement to secure orders from the retail dealers, one of the most damnable practices in the specialty game today, and it should be stamped out. I have no sympathy for any manufacturer who will practice or permit such practices, neither have I any sympathy for any wholesale grocer who will be a party to any such practices, and it may be well to remind you now that such tactics can only be practiced with the support and by consent of wholesale grocers themselves."

31-E Automatic Strip Feed Press with direct connected Vacuum and Pressure Pump

THIS type machine operates successfully with one, two or three dies when producing articles from tin plate.



Standard Equipment

Adjustable Feed Finger Bar.
Release mechanism which disengages feed parts when conditions are not regular.

Cannery For Sale

By reason of the death of Geo. N. Numsen the undersigned, representing the interests of the firm of Numsen & Davis, have decided to offer at private sale the firm's cannery, located at Benedict, Charles Co., Md. This factory, located on the Patuxent River is completely equipped and has an abundance of tomatoes, peaches and blackberries available. Three hours ride by auto. from Baltimore. Ideal location, numerous summer resort hotels, and extensive automobile travel from Washington and other sections. On State Road.

THE FILTER

for

Vinegar– Sweet Liquors– Syrups–

Flavoring Extracts– etc.

This is the filter that transforms cloudy, misty products into beautiful, sparkling-clear liquids.

It is of good capacity, simple to prepare, and made ready for use in ten minutes.

Lined with pure copper, heavily tinned with pure block tin.

For use by gravity or with pump. We also make pumps for this purpose and for general service.

Write for catalog of Kiefer Filters.

The Karl Keifer Machine Co.,
Cincinnati, Ohio.

The Foundation of A GOOD LABEL

The design may be beautiful and the inks of the best quality but if the paper isn't right the label will not be right.

A good label must have a good foundation---fine paper. It must be paper that will stay white with age and it must be the right finish for color printing purposes. Also it must have the strength and texture to give maximum production on labeling machines.

We test every lot of paper we receive to make sure that it fulfills all these requirements. We use nothing but the best quality of coated and uncoated papers made for us on our order and always by the same formula.

On this foundation we build---with the taste and skill of long experience---labels that help sell goods.

CONSULT OUR TRADE MARK BUREAU

We maintain a bureau of brands and trade marks for the benefit of our customers. Write us for particulars. The service is free.

SMILE AWHILE

THE LOWDOWN.

An Iowa girl, en route to visit friends in New York, entered the city by the Hudson Tunnel, then took the subway to their address.

"What do you think of the city?" they asked on her arrival.

"I couldn't say," she replied. "I've had only a worm's-eye view."

"WHITE MULE."

A draft of Missouri mules had just arrived at the corral. An onlooker made the common but sad mistake of approaching too near to the business end of one of them. His comrades caught him on the rebound, placed him on a stretcher and started him for the hospital.

On the way the invalid regained consciousness, gazed at the blue sky overhead, expereienced the swaying motion as he was being carried along, and shakily lowered his hands over the sides, only to feel space.

"My gosh!" he groaned, "I ain't even hit the ground yet."

CAN'T SEE THROUGH 'EM.

Mrs. Suburbs—Why, Sarah, the parlor windows are so dirty I can't see through them.

Housemaid—Well, ma'am, I just come in the front door, an' except fer Miss Ritz an' her young gent across the way in the windy, there ain't a thing worth lookin' at.

THE SARCASTIC THING.

Voice—Main 1006, please—yes, 1006. Line's busy? Say, is this a telephone exchange?

Operator—Yes.

Voice—Well, I'd like to exchange mine for a second-hand toenail clipper.

THE GENEROUS COP.

"Did you have a good time in the park?" asked mother, as Betty came back from her walk.

"Oh, yes," was the reply. "We talked to a nice policeman, and he didn't arrest us even when nurse kissed him."

ALL'S FAIR WITH LOVE AND LANDLORDS.

Liza—Ah tol' de rent man us didn' have no money, so he said us'll have to move.

Rufus—Dat's all right, honey. He tol' Sam Johnson de same thing, so us'll just swap houses.

A FAIR BARGAIN.

Mrs. Kriss—What is it, Willie?"

Willie—When we ride in the cars today, if I tell the conductor that I am under twelve, can I be old enough to go to the movies alone after supper?

PASSING IT UP.

Guest (admiring hostess' little son)—And just think, some day he may be President of the United States.

Fond Mother—Really, now, it's very sweet of you to say that, but he's such a frail child that I'm afraid his health will not permit it.

A GENTLE HINT.

Diner—Waiter, would you mind closing that window?

Waiter—A slight draft, sir?

"Not exactly, but this is the fourth time my steak has blown off the plate."

A NOBLE AMBITION.

Aunt—What are you going to be when you grow up?

Willie—A prize-fighter.

"A prize-fighter! Why?"

"So people will be too scared to bother me by asking a lot of silly questions."

OVER HIS HEAD.

Tenant—When I rented this bungalow you promised to put it in perfect condition. Why didn't you repair the leak in the roof?"

Agent—The agreement does not allow me to repair it. You will find that it states you are to get "running water all over the house."

EDITORIALS

WHY WILL THEY DO IT?—We have not the slightest desire to join in the hue and cry against the daily press of our country; we know something of their troubles and vexations and of the really wonderful efforts they make to have their accounts of happenings absolutely correct, and yet published quickly, while yet news. As in a lot of other things, the public is badly spoiled in the wonderful newspaper service rendered it for a few cents at most. And, on the other hand, the public is always too eager—too glad, it would seem—to pick out the motes of error or imperfection found in its daily papers. These daily papers must stand out on an eminence, as it were, before the gaze of the millions, and as each single individual of those millions constitutes himself a pre-eminent judge of everything which that daily paper does or says, it is not surprising that the newspapers are severely criticized, and the miracle is that they are not more frequently at fault. Someone has said, you know, that there are just two things which the other man (any man) can do better than the fellow doing it—and that is publish a newspaper and run a hotel.

And yet despite this kindly feeling for our fellow-journalists and an understanding of their troubles, we cannot but get "riled" once in a while when we see some things they do. It is said the dailies like the sensational because the public wants it; but, at least, they should consider in this service the degree of sensation, and particularly its lasting effect upon their readers. To dangle before the eyes of the public the nauseating details of a divorce case, of a rape, murder or suicide is something which, personally, we do not see how they can do; but, even so, the public need not be more than passingly affected by such tales, because the public has no part in it, and need take no part in it. But when the dailies let this mad rush for the sensational carry them into the realm of food matters, then they are making a grievous mistake if not very careful in what they say. Foods the people must have, and when these dailies blazen forth a terrifying account of possible death and sickness, they reach into every home, touch the vitals of every individual in it, and this should make them realize the absolute necessity of care and precision; ought to make them hesitate, investigate and be certain that what they are about to say about a food and its possible effect upon the health, is absolutely true and not exaggerated. And what is more, they should be careful in accepting the version of many so-called food men. Not all the utterances or opinions of the doctors are correct, as all the world knows, and not all food men know what they are talking about, but most of them are very stubborn in their views, and particularly if their opinions are attacekd, they seem to set their feet and refuse to move. There are plenty of eminent food authorities among the enforcement officials and others, and these the dailies should consult before rushing out to the public with alarming statements regarding foods. If they would do that they would serve their public better and avoid needless worry and anxiety on the part of the people regarding their foods.

One of our great Sunday daily newspapers carried this story:

POINTS OUT DANGER OF POISON IN FOOD.

Health Department Makes Statement on the Botulism Outbreaks.

GERMS IN CANNED GOODS

Malady Sometimes Caused by Imperfectly Preserved Products

The report that four persons were victims of botulism poisoning from eating ripe olives in Wyoming yesterday brought forth the following statement on this malady from the State Health Department:

"Botulism is due to a poison secreted by the botulinus, a species of bacteria. This germ seems to be nearly harmless unless given a chance to produce its poison in foods that have been preserved imperfectly. The germ itself cannot live in the human body. It plants its deadly poison in the canned food on which it feeds.

Noted in America in 1909

"It was observed for the first time in this country in 1909. Since then, according to a bulle-

tin published recently by the United States Public Health Service, 91 single or group outbreaks of botulism have been reported in this country and Canada. A total of 345 persons have been affected. of whom 213 died, giving a case mortality of 61.7 per cent.

"About two-thirds of the outbreaks were caused by preserved vegetable food and the other third by canned meats. Spoilage of food from this germ cannot be detected always by the appearance or odor of the food.

Can Be Killed By Heat

"To make sure that the spores of the germ are dead it is necessary to heat canned foods to a temperature of 240 degrees Fahrenheit at the center of the food for 10 minutes, or heat the whole mass of food at 212 degrees for six hours.

"A tabulation by the Federal Health Service of the canned foods tainted with botulism poisoning shows that home-canned products were greater offenders than commercially packed food products."

Here is a sample of thoughtless and needless torture of the public. The daily papers are not unfriendly to the canned foods industry; they are not trying to harm it, much less kill it, and yet if they were trying to do just that, they could not more skilfully conduct their campaign.

There is just enough flavor of the scientific about this article to make the public receive it with confidence, and yet a few moments' analysis of the statement would take all the sting out of it. That botulism exists cannot be denied, but it is about as rare as the dodo, and the average person has about as much chance of being affected by it as he has of having his heart plucked out by an eagle from the skies. Take the figures quoted in the article: Since 1909, when the trouble was first detected, up to the present year, 1924, and in the 15 years you have 345 people affected. To reduce this to a mathematical ratio takes us into a realm of figures which we are not able to follow; but just consider the millions of people in the country eating three or more meals per day for 15 years, and yet out of that tremendous mass of food of every kind there were 345 people affected by this germ of botulinus, supposing diagnosis of these troubles to be correct. Now, the truth of the matter is that the people affected were in three or four groups—possibly less—all affected at the same time, or as we might say from the same lot of food, and you reduce this "dreaded attack" to three or four instances over a period of 15 years or more. Billions and billions of tons of food, prepared under every conceivable condition, eaten by people in all manner of health or sickness, by over 1,500,000,000 people, and there have been but three or four instances of the botulinus germ found—and they call that a danger or "poison in food."

Yet that article will serve to turn hundreds, if not thousands, away from the use of perfectly good canned food. The alarmist is a thousand times, yea, millions of times worse than the disease, and causes suffering in proportion through the denial of these people of foods they might be enjoying.

Canned foods as we know them, and as they are produced by our readers, need no defense in this, and we are attempting none for them. The process of canning is the antidote for every possibility of botulinus poisoning, as well as for any others that might be imagined or conjured up in the fertile brains of the alarmists. The canner presents the consumer a package of purified food—if it ever needed purification—of sterilized foods, even as the surgeon sterilizes his implements before the most delicate operation, with this difference: the tin coat put around the food and called a can, keeps the food in its pure state until the consumer uses it on her table. And that is why the most eminent scientists have said that canned foods are the finest, safest foods which come to the consumers' tables. And that is why it is a crime to scare people about them by distorted half-truths and worse.

REMEDY FOR TOMATO STEM ROT.

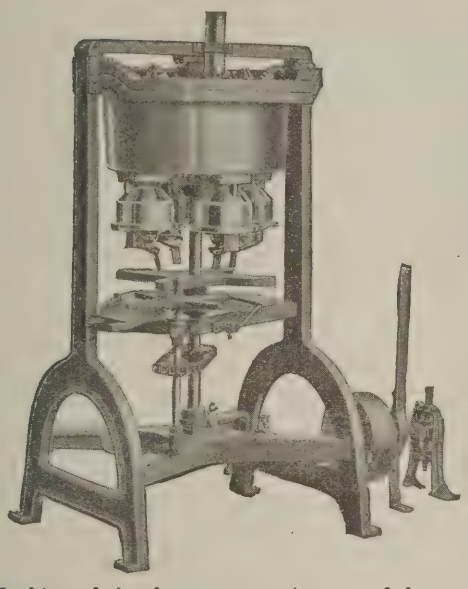
MR. C. E. TEMPLE, State Plant Pathologist of the University of Maryland, has just written us as follows:

"I noticed in The Canning Trade of July 14th that the stem canker (stem rot) of tomato is quite prevalent in Delaware. Since this disease has appeared also very widely distributed in Maryland, and I understand that it is also prevalent in New Jersey and Indiana, I thought it might be of interest to you to know that affected plants will usually recover if the soil is ridged up about them, so that roots may be produced above the canker.

A few years ago we had an epidemic of this disease on the Western Shore of Maryland, and this was the only treatment that seemed to yield any results."

Mr. Temple is an expert in these matters, and his advice is well worth serious consideration, and we have no doubt the tomato growers will welcome this suggestion.

HEAVY SUGAR CONSUMPTION.



During the first six months of 1924 the American people consumed 6,247,000,000 pounds of sugar, according to figures compiled by Facts About Sugar, the trade journal of the sugar industry. This represents an average of approximately 56 pounds for every man, woman and child in the country, including, of course, the quantity consumed in manufactured products, such as candy, ice cream, soft drinks and bakery products, as well as that required for ordinary household use.

This is an average of over two pounds per week per person for the whole country. For the six months period the amount used per capita is about two pounds more than during the first half of 1923, and about two pounds less than in the first half of 1922, when consumption of sugar reached its highest record.

While the distribution of sugar is regularly higher during the first half of the year than during the second half, present indications are that the total amount used during 1924 will amount to 11,200,000,000 pounds, or an average of 100 pounds for each resident of the country. Last year it was about 95 pounds. Apparently the explanation of the larger consumption this year is to be found in the fact that the average retail price has been from one to two cents a pound less than last year. This year's crop of beet sugar in the central and western states and of cane sugar in Cuba, Porto Rico and Hawaii, all of which enjoy a tariff preference in the United States markets, are larger than last year's, and the increasd supply has brought down the price paid by consumers.

The Indiana Pulp Filler

For No. 10's

A Machine of simplest construction yet of heavy design to insure service, and built along the most sanitary lines. It has the capacity of any closing machine onto which the cans are transferred. Made of non-corrosive aluminum or bronze. It is positive in its operation and accurate in filling. Has several special features which invites your investigation.

Truly a Filling Machine.

FILLING MACHINE

for
Vinegar—Syrups—Fruit Juices—
Flavoring Extracts—etc.

The "P" Type Filling Machine, illustrated here, has become a very popular filler with manufacturers whose output does not warrant our larger automatic machines.

It is a simple, sturdy little filler that can be depended upon to do the work right and not give you trouble. Nothing to break or get out of order.

Handles a great variety of bottles. Quickly cleaned without taking anything apart.

We make all types and sizes of filling machines from this simple, inexpensive filler up to fully automatic equipment.

Write for catalogs.

Common Pests of Field and Garden Crops

By R. H. PETTIT

of the Agricultural Experiment Station Michigan Agricultural College

(*Continued from last Week.*)

The Cabbage Aphis

(Aphis brassicae)

From mid-summer until fall cabbages are subject to attack by plant-lice. Of course, the lice are present earlier in the season, but in such small numbers that they escape detection. Both winged and wingless forms occur, all of them being covered with coats of fine waxy powder, very much like the bloom on the leaves of the cabbage on which they rest. This waxy bloom no doubt serves us a protection by helping to conceal the insect, but when we come to spray we find that it helps very effectually to repel the liquid. Lying as they do in closely packed colonies, which sometimes cover almost the entire underside of a leaf, one would expect to kill them with ease. One finds, however, on trying to do so, that most spray mixtures slide from them like water from a duck's back. Furthermore, it is very difficult to reach them when they are under the foliage. In order to overcome this last difficulty, we have used a short extension, about three and one-half feet long, with a Vermorel nozzle set at right angles to the extension. This makes it easy to reach the undersides of the leaves, and by simply turning the extension in the hand one can spray downward on the head of the cabbage.

The best spray for the lice is made by diluting 40 per cent nicotine sulphate (black leaf 40) with water and adding considerable soap. Use one part of the nicotine to eight hundred of water, and to every barrel of the mixture add two or three pounds of soap. The difficulty will lie in hitting all the lice, and the lice must be hit to be killed.

Dusts of nicotine may be used instead of a spray and with good results.

Cabbage Flea-Beetle

(Phyllotreta vittata)

Like all of the flea-beetles, the cabbage flea-beetle is small and inconspicuous, though very active, jumping long distances when disturbed. It is less than one-tenth of an inch in length and black in color, with a well-marked yellowish stripe on each wing-cover. The larva is said to be long and slender, and to mine in the leaves of young cabbage plants.

REMEDY:—The worst damage is inflicted by these little pests when the plants are young and long before the heads are formed. At this time a spray of an arsenical and bordeaux will serve to check them, the bordeaux acting as a repellant. It is probable that nicotine dust would also serve the purpose if dusted on the young plants. After the heads commence to appear it is unsafe to use any of the arsenicals.

Cabbage Maggot in Cabbages and Cauliflower

(Phorbia brassicae)

Cabbage plants and cauliflower plants stand a much greater chance of escaping the attacks of root maggots if protected by disks of tarred paper when first set out. The adult stage of the maggot is a fly, something like a house-fly, only smaller. The female of the fly lays her eggs on the stem of the plant, just above the ground level, and the maggots from these eggs descend into or around the roots, usually killing plants. Fortunately, the flies dislike the tar-paper disks and seek other plants of the mustard family when they encounter these disks.

Secure a quantity of tarred building paper and cut it into squares or circles from two to three inches across. Punch a round hole about one-fourth inch in size in the center and then cut a slit from the hole to one side. A large harness punch cuts a clean round hole, and the writer usually uses one with a pair of tinsmith snips to prepare the disks. In quantity, of course, it is best to buy them already prepared. Place the disk so that the stem of the cabbage plant comes up through the hole in the center, and press the disk down flat to the soil at the time of setting out plants. The result is often 90 per cent of immune plants at a time when unprotected plants alongside are practically all lost.

European Corn-Borer

(Pyrausta nubilalis)

The European corn-borer is one of the most undesirable aliens that has ever come to this country. It is a first-class destroyer of corn, sorghum, broom-corn and a number of vegetables having fleshy roots or stalks, such as celery, bean, sunflower, rhubarb and many others. Worst of all, it will feed when forced to do so on a long list of less important crops and on very many weeds, notably on the smart weeds (Polyganum). The insect was first noticed in this country in 1917, when it appeared in the vicinity of Boston, since which time it has appeared in New York State, Pennsylvania, Ohio and Michigan, as well as in Ontario, Canada. The insect is so well established at this time that we must forego all hope of ever exterminating it.

When working in corn, the larvae tunnel through the stalks and the ears, not refusing, however, to bore into roots, tassels and leaf-ribs. The presence of the pest is often revealed by the breaking over of the tassel, which has been weakend by the tunneling of larvae. Other larvae bore into the growing ears, and all parts of grain and cob are utilized for food.

Similarly, other plants are pierced by tunnels, and such plants are always likely to serve as distributors of individuals to new localities when carried from place to place. Thus the carrying of cut-flowers, such as dahlia, chrysanthemum and gladiolus, or of such plants as chard, beans, celery, beets, spinach or a host of similar plants, is to be discouraged when they are to be taken from an infested district to one in which the pest is not already established. The injury inflicted to corn may run from a slight one to a total loss.

The corn-borer passes the winter as a full-grown larva or "worm," about an inch long, in a tunnel burrowed in the plant on which it is working. Here it rests until about the middle of last of May, when an exit hole is prepared, after which a flimsy cocoon is spun, in which the change to a pupa takes place. During June the adult moth emerges from the cocoon—moths capable of flying to a distance of many miles. Eggs are placed in groups of 15 or 20 on the leaves or stems of

the plants, some females producing over 1,000 eggs each. From these eggs come the larvae which do all the damage. Sometimes one generation and a partial second is produced, and at other times two generations in a season.

A number of different moth larvae closely resemble the European corn-borer in general appearance, and a few resemble it very closely. The common stalk-borer, the smart-weed borer, and the corn-ear worm are most likly to be confused in Michigan, although there are others, like the broken-lined stalk-borer (Hadena fractilinea), which are frequently met in Michigan.

The spread of the corn-borer seems to be considerably slowed up by the practice of cutting low. Corn cut low and placed in the silo supplies a minimum of stubble for the over-wintering of the larvae.

The principal measure which promises control of this pest consists of the destruction by fire or otherwise of remnants of corn plants, sorghum, and broom-corn, and the destruction of weeds, the most important of which is smart-weed. This means that corn-stacks not used up by the first of June should be disposed of; also, refuse from canning factories and broom factories, and garbage containing any fleshy stems or parts of plants. The fall plowing of stubble in infested fields and the rolling of such stubble fields previous to plowing, are practices said to be very helpful, in that they make it possible to bury plant parts more evenly and deeply. Such plowing should be done in Michigan from mid-November on until the ground freezes. Plowing done before this date, or done in the Spring, is not so effective, since many larvae migrate to surface and establish themselves. Rolling or even the dragging of a heavy pole across the field is recommended when it is impractical to plow, since this crushes down stalks and prevents them from drying out. Material which is made into silage is safe. Quarantine measures instituted by the Federal Government and by the several States should be strictly observed as a partiotic duty. The establishment of new areas of infestation is to be held back just as long as possible in order that more effective means of control may be devised before the distribution becomes general.

For a comprehensive discussion of the pest, see Farmers' Bulletin No. 1294, U. S. Dept. of Agr., by D. J. Caffrey and L. H. Worthley, both of the U. S. Bureau of Entomology.

Corn-Ear Worm

(Heliothis obsoleta)

It is practically useless to try to forecast years in which the corn-ear worm will be abundant in the North. In some seasons one finds 75 per cent or more of the sweet corn invaded by the striped larvae or "worms," working on the kernels when they are "in the milk," or later until they become hard. The entrance is almost always made at the tip of the ear, but when the husk is removed the larvae may be found almost anywhere. Usually only one larva is found, due to their well-known canabalistic habit.

An ear of sweet corn is practically ruined by a single larva, since the space left by the destruction of the kernels is almost sure to become the medium for fungus growth, one species of which produces a dark stain, ruining the ear for table purposes. Furthermore, at least some of these fungus growths prove poisonous if eaten by livestock.

Field corn is also attacked and likewise popcorn, but in the case of field corn, the uneaten kernels mature, and when shelled off and cleaned they are practically undamaged. The corn-ear worm is found all over the United States and Southern Canada, and its range extends to a good part of South America. It is found as well in all the continents of the world. In our Southern States it is known as the "cotton-boll worm." It is also a serious enemy to tomatoes and of lesser importance to a long list of other vegetables. In the South there are several generations each year, fewer generations appearing as we progress northward. Each female is said to be capable of laying several hundred eggs, even up to 2,500. When corn is attacked the eggs are likely to be laid on the fresh silk, the newly hatched larvae eating their ways down to the kernels. When full grown the larva leaves the ear and buries itself underground, where it changes to a pupa in an earthen cell. Later the pupa produces a clay-colored moth.

The number of infested ears of corn may be greatly lessened by dusting the silk, just after it is pushed out, with powdered arsenate of lead and hydrated lime or sulphur, mixed about half and half. The dusting may be accomplished with a hand duster, and the application should be repeated once or twice before the corn is ready for market. Such a dusting would seem to be warranted in fields of sweet corn and in fields of pedigreed field corn—in fact, wherever the value of the crop will pay for the treatment. It may be regarded somewhat in the light of insurance, and, while protection of the crop is not likely to be complete, the number of perfect ears is sure to be greatly increased.

Once in a number of years one finds ears of corn late in the season with a number of larvae present—larvae which resembles those of the ear worm so closely that to the farmer they never even awaken any suspicion that they may be anything else. Usually such larvae belong to another moth, the "Fall Army Worm" (Laphygma frugiperda), which also attacks all sorts of crops, besides the corn. In Michigan beans are likely to be eaten. Attacks by the fall army worm come at long intervals in Michigan, and the best control seems to be the use of poisoned-bran bait, a control which, at the very best, is unsatisfactory.

CHOOSE SPRAYS CAREFULLY.

H. F. Wilson and C. L. Fluke, of the University of Wisconsin, Madison.

INSECT PESTS destroy a minimum of 10 per cent of all farm crops annually, according to estimates over a number of years, although in local instances as much as 75 per cent of a particular crop may be destroyed. In the majority of cases, however, these losses are preventable by the use of the proper control measures. Of the thousands of insect pests known, only a comparatively few attack Wisconsin crops. The most important of these are the codling moth, plum curculio, Colorado potato beetle, potato leaf hopper, onion maggot, cabbage and radish maggot, cabbage worm, pea aphis, cucumber beetle and squash borer.

Control measures are often based on the fact that in most cases there is some one point in the life of the insect where it is much more easily destroyed than at any other time. Some are more easily killed during the egg stage; others during the larval stage; and a considerable number are more easily destroyed during the adult stage. Regardless of these stages, it is always desirable to destroy an insect before it can do any damage to crops.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

It Cleans Clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan.

The four distinct kind of combative measures now in use against insects are: Preventives, insecticides, mechanical destruction and destruction by other insects that feed upon their own kind.

Mechanical Barriers—These consist in covers which protect such plants as bean, cucumber and melon vines from attack; sticky bands for keeping insects out of trees; hopperdozers for collecting grass hoppers; washes or screens made of paper or wire to keep borers out of trees; cards placed about radishes and cabbages to prevent egg laying by the adult fly, and ditches or dust furrows about fields to stop migrating cut worms or army worms.

Repellents—A repellent is any substance which will keep away insects by some offensive property which is usually due to the odor of the material used. The vapors of coal tar products are among these, and as they are poisonous when breathed into the body, insects probably keep away on account of the choking sensation produced within their breathing parts.

Cultural Methods and Farm Practices—These consist of clean cultivation; keeping down weeds and cleaning up and destroying rubbish in the corners and fence rows; burning all prunings from fruit trees; use of catch crops for cucumber beetles, squash borers and similar insects; rotating crops; fall plowing in the colder regions for wireworms and grubs; cutting out and destroying infested plants for raspberry cane borer, strawberry borers and othes, and the planting late to avoid the late brood of the hessian fly.

Chewing and Sucking Insects—Insects vary in the way in which they attack the plant. Some secure their food by chewing the plant, while others have mouth parts that enable them to form a piercing and sucking apparatus through which they can draw the juice from the interior of the plant. This often causes the tissues to shrivel and wilt, frequently resulting in the death of the plant.

Common Poison Insecticides Have Same Base—Arsenic oxide, the base of all important insecticides now used against chewing insects, is a substance which cannot by itself be used with safety on plants because of its tendency to burn the foliage. In combination with other substances, it acts as a poison to insects, but it does not cause harm to plants unless in a liberated form, as arsenic oxide. The principal substances with which it is combined for spraying are copper (paris green), zinc (in arsenite of zinc), lead (in arsenate of lead), and calcium (in calcium arsenate). These four poison sprays are the ones now mostly in use.

Paris Green Injures Foliage—Paris green in comparison with other insecticides has a higher arsenical content than the other materials and a greater killing efficiency, but it is not an economical spraying material at 40 cents to 80 cents a pound, and it has a tendency to cause foliage injury. For these reasons, it seems that it is more desirable to use one of the other sprays.

When paris green was first put on the market it contained a comparatively large percentage of free arsenic oxide, but this has been considerably reduced through present methods of manufacture, and in time it is possible that a paris green may be manufactured that will not injure the foliage any more than the other arsenicals. However, at present the percentage of free arsenic oxide is so great as to cause much more burning than is generally realized by our growers.

Paris green does not have the sticking qualities of the other insecticides, nor does it stand in suspension as well.

Arsenate of Lead Desirable—Without question arsenate of lead is the most desirable poison insecticide on the market, and more generally used than any other. The reasons are that, when properly prepared, it is safe to use on the foliage of practically all plants, it stands well in suspension, and it sticks and spreads well on the foliage. It does not have quite the killing efficiency of paris green, but the difference is small in cases where pure arsenate of lead is used.

The insecticide manufacturers and chemists know arsenate of lead in two forms. In each one the arsenic forms a different combination with the lead, so that in the one known as hydrogen, acid or diplumbic arsenate of lead there are two parts of lead and one part of arsenic oxide, forming a material with 33 per cent* poison in it. The second form of arsenate of lead, known as basic, neutral or triplumbic arsenate of lead, forms a combination in which one part of arsenic oxide is combined with three parts of lead, and in which the poison amounts to 25 per cent* of the total.

Basic Lead Arsenate Best for Tender Plants—The basic lead arsenate forms a more stable combination between the lead and arsenic than does the lead hydrogen arsenate. For this reason it does not break down as rapidly in the presence of water or air and is the most desirable spray to use on tender plants in certain climates. However, this slow breaking down makes it an undesirable spray against those insects which are not quickly affected by poison.

The lead hydrogen arsenate is more easily broken down in contact with air, water or other chemicals, and for this reason acts more quickly and has a higher killing efficiency than the other form. But for this very reason it is somewhat more dangerous to use on the foliage of tender plants. The present methods of manufacture, however, are such that the free arsenic in either one of the two forms is so limited that practically no injury results from the use of either.

The difference in the killing efficiency of these two forms probably accounts in a large measure for the unsatisfactory reports on the use of arsenate of lead to control the Colorado potato beetle. The basic arsenate is so slow in its action that very poor results are obtained when used against this insect, but lead hydrogen arsenate in small amounts gives immediate and efficient results. It has also been noted that, while insects that have been fed on the basic lead arsenate do not die immediately, most of them become sick and do not feed after receiving a dose of the poison. Practically all the lead arsenate on the market today is the lead hydrogen form.

Hardy Foliage Withstands Zinc Arsenite—Arsenite of zinc has come on the market in recent years, and next to paris green it seems to have a greater killing efficiency than any of the other isecticides given. However, it is somewhat variable in its action, and its value is not fully determined. It seems that it cannot be used with safety on fruit trees because of its tendency to burn or crimp the leaves, but it has been found to be a very efficient spray for potato bugs, without causing injury to potato foliage. It should be slightly cheaper than arsenate of lead, and would, therefore, make a very desirable spray to use on potatoes and other plants with hardy foliage.

*Percentage refers to arsenate in powdered form.

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Huddleston, Va., July 9, 1924—Tomatoes—We have 60 acres contracted. Crop conditions are fair. I think normal conditions are existing.

Centerville, Md., July 8, 1924—We will pack tomatoes only this year. There has been a large acreage planted, but the wet, cold weather has been very hard on them; a large portion of the first plantings were destroyed by cutworms. Today, the 8th, we have had a fearful rain; saw some patches under two feet of water and others beaten down by the downpour. They will be very, very late, and we do not expect to have any to pack before the 10th of September, and if the weather continues as we have had all spring, "Yes, we will have no tomatoes."

Bordentown, N. J., July 7, 1924—Peas—Finished packing July 3rd, with yield of 40 per cent. of normal.

Lima Beans—Crop looks well at this stage, but too early to say much.

Brunswick, Me., July 10, 1924—Corn late, but growing well. Moisture satisfactory up to present time. Generally good showers during last few days. Except for lateness, condition 90 to 100 per cent.

Peas—Promise a good crop. Have grown well and conditions to date have been satisfactory. Recent rains. Now starting canning.

Cut Beans—Same condition as corn and peas.

Portland, Me., July 10, 1924—Sweet Corn—Conditions good, better than last year. Planting slightly earlier on the average and weather conditions are now ideal.

String Beans—At least 30 per cent increase in acreage. Reports indicate beans are growing well and the yield will be at least up to average, unless adverse conditions develop between now and harvest time.

Reports indicate a much larger yield for apples this year than last year. In fact, it looks like a good year for apples.

Blueberries—Reports from Eastern Maine indicate that the prospects for blueberry pack are good. Blueberries are said to be in fine condition. There will be a meeting of the blueberry canners in conjunction with representatives of the Bureau of Chemistry, National Canners Association, Maine Canners Association, Maine State Department of Agriculture and others held at Bangor on the 18th instant, with a view to correcting some trouble which developed last year as the result of packing late berries. This will be a distinctly co-operative meeting, and good results are expected from it.

Peas—Only two companies pack peas in this state, and these for only a moderate acreage, but from such information as we have we believe that the pea crop will be good this year, although a trifle late.

Ellsworth, Mich., July 10, 1924—There is a good acreage and prospects look good.

Sour cherries will be ready to pick and can about July 15th.

Sweet cherries are ripe now. About 70 per cent yield.

Wax string beans will be ready to can in ten days to two weeks time. Crop looking fine.

Corn is at least two weeks late, and at present looks like a 70 per cent crop.

Beets are doing well. Cut worms destroyed 20 per cent of crop.

Apple orchards look promising.

A fair acreage of pumpkin and squash is planted, only late.

Bunker Hill, Ind., July 10, 1924—We pack nothing but tomato products. The prospects at this date are not encouraging. The plants are very backward and uneven, the fields having been flooded, and whenever water soaks in the ground for any length of time the plants are dead. I should say that the prospects at this day are about 60 per cent crop. It will all depend on the weather from now on. Added to all of our troubles is that the nights are cool and not enough heat in the daytime. Weather too cool.

Muncie, Ind., July 10, 1924—More acres. Prospective yield less. Causes: Rain and late planting, shortage of cultivation.

Streator, Ill., July 11, 1924—About 30 per cent on corn. Too early to tell about tomatoes.

Bloomington, Ill., July 10, 1924—Aside from the loss of a few acres of our sweet corn by heavy rains, we have about the usual acreage in sweet corn. The crop is doing well at this time, but the canning season will open ten days to two weeks later than usual, and will need favorable weather if we are to secure the full crop for canning.

Atlantic, Ia., July 11, 1924—Sweet Corn—Acreage originally 1,600 acres, loss by flood 400 acres. Crop on high land looks good. Estimate our crop conditions 70 per cent as compared with normal.

Pumpkin—Considerable destroyed by flood, but in all probability will have sufficient quantity for our requirements.

Many acres of sweet corn have been destroyed beyond redemption in State of Iowa. From what we can learn the crop in Iowa will not exceed 70 per cent of normal.

Fremont, Nebr., July 11, 1924—Sweet Corn—Acreage 1,000, conditions compared with normal years 80 per cent.

Audubon, Iowa, July 10, 1924—Corn in this state and Nebraska is between two and three weeks late. On account of seed being weaker than usual, we contracted for about 40 per cent average more than we had last year. By hand-picking the seed and having our farmers plant about four pounds more to the acre we obtained a good stand on 75 per cent of our acreage. We have had very heavy rains, which washed or drowned out about 30 per cent of our acreage, so that we still have almost a normal acreage left, which if we have a favorable fall will give us a fair pack. In case of frost about the middle of September we would lose at least one-half of our acreage. We do not believe that the packers of corn can under the most favorable weather conditions realize a normal pack.

Waterloo, Iowa, July 10, 1924—Corn, so far as Northeastern Iowa is concerned, is about 75 per cent of a normal stand and about three weeks later than last year.

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

Owensboro, Ky., July 10, 1924—Tomatoes—Condition of crop good. Prospective yield above average normal year.

Lexington, Ky., July 9, 1924—Tomatoes—Double the acreage. Crop looks fine.

Sweet Potatoes—About same. Very late planting.

Burnside, Ky., July 9, 1924—We have a new canning plant, just completed, and can pack anything in the fruit and vegetable line except corn, but our principal output this year will be tomatoes and sweet potatoes. We have 125 acres in tomatoes this year, but have a plant capacity sufficient to handle a 200-acre crop, which we hope to bring it up to next year, and also handle some other vegetables, such as beets, beans and peas.

Our tomato crop is looking fine, although on account of the late spring they were late in getting the plants out, but if we have continued good season we will have a good yield.

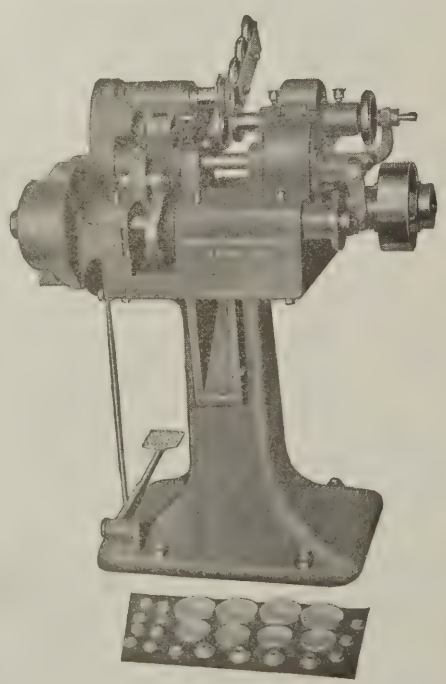
This will be the first year that tomatoes will be grown for canning purposes, but the soil here is well adapted to tomatoes, so we think the farmers will find this a paying crop, and we will have no trouble in getting our acreage in the future.

Dandridge, Tenn., July 11, 1924—Tomatoes—Acreage above last year. Crop normal to date, but too much rain, and unless we have more sunshine crop will die soon.

Stringless Beans—Short crop.

Fayetteville, Ark., July 11, 1924—We pack only tomatoes. We have a normal acreage, but the plants went in the fields about two weeks late. There was so much rain following setting that many fields became very weedy. Rains stopped about three weeks ago. Fields have all been well worked. Some of them too much. Very little fruit yet on vines, and are needing rain. Will be the last of August or first of September before any packing to amount to anything. No tomatoes being offered from this section.

Crop is all to make yet. With ideal weather conditions, this country could pack as many tomatoes this year as last.



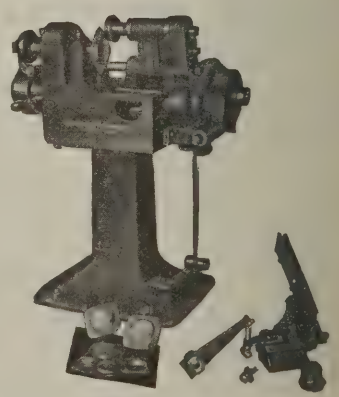
Augusta, Wis., July 10, 1924—We started packing peas Wednesday, but they are maturing slowly. Will be running full capacity Monday. Vines look strong except in low and cold soils. There seems to be a shortage of pods. We are looking for a fair crop, quality seems good. Acreage is normal.

Corn is late, very uneven. The cold, wet spring weakened the germination. Considerable corn was washed out or covered. Weather favorable for corn at the resent time. Normal acreage.

Cabbage is looking good. Plants have a good start. Plenty of moisture. Normal acreage.

Palmyra, Va., July 9, 1924—Tomatoes—Do not expect over one-third pack this year. In the first place, the farmers could not get them planted. Next, what is planted looks so bad that we do not expect over one-third of what we expected when we contracted.

Princess Anne, Md., July 15, 1924—Our acreage is about 75 per cent of what it was last season. Plant conditions very poor. Looks at present as though we will not have a 50 per oent crop on our 75 per cent acreage.



ONE BLOCK AHEAD OF THE PROCESSION

This No. 46 Thread Rolling Machine is worthy of a place in the "CAMERON FAMILY."

One user writes: "I find it a great advantage to be able to remove the automatic feed when I have odd-shaped articles to be threaded."

No. 390

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

LANSING B. WARNER, INCORPORATED
155 E. Superior Street,
Chicago, Illinois.

Kenton, Del., July 16, 1924—Acreage normal Prospect of crop 50 per cent normal. Two to three weeks late.

Bridgeton, N. J., July 15, 1924—Tomatoes—Very late in setting out. Fields very uneven on account of bugs and cutworms destroying plants. Also stem-rot has taken many plants. Will not pack before September. Do not think the yield can be over 60 per cent of last year.

Blanchester, Ohio, July 14, 1924—Corn. Poorest prospect we have ever had on sweet corn. Crop very late and of poor stand. With corn weather from now on cannot expect over 50 per cent pack. Fields very grassy and flooded now.

Lebanon, Ohio, July 11, 1924—Corn—All planted late on account of extreme rainy weather. The corn is not far enough advanced to tell what it will make. Weeds are plentiful. If conditions are favorable from this time on we will have about a 50 per cent of normal pack.

Our acreage is normal, amounting to about 500.

Eureka Springs, Ark., July 12, 1924—Tomatoes—The backwardness of the crop and the situation in general in this territory indicates that the pack this year will be as small, if not smaller, than last year. A great many canners have withdrawn future orders.

The acreage of tomatoes in this territory is probably 25 per cent more this year than last, but the pack will be as small, or smaller.

Queenstown, Md., July 16, 1924—Tomatoees—Very late; one good patch in every five. Many will yield practically none at all. Acreage about normal; look for about 60 per cent of a normal crop.

Corn—Same as tomatoes.

Halls, Md., July 15, 1924—Tomatoes—Much later than last year and only have about 75 per cent as many planted as last year. Have about 70 acres planted this year.

Phalanx, N. J., July 16, 1924—Tomatoes—Acreage 150 per cent of last year. Prospective yield 75 per cent of last year.

While the crop of tomatoes here is quite late, the stand is fair and plants look in good condition.

Washington, N. J., July 16, 1924—Tomatoes—Crop is coming along in grand shape. Will can about same quantity as last year. Wonderful growing weather for tomatoes.

Smyrna, Del., July 16, 1924—Tomatoes—Acreage from 20 to 25 per cent less than planned for in the spring. Patches generally late and badly broken on account of unusual ravages of cutworms and other insects. Also considerable damage from stem wilt, black rot and other diseases. August canning this year in this section will be practically nil. Active canning will scarcely begin this season before September 10th or later. It will require an unusually late fall this year to make a pack much above 50 per cent of normal. As we see it, it is purely a weather proposition. With most favorable weather from now on to late fall a fairly good pack is entirely possible.

Slaysman's No. 0 Double Seamer

This Double Seamer will do the same class of work as the more costly machines.

Especially adapted for double seaming tops on filled cans.

Weight, 150 lbs.

Will receive cans up to 7½ inches diameter by 8 inches high.

Diameter of tight and loose pulleys, 6 x 3 inches.

Speed, tight and loose pulleys, 600 r. p. m.

THE INCREASING TOMATO CONSUMPTION.

R. W. Messenger Sees a Steadily Increasing Demand, Checked Only by This Season's Curtailed Output—Better Goods One Great Cause.

Federalsburg, Md., July 14, 1924.

Editor "The Canning Trade,"
Baltimore, Md.

Dear Sir: In practically every issue of your paper for the last five months you have fought for higher prices for future tomatoes and warned Tri-State sellers especially of what was going to happen to them if they sold at the prices some of them persisted in selling at during the whole period. This is the fourth consecutive year you have done the same missionary work, but in spite of your missionary work the bulk of the tomato pack for each one of these years has been sold for future delivery at or below cost, while those who waited until the goods were packed before selling them have, until this year, been able to get a fair profit. This year the only danger is that prices will go too high on account of a real shortage of production such as we have not seen in many years.

I heartily agree with all those gentlemen who have already reported what bad condition the crop was in in the main producing section of the Maryland-Delaware peninsula, and, judging from what direct correspondents tell me, plus newspaper reports, believe the crop will be short in every State in the Union except, possibly, two or three, and these two or three are States with a comparatively insignificant output. Certainly in the section of this peninsula within 35 miles of Federalsburg which last year packed nearly four million cases of tomatoes and during the war packed much more than four million cases of tomatoes, the crop prospects are very bad, indeed, and we are going to have a very light pack. The pack of Maryland and Delaware taken together is sure to be very much smaller than it was last year, and what difference does it make for two or three States whose normal pack is five or six hundred thousand cases each to pack twenty-five per cent more than they did last year, when Maryland and Delaware pack two million cases less than they did last year?

But in addition to the crop problems, there is one very great market influence which no one seems to have written about in your columns. Consumption of canned tomatoes is increasing by leaps and bounds. In 1921 we had a four-million-case pack, and the biggest bears who managed to get their thoughts into print estimated the carryover, which was mainly in the form of Government goods, to be six million cases. They were almost cleaned up, which would indicate a consumption of ten million cases by August 15th of

COOKER-FILLER

This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

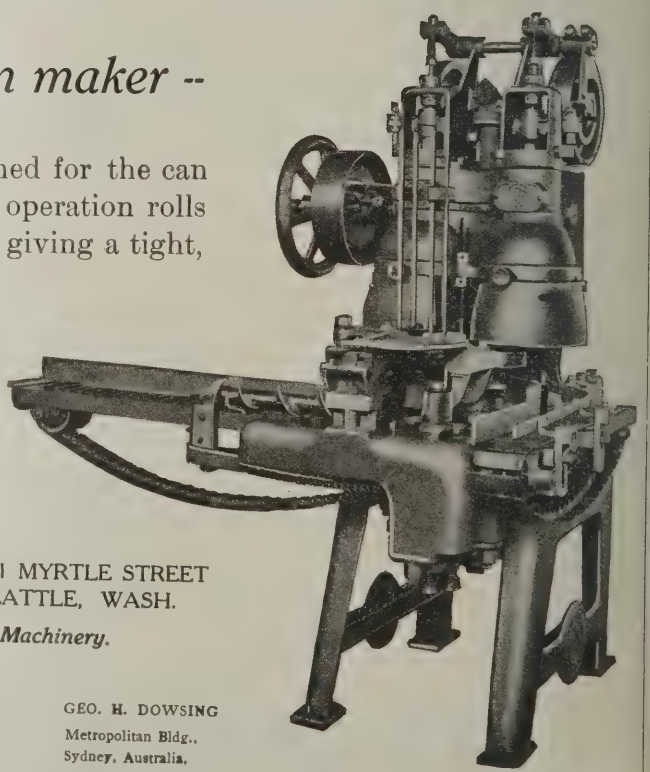
1922. In 1922 we packed eleven and a half million cases and ran so short that speculators managed to bring back over half a million cases from France and market them to advantage, thus showing a total consumption of over twelve million cases with the closest clean-up ever known by August 15th of 1923. Last year we packed 14,700,000 cases, and at present there is every indication of their being entirely cleaned up with the exception of a few 10s, and my personal opinion is that the 10s will be gone, also, by August 15th.

Now, if this does not indicate a ratio of increased consumptive demand, which it will require seventeen million cases to satisfy between August 15th of this year and August 15th of next year, it does not indicate anything; yet I am sorry to say that every indication is in the direction of a smaller pack than we had last year, probably a much smaller one.

The point which these cheap sellers of Maryland futures cannot seem to get into their heads is "Why the increase and how soon will things flop again as they did in 1919 and 1920." Of course, the increase in consumption is due to the average canned tomatoes being better than they were in 1918 and 1919. I am glad to say that the majority of the tomato canners never did realize what horrible slops some of the Maryland and Delaware canners put up in 1918 and 1919. The average yearly consumption which had amounted to thirteen and a half million cases yearly went down to around ten million cases as a result of this "consumption killing" form of packing. The anti-slop packing laws of 1920 stopped it, we hope, forever, so far as Maryland and Delaware are concerned. The only "pureed" tomatoes now being shipped to our Eastern markets are coming from California.

In 1906, when the National Pure Food Law went into effect, many tomato canners predicted dire calamity for the industry. Instead of a calamity, the fact that the average tomato canned was a "consumption builder" instead of a "consumption killer" resulted in the average annual consumption going from below seven million cases previous to 1906 up to ten million cases in a few years, and up to thirteen and a half million cases in ten years. When the State laws just mentioned went into effect in 1920, the writer, going back to the years following 1906 for his precedent, predicted an increase of consumption to twenty million cases within a few years, and if production could have been maintained at a properly increasing ratio, it now appears that we would have reached that figure in 1926. A falling down in production, such as we are sure to experience this year, may delay our reaching the twenty-million-case mark before 1927; but how can anyone, after noting carefully what has happened since 1920, doubt that we shall reach a twenty-million-case consumption by 1927, provided we first get the production.

Yours respectfully,



R. W. MESSENGER.

SLACK SEAMS - HARELIPS -

Two bug-bears of the average can maker --

The TROYER-FOX DOUBLE SEAMER, designed for the can maker, has a yielding pressure on the second operation rolls which compensates for different tin plate thickness, giving a tight, evenly rolled seam all the time.

The two First Operation Rolls tuck the curl of the lid well up under the Flange, with a positive even pressure, spinning, or ironing out the seam in a smooth straight line.

ORCHARD FRUIT CROPS PROMISE BIG YIELDS THIS YEAR IN MARYLAND AND DELAWARE, EXCEPTING MARYLAND APPLES.

By John S. Dunee.

Orchard fruit crops in Maryland, apples, excepted, give promise of bountiful yields this year. In some Maryland orchards apples are very spotted; the trees were full of bloom, but did not set fruit, pollination being hindered by the excessively wet and cool spring. A full crop of some types of apples is expected here and there on the Eastern Shore, according to Peninsula growers. Wet weather has been favorable to insects and disease in both states, and damage is reported locally from those causes. Spraying in not a few instances has proven ineffective, because of continuous rains, which growers say washed off the solution. Much scab reported. And hail worked considerable damage locally. The June drop in both states reported as heavy. In Delaware all tree-fruit prospects are much above the ten-year average for this time of year.

The apple prospect in Maryland on July 1 was about 2,119,000 bushels, against 2,300,000 last season, and 1,714,000 the average of the last five years. A commercial crop of 382,000 barrels is indicated. In Delaware the prospect is somewhat better than in Maryland. A crop of about 1,318,000 bushels is forecast, against 1,200,000 last year, and 851,000 the average of the last five years. A commercial crop of 369,000 barrels is in sight.

In both states the peach prospect July 1 was much above the ten-year average. A crop of 697,000 bushels is indicated for Maryland, against 631,000 last year. In Delaware 239,000 bushels, against 225,000 last year.

Pear production in Maryland, based on July 1 condition reports, is forecast at 373,000 bushels, against 374,000 last year. And in Delaware at 363,000 bushels, against 370,000 last year.

These forecasts allow for average influences prevailing from July 1 to harvest time.

PRICES OF CANNED AND FRESH FRUIT IN ENGLAND.

By William M. Park.

Fresh Fruit—Seedling Oranges 15 to 20s. per case of 1½ bushels. Naval oranges 20 to 30s. per case of 1½ bushels. Grape fruit 30s. per case of 1½ bushels.

The above fruit is arriving at the present time and the prices given are the current wholesale ones in Covent Garden.

Peaches—6s. to 15s. per box of about 14 lbs. 6s. applies to the poor qualities and 15s. to the extra fine. 10s. is considered an average price.

Pears—3s. 6d. to 7s. 6d. per box of 14 lbs, according to variety and condition.

Plums—6s. to 9s. per case of 14 lbs.

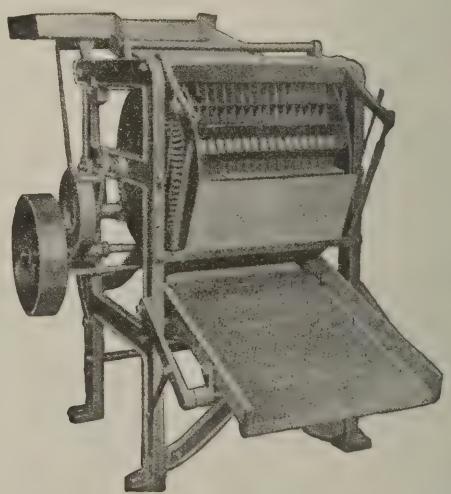
The shipments of peaches, pears and plums have practically ceased for the present season, but the above were the current wholesale prices a few weeks ago.

Canned Fruit—No. 2½ size cans.

Pears—Fancy grade, from 13s. 6d. to 14s. 9d. per doz., duty paid; choice variety, 14s. 9d. per doz., duty paid; standard, 13s. 3d. per doz., duty paid.

Pineapple—13s. 6d. per doz., duty paid.

No other canned fruit quoted.



IMPROVED STEEL PROCESS KETTLE

Manufactured to hold 800, 1,000 and 1,200 2 lb. cans. Conceded to be the best; hundreds in use. Double theremometer pocket riveted to each kettle. Constructed so as to use either water, dry steam, or open bath process

The Markets

BALTIMORE, JULY 21, 1924

WEEKLY REVIEW

Most Canners Have Withdrawn From the Market, Owing to Uncertain Crop Results—Sharp Price Advances Not Looked For — Peas Going Quickly Into Consumption — Prices Re-arranged—No. 10 Tomatoes Are Lower—The Market Strong.

KEEPING OUT—There would seem to be good evidence that the great majority of canners of corn and tomatoes have withdrawn from the market and are refusing further sales of their goods until they can see more definitely just what may be expected from crops. "Hope springs eternal in the canner's breast" might have been truly written of the canners generally, and there was never better evidence of it than what has been shown this spring, and so far this summer. Although they saw their crops, upon which they depended for their packs, hindered in the planting, hurt in the growing and ravished by bugs and insects to an unprecedented degree, nevertheless when futures were offered them—at low prices—they took just a few more orders to be on the safe side, and it must have been because they hoped, in spite of their eyes and knowledge of crops, that their packs would come through someway or somehow. Or, possibly, the hope took the form that before it was too late they would get out added acreage and be able to produce additional crops, so as to pack these goods and meet their obligations. Both of these "hopes" have been take away from them now, and so they have been forced to withdraw in self-protection.

Read the long string of crop reports we give you this week and you will see that better than 60 per cent of a normal output seems out of the question, even if weather conditions and all else prove most satisfactory from now on. While these reports are not signed as printed, many of them have been written by canners old in the business—men of experience and familiar with their business, and whose judgment and honesty are above reproach. Crops may take a complete flop to the other side, and the yields may outdo all previous records for the acreage planted, but even so—and that is the extreme of extremes—there will not be enough to make good, big packs of either corn or tomatoes. So there is no wonder the canners have withdrawn—they would be very foolish to sell further in the face of almost certain shortage. Now, the question is as to the advances—will tomatoes and corn advance, and if so, how much? The answer to this question hinges upon general business conditions annd the action of the banks. There are some indications that the slight recession in general business noticed during the past few months is passing off, and some of the authorities are saying that business improvement is setting in. Similar crop troubles in wheat have sent that product soaring on the exchanges, and other food products will feel a beneficial effect from this. From that viewpoint the situation looks hopeful, but from the banker's viewpoint it is not so easy to extract comfort. They have been holding the buyers down tight as they have been holding the canners down, causing the supply men to complain that business which was to be expected had not been placed, and the bankers will continue this tight holding until after the election, and its disturbing elements. So, although prices ought to advance, and rather sharply, there may be only moderate advances; but, on the other hand, there seems no likelihood whatever of anything like recessions.

A great many buyers would like to cover their requirements better, as they fear being caught short; but they are caught in both ways now—the inability to buy as they want through financial limitations, and the unwillingness of canners to take further orders for futures. Orders are coming in from all sections, covering all items, but particularly for the better grades of tomatoes and corn, and they are taking spots where they cannot get futures. So there is real life and strength to the market and a considerable volume of trading.

PEAS—Southern packed peas, which this season were quite good in both quality and quantity, are reported as going quickly into consumption, filling up the many vacant spots which have been waiting for canned peas. Indiana and Ohio peas come in the same class, and so the big "boys" in the pea-canning game will find that their little competitors have all been cleaned out of their way, and that they have the market in their own hands. The weather has been favorable for the pea canners of Wisconsin and New York, and they have been making the most of their opportunities. It is hoped that they have not sold up to the full on futures, so that they may have some goods to trade upon the market at the better prices. There will not be too many peas this season, but there should be fair-sized packs.

There has been a re-arrangement of pea prices this week, some higher and some lower, as you will note upon reference to our market page.

TOMATOES—The only other changes in prices this week are found in No. 10 tomatoes, which are now quoted at $4 instead of $4.15, an effort evidently being made to clean up what someone reported as a large carryover of 10s, though we expect to see this report prove overdrawn.

STRING BEANS—String beans are coming to the canners' tables in this section, but the market is so thoroughly cleaned out of this item that what can be packed will be taken as fast as packed, and the market remain hungry for more. Other sections are beginning on them, but the crop is not in good condition and the packs cannot be large. No. 2 cans of cut stringless are quoted at $1 to $1.10, whole beans at $1.20, and No. 10 stringless at $5.75.

TRUITS—Small fruits are meeting with good demand and are cleaning up in this market. In fact, all fruits are in better demand, and as the packs generally will be limited closely to futures on the books, with very little carryover, the buyers are covering their wants while they can get them. This market is said to be cleaned out of pears, and while the pine-

apple pack this season showed some improvement over former years, it has been going steadily into consumption. The Hawaiian article has met with excellent demand, and California fruits generally have been so well taken, under the now well understood conditions, that canners on the Coast have withdrawn early prices and advances are being made.

Some early peaches are coming to market, but if touched at all, they are being very lightly touched by the canners. The apple crop promises to be a good one this season, and the surplus of fresh apples in the warehouses is making apple canners careful about their procedure. Despite some experts' opinions, this does not look like a good year to go heavily into apples, unless the futures are on the books.

SPINACH—Spinach has been a prince among vegetables this season, out of the reach of ordinary mortals, and as a result the canned article rules high. No. 2 is quoted at $1.05, and No. 3 at $1.55, with No. 10s at $4.50, and based upon the cost of the fresh article there cannot be much profit for the canners even at these prices. Naturally, stocks are low. What other sections can add to this supply remains to be seen.

SAUERKRAUT—Sauerkraut rules steady at about $1 for No. 3. Sweet potatoes are all gone and are out of quotations. There is some little pumpkin left, held at $1.25 for No. 3s, and at $3.80 for No. 10s.

Mixed vegetables continue to sell and are quoted at $1 for No. 2s.

BEETS—Some new beets are offered, and the very small are quoted at $1.35 for the No. 2s, $2 for the No. 3s, and $7 for No. 10s. The crop of beets is not in good condition, having been damaged by cut worms and other troubles. The canners are improving the pack of beets and demand is following as a result.

The feature of the market is that practically all canners are withdrawn, awaiting more definite information as to crop results.

NEW YORK MARKET

The Market Stiffening—Tomato Canners Withdraw—Spots and Futures Stronger—More Fruit Business—Salmon Situation Worrying—Corn Stronger—Most Corn Canners Withdrawn on Futures—Southern Peas Going Out Rapidly—Small Pack of Berries Expected in Northwest—Michigan Berries Better—Southern Fruits.

New York, July 16, 1924.

By "New York Stater,"

Special Correspondent "The Canning Trade."

MARKET STIFFENING—Spot canned foods are available only in limited quantities, and wanted grades are at a premium in many instances. Stocks in the hands of distributors are very light, and buyers are carefully scouring the market for even very small lots of certain grades of fruits and vegetables which are most in demand from the retail trade.

Tomato Packers Withdrawn—With the outlook for the new tomato pack in the Tri-States rather unsettled, many of the packers are now withdrawn from the market, brokers along the street estimating that fully 75 per cent of the packers are now temporarily out of the market. In the meantime the market continues nominally held on new pack.

Spots Stronger—The spot tomato market is strengthening in sympathy with firmness in the futures situation. Unsold holdings of 2s at cannery points are limited to small quantities, the market ranging from $1.15 to $1.20 per dozen, f. o. b. cannery, with offerings at the inside price considerably in the minority, $1.17½ per dozen being the ruling quotation in most instances. The market for 3s is held at $1.35 to $1.40 per dozen, with possibly some to be had at $1.32½ per dozen, both prices being f. o. b. cannery.

More Fruit Business—Demand for new pack California canned fruits has shown improvement, and the packers are more optimistic. Peaches in particular have been selling well out of the new pack, and the demand for apricots is beginning to show noticeable improvement. Export buying of "cots" has been one of the features of the market during the past week. Pears continue rather quiet. Pineapple business is picking up somewhat after a slow start.

The Salmon Situation—Reports of a rather alarming nature regarding the new pack salmon situation are being received from packers in Alaska. According to some estimates, imposition of the more drastic government regulations this season will result in a cut of practically 50 per cent in the pack, with heavy losses to the canners. Despite the bullishness of these reports, however, local buyers refused to be stampeded, and there was a comparatively quiet business passing during the day. The spot situation also remained quiet, with pinks ranging $1.32½ to $1.35 per dozen, ex-warehouse. Reds held at $2.35 to $2.40 per dozen, with up to $2.45 quoted on some, especially favored brands.

Corn Strong—There is very little spot standard corn available, and the market on Southern pack for immediate shipment is held firm at $1.00 to $1.10 on full standards, with some available around 95 cents per dozen, f. o. b. country cannery. There was some buying during the week, and the market took on a stronger tone. Futures were attracting more attention as the strength of the spot market becomes more marked. Western canners are practically out of spots, holding the market around $1.10 per dozen, f. o. b. cannery, for the small lots still remaining unsold.

Fancy Maine Corn—Practically all of the canners are withdrawn from the market, as a result of the unfavorable crop outlook. The wisdom of most of the packers in booking only a moderate percentage of their expected pack early in the season is now demonstrated. Buyers who discounted talk of a strong market for fancy corn this season are now trying to "get aboard," but the packers are not willing to sell additional stocks now.

Sardines—The packing season to date has not been much to brag about in Maine, and the pack has been very much below normal. Many of the canners have not yet started packing for the season, and several have announced their intention of remaining closed throughout the season.

Southern Peas—Maryland and Delaware pea canners are about through the season's run, and have had a good demand for their pack thus far. Jobbers' stocks of peas are light, and the Southern pack is going out rapidly, not only because of the fact, but likewise due to the fact that some shipments of Southern pack this season have shown up exceptionally well as to quality. Standard Alaskas are quoted at about $1.20 to $1.25 per dozen, f. o. b. cannery, with fancy ranging all the way up to $2 50 per dozen for the No. 1 sieve.

Wisconsin Peas—The packing season is now under way in full blast in Wisconsin, and the pack of Alaskas is expected to be over by the close of next week. However, packers have sold heavily on future contracts this year, and it is not expected that packers will have much in the way of spot stocks to offer after they have filled their contracts. The early buyer of peas is certainly the lucky buyer this year, as it is somewhat of a problem for the jobber who did not contract for futures to locate sufficient stocks and assortments to take care of his season's business.

Northwestern Fruits—Reports received from canners in Washington and Oregon are generally of a bullish character. The pack of berries is expected to be small, and it is possible that deliveries of loganberries may be pro-rated. Sales of Bartlett pears have increased somewhat, but cannners are not anxious to take on additional business at this time, as the crop outlook is rather dubious. Prices have advanced 10 to 15 cents per dozen since the opening was announced. Canners in the Northwest still have some stocks of 1923 solid pack apples which they are quoting at $4.25 per dozen, f. o. b. cannery.

Michigan Blueberries—Michigan blueberries are becoming more of a competitor with the Maine pack, annd this year the Wolverine State is ahead of Maine in announcing opening prices. Quotations received here for new pack Michigan blueberries list offerings as follows: 2s in water, $2.10; 10s, $9.50; 2s in 20-degree syrup, $2.40, and 40-degree syrup, $2.60 per dozen, f. o. b. cannery. Michigan packers are now working on their season's run of strawberries and cherries, a good advance business having been done in both. Canners are being forced to pay the growers more than they had anticipated on fruits this year, however, due to the fact that short crops have given the growers complete control of the market in many localities.

Southern Fruits—Southern packers are offering new strawberries at $1.10 for No. 1 preserved and $2.00 for 2s. In 20-degree syrup, 1s are quoted at $1.15; 30-degree syrup, $1.25, and 40-degree syrup, $1.35. Fod No. 2s, in 20-degree syrup, the market is $2.10; $2.25 for 30-degree syrup, and $2.35 for 40-degree syrup. Future pears are quoted at $1.20 for 2s extra standard, $1.70 for 3s extra standard, and $6.25 for 10s extra standard. The market for Baltimore-packed pineapple is rather unsettled, due to frequent fluctuations in the fresh pineapple market, which govern canners' costs.

Trade Notes—The Wall Street Journal, in a San Francisco dispatch, says: "Merger of the Growers' Association of Southern

California with the California Co-operative Canneries makes the latter the second largest canning company in the State, acquiring five plants. It will operate only two this year because of the short Southern crops. It has also leased the San Benito Co.'s plant at Hollister after contracting for big acreage of tomatoes and apricots."

Crosse & Blackwell brand of British Columbia fancy sockeye salmon is being offered in the local market for the first time. H. F. Baker is American representative for this well-known packing concern.

William Hills, Jr., & Co., which has taken over the interests of Butler & Sergeant, Inc., in this market, expect to move to new quarters, at 110 Hudson street, in the immediate future.

Temple Smith, of the Smith-Frank Packing Co., of Sacramento, has returned to California after visiting Bridges & Timpson, his local brokers.

CHICAGO MARKET

Spots So Scarce Market Is Quiet—Alaska Peas About Through and Beginning on Sweets—Iowa Gets Into the Pea Game —Indiana Packs Fine Quality of Peas This Year —Spot Tomatoes About Exhausted—Spot Corn About Gone—Future Corn Sales Heavy—Death of Harry Sloan.

Chicago, July 18, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

QUIET—General conditions in relation to canned foods are quiescent in the Central West at present in regard to spot goods. The special reason is that there are no spot goods in first hands, and the wholesalers who own any spot canned foods do not want to dispose of them in a jobbing way, as they need them for the requirements of their retail trade.

Consequently, the brokers are restricted to negotiations for canned foods of the 1924 pack. But, fortunately, the receipts of the new pack for 1924 are near at hand, and new canned peas are now arriving.

Canned Peas—Brokers who have just returned from Southern Wisconsin report that the Alaska or June peas are now being shipped and that the canning of the early crop will be over by the middle of next week in the southern part of Wisconsin.

In Northern Wisconsin, however, the packing has just begun, and shipments will not be ready until later. Southern Wisconsin will begin packing sweet peas or the late crop about the 25th of July, or possibly a day or two sooner.

Something new in canned peas has developed this season, a carload of the 1924 pack having arrived in Chicago from the Marshall Canning Co., Marshalltown, Iowa. The peas are said by brokers and buyers to be of excellent quality, fully equal in every respect to Wisconsin pack peas.

The packing of peas in Iowa began experimentally last year, and I understand that about 6,000 cases were packed by the Marshall Canning Co. which proved to be of fine quality, and that concern then concluded to pack canned peas more extensively this year, and did so. I understand they packed about 60,000 cases, and the sample carload which has arrived in Chicago proves that the effort has been quite successful. The climatic conditions in Northern and Central Iowa are about the same as those in Southern Wisconsin, and are suitable for the growth of fine peas. The lake conditions which prevail in Wisconsin on account of the number of lakes in that State are absent in Iowa, but they have in that State a number of fine rivers, including the Mississippi and others, which lend to the climate the essential moisture and coolness required for the growth of good peas.

It is quite probable that the success of the Marshall Canning Co. will encourage other canners in Iowa to embark in the production of canned peas.

It is learned that the packing of peas in Indiana is entirely finished, and from samples of the deliveries to Chicago, the pack has been of excellent quality. The pack of peas in Northern Illinois is well under way, and I understand that the quality this season is excellent.

Shipments of new peas of the 1924 pack will be arriving on the market now regularly, and the scarcity which prevailed of desirable grades, or, in fact, of all grades, will be relieved.

Canned Tomatoes—The stock of tomatoes in the hands of wholesalers in the Central West is about exhausted, and they are impatiently waiting for the new pack to be put into cans and shipped to Chicago and elsewhere. The buying of futures in canned tomatoes has been considerably larger than last year, and I understand that Indiana is sold out very closely to prospective capacity.

The passing of the No. 3 can of tomatoes, as well as the No. 2½ can, is a matter of interest not only to canners and dealers, but to can manufacturers.

It has been argued that the reason for the transference of the buying by consumers almost entirely to the No. 2 size is that the No. 3 can and the No. 2½ can are too large for ordinary-sized family use.

This, however, is a mistake. The No. 3 can and the No. 2½ can sold in preference to the No. 2 can almost 3 to 1 as long as the prices of the larger size cans were acceptable to consumers, but when the price rose so that larger cans had to be retailed at 15c to 20c, chiefly for 20s, buying was diverted to the No. 2 can, which was retailed generally at 10c and never over 15c, as is now the case. It is a matter of comparative price and not of unsuitable size which has caused the change of buying to the No. 2 can. It seems impossible to educate the consuming public of the United States to buy canned foods or anything else by the penny change system, and though dealers may do their utmost to establish the penny change system, consumers are prejudiced against it and want to buy goods for a nickel or dime and do not usually care to split nickels except for newspapers on the stands. They are even opposed to splitting nickels for street car fare, and would, I think, in many instances prefer to pay 10c rather than 7c or 8c to the conductor and save the bother and trouble of making change and carrying pennies in their clothes. This, I think, is the reason that has diverted the buying to the No. 2 can of tomatoes.

Canned Corn—Spot canned corn is practically cleaned up, and all desirable lots of 1923 pack are closed out. Canners have taken courage and hold the pack of 1924 standard No. 2 canned corn generally to $1.00 per doezn f. o. b. cannery, though an occasional lot can be bought at 95c from some canners who have not sold many futures.

Iowa and Nebraska have sold for future delivery of the 1924 pack about 2,400,000 cases, as opposed to about 1,400,000 cases at this time last year, and some think that those two States have sold futures up to their probable producing capacity because a large quantity of the increased acreage planted this year had to be abandoned on account of wet weather and the late spring and replanted in other crops, and the corn crop for canning purposes especially suffered from weather conditions, and the yield will probably not be heavy.

The Agriculture Department of the United States gives the crop conditions of corn in Iowa for 1924 as 72 per cent, contrasted with the 10-year average of 90 per cent. This estimate was of date July 1, 1924.

The writer recently made a trip through Wisconsin from the southern to the northern line in the daytime, and noticed the condition of the corn crop all along the route. Corn crop in that State is very backward. The plants are quite small, although they look healthy, and unless overtaken by early frosts will make a good yield. But the crop is late, very late.

The crop of black bass, pike, perch and maskalonge in Northern Wisconsin was also late this year in spawning, but that business is now over with them, and they are biting freely. I caught the legal limit every day while I was on my vacation.

The weather for crop purposes in the Central West and the Great Lakes Region is at present very fine—warm, but not too warm, and with occasional rains for the purpose of assisting the rapid growth of all crops. The wet condition of the soil all throughout the Central West has prevented the cultivation of the crops after they were planted until lately, when the soil has dried out to some extent.

The brokers and buyers of this market were distressed to hear of the death of Frank Aplin in New York last week. He was for many years located in Chicago as general manager of the canned foods department for Franklin MacVeagh & Co., and later as general manager of the office of the J. K. Armsby Co. He was a man of splendid character and had many ward friends in Chicago.

The news has just arrived, too, that Harry Sloan, Secretary of the Missouri and Kansas Wholesale Grocers' Association, died rather suddenly at Kansas City, Mo., July 15, 1924. He was one of the well-known and well-liked men in the wholesale grocery business and was regarded as one of the wisest men in that line.

His experience had been practical, as he was manager of one of the wholesale houses of the Western Grocery Co., at Marshalltown, Iowa., for a number of years before taking the position of Secretary of the Missouri and Kansas Wholesale Grocery Association.

He was a fine writer and excellent public speaker, and one of the most affable and friendly men in the wholesale grocery business in the United States. He had thousands of friends, and his death will be very much deplored by those in the wholesale grocery line and kindred lines throughout the United States.

ST. LOUIS MARKET

Men With Vision Buying Futures, Conservatives Holding Off—Small Output of Tomatoes Inducted—New Peas Being Distributed—Southern Peas Selling Well—Corn Canners Are Not Offering Goods—The Fruit Stocks Are Clean Down.

St. Louis, July 17, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

VACATION DAYS—Local trading has been more or less curtailed during the past week. Many of the buyers for the largest distributing houses are away on their vacations, and those left in charge continue to make purchases on a hand-to-hand basis. There has been, however, a fair demand for futures, the movement having started several weeks ago, when the prospects for peace were uncertain. Conservatives, however, prefer to wait for a while in order to see how the crops will develop. A decided broadening in the volume of spot as well as future deliveries has been noticed in the vegetable line particularly.

Tomatoes—Canners in the Tri-States report the outlook as very unsatisfactory for the coming pack. Much replanting was necessitated, owing to the cold, damp weather and backward spring. Then, to replace the vines, there was a big demand for plants. The shortage of plants in Indiana and other Middle States took a big supply from the South. The result shows a smaller planting than was anticipated.

Peas—There is no special excitement at present in peas. The market is in good shape because new packs are coming in to the distributors in larger volume than usual. Then, too, Southern peas have been of unusually good quality and have caused repeated orders. That section has had one of the best selling seasons in several years. Packers in Wisconsin are waiting until their canning season has been completed before they care to seek additional outlets. They will probably represent a greater volume on the new pack, as there has been an increased acreage this year and a number of new canneries are operating.

Corn—The corn crop is not doing well. The result is that there will be short packs in the various Middle Western States. The crop has been backward, owing to weather conditions. This will influence futures, because of the output and quality. Packers are not offering their packs until they know better how they will fare on their business already contracted for. In fact, canners are worrying. Rather than book business they cannot fill, they are not open for contracts in many instances. This makes all futures firmly held. Spots are selling in fair volume, mostly standards. Extra standards are being used when fancy cannot be obtained.

Miscellaneous — Minor vegetables are showing no radical changes. Stringless beans are being packed in the South, and early deliveries will soon relieve the shortage. Beets and other early packs have found a ready market, due to the depletion of spot stock.

Fruits—Because of the near depletion of spot stocks, life has been given to the future market. California is being closely watched. Prices of fresh fruits, which have been bringing advanced prices, are continuing to go up, and the independents will probably advance their prices as the season advances. New packs are being purchased more freely. Peaches have been well taken, particularly in the lower grades beginning with standards. The quality of the crop, however, would indicate that there will be greater quantities of standards and second pack this season. Apricots, pears and berries likewise have had a good call. The fact that fruit has been high restricted packing to a degree. Spot fruits on the coast and in distributing markets are down to a small compass and comprise, for the most part, grades that have not been found satisfactory. It is indicated that shortage in a good many items will serve to stabilize prices for some time to come.

According to estimates made by the supervisor of marketing of the St. Louis-San Frisco Railway—Frisco Lines—and just released, 609 cars of peaches will be shipped this season over the Frisco Lines from Ozark territory.

These shipments will be divided as follows: 383 cars over the Central Division, from Oklahoma and Arkansas points; 31 cars over the Southwestern Division, in Oklahoma, and 195 cars over the Southern Division, principally in Missouri, with 3 cars from the river division at Cape Girardeau.

The movement of peaches south of Fort Smith will begin on July 20 on the Southwestern and Van Buren-Rudy districts about August 1, from the Springfield-Rogers district about August 5, and from the Brandsville-Koshkonong district about August 6.

Peaches raised in the Ozarks this year are of unusually good appearance, and it is expected will have a splendid flavor.

CALIFORNIA MARKET

Advances Over Opening Prices—Others Expected—Heavy Demand for Pineapple—Crushed Pineapple Is in Good Demand—Fish Is Also in Good Demand—Coast Notes of Interest.

San Francisco, July 17, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

PRICES ADVANCING—The advannce in the price of Californina canned fruits which have been expected by the trade ever since the announcement of opening prices last month have taken place, several of the large operators having revised their lists. In no instances have the increases been especially heavy, but they have been quite general through the list and tend to dispel any illusions that anyone might have of prices becoming weaker or of being maintained at the opening level. The California Packing Corporation puts out its new list under the significant title of "First Advance 1924 Prices," and others are expected before the year is at an end. This firm is still offering apples, cherries and plums at opening prices, but advances have been made in apricots, peaches and pears. Most of the increases in the No. 2½ size are 5 and 10 cents a dozen, but in the case of water pears an advance of 25 cents a dozen has been made. Buying has been quite brisk of late, and it is not expected that the new prices will have much of an effect on the demand. Opening prices ran an unusually wide range this year, some interests naming higher prices than the California Packing Corporation, and others cutting below the list of this concern, but values are rapidly becoming stabilized. Canners have about completed their purchases of fruit and operating costs are quite definitely known.

Pineapple—An interesting feature of business this year has been the very heavy early demand for Hawaiian pineapple. The opening prices seemed to strike the fancy of the trade and orders have been confirmed quite freely, with many buyers already supplementing their early selection with re-orders. Crushed pineapple, which was moved with difficulty a couple of seasons ago, is in special demand, and the outlook is that sufficient of this cannot be packed to meet the call for it. Already packers are scanning orders and cutting down on some which run too strongly to crushed. So far there have been no advances made in the price of this fruit, but with such a heavy demand materializing and with prices increasing on California fruits, it would occasion no surprise if advances were made on pineapple. Packing operations are in full swing on the Islands, and two large shipments of new pack fruit have already been received at San Francisco, the second one being 90,558 cases, which arrived on the Manoa on July 9. Every indication is for a pack of about 6,000,000 cases.

Fish—A noticeable increase has been noted of late in spot canned fish, the entire list being in good demand. Pink salmon is being held quite firmly, and there is a fair call for reds, with stocks getting down to low compass. Goods of the new season's pack are commencing to arrive from Alaska, but it will be well along in August before the salmon fleet will turn southward. Opening prices are not expected until packing operations near completion. There is a good call for tuna and sardines, the latter enjoying a good export demand.

Asparagus—The California Packing Corporation recently brought its asparagus canning season to a close, and an output of approximately 290,000 cases is reported from the Rio Vista plant alone. It is believed that this is the greatest pack of this vegetable ever made in any cannery. Sales of asparagus have been heavy ever since the announcement of opening prices in the spring, and many grades are closely sold up, despite the large pack.

Coast Notes—Three million dollars have been expended in the fig-growing industry in the vicinity of Stockton, Cal., during the past few years, and a very large increase in the output of canned figs is expected in the near future. Up to the present time the demand for canned figs has been greater than the supply, but growers and canners are commencing to make plans for a campaign of publicity to popularize the fruit. The Beechnut Company is understood to be preparing to erect a fig-canning plant at Stockton, and other concerns are considering entering the field there. That city enjoys exceptional advantages for plants of this kind, being in the heart of a rich farming community and enjoying both water and rail transportation.

Maurice O'Brien, a representative of the New Zealand Board of Trade, recently paid a visit to California canning plants, and pronounced them models of sanitation. He stated that he would be able to make a report to his government that the people of New Zealand need have no fear About California's packed products, since packing methods here can scarcely be improved upon.

Commercial aspects of canning fruits and vegetable products form the subject of a volume just off the press, the work of Prof. W. V. Cruess, associate professor of fruit products at the University of California. Among the subjects discussed in the volume, which is entitled "Commercial Fruit and Vegetable Products," are the commercial canning of fruits and vegetables, the manufacture of fruit juice and the sun-drying and dehydration of fruits. Professor Cruess has made an intensive study of the utilization of fruit by-products, and returned recently from a trip to Europe, where he made observations along this line.

Harry Smith, city food inspector of Oakland, Cal., has made an announcement to the effect that the department of which he is the head is ready to test canned foods for housewives free of charge. He states that with the advent of warm weather there is always a question in the minds of some about the quality of canned foods on hand, and that the service is offered to allay the fears that any may have.

A serious shortage of electric power is being experienced in Southern California, and many industrial plants are being closed. Canneries, however, are exempted from the rulings of the lower conservation bodies, although every effort is being made even in these to use as little power as possible. A very light pack of fruits and vegetables will be made there this season as a result of the disastrous drought.

William T. Holling, secretary of Tillman & Bendel, San Francisco, Cal., recently fell into the elevator shaft at the warerooms of this concern and broke both his ankles.

MAINE MARKET

Canning Begins—Pea Canners Busy—Beans Look Well—Blueberries Also Ready—Shipping Blueberries for Fresh Market Trade—Corn Is Looking Well—Sardines Continue Scarce.

Portland, Me., July 18, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

CANNING BEGINS—July is the beginning of the Maine vegetable canning season, with peas already under way, and stringless beans coming on within ten days. From now until October 1st the canneries will be busy with the succession of crops to be handled.

The pea-canning factories are now operating on early varieties, and find promise of a good season. There is no longer any question about the feasibility of pea canning in Maine, and the industry is due to grow within the next few years.

Stringless beans look very well, indeed, although the acreage was somewhat curtailed by the bad weather at planting. The present crop has come along fast in the last fortnight of good weather, and canning will doubtless begin about the 28th.

Blueberries are also about ready for the can. The yield this year seems to be excellent in quality, although Washington county reports a lack in quantity. There is also an increased demand for hand-picked berries for basket trade in New York and Philadelphia, and this will cut down the acreage available for factory use. Prices on new goods will doubtless be named when the canning begins and factory costs become stabilized.

Corn looks well. After many months of untoward weather, we have had a fortnight of hot days and warm nights, with occasional showers, and the standing crop at present is reassuring. Even now future contracts are hard to find, and buyers are looking for any chance to "get in."

Sardines are in the same position as previously quoted. Fish are still scarce, several factories are not operating at all, and none are having a capacity business. The stringency was somewhat relieved by the removal of the tariff on Canadian fish. The market remains quiet, but is expected to liven up next month.

WHAT THE BROKERS SAY

Wausau, Wis., July 12, 1924.

This pea pack promises to be much like the Chinaman's description of a toboggan slide—"Zip, walk a mile." A week ago few canners had started. By the time you receive this letter some will have finished their Alaska pack. Others are just nicely started, and a few will not commence packing until next week.

While we have had no hot weather, it has been considerably warmer during the past week—enough so that it is maturing the peas very rapidly, thereby taxing the capacity of many of the canners. So far the yield has been normal, at least, and the quality not so good. Take our word for it: FANCY PEAS ARE A GOOD BUY. They certainly will be no cheaper, and may be unobtainable after the pack is over.

GROCERS' SUPPLY COMPANY.

Indianapolis, Ind., July 12, 1924.

The Indiana pea pack is over, and while the quality, we think, has been excellent, far above the average, it has been quite erratic. The yield ran from 50 cases to 90 cases per acre, and, as stated in our advice of Wednesday, there was a very small percentage of the larger sieves packed. We know of one large packer who, we understood, packed but 20 per cent of the 4 sieve Alaskas he had sold future. This is an old-time packer, who is regarded as conservative, but he had a very short pack, and what he did receive ran practically all to 2 sieve and 3 sieve. One day this week his viners ran for 8 hours before he could accumulate enough peas in his tanks to start his canning operation. The viners were busy thrashing vines, but there were very few peas on same.

Green bean pack has started in Indiana, and the quality is better than we have ever seen it. The weather we have had to date has been excellent for the growing of beans in some sections, and we are more than pleased with the quality of the samples we have cut to date.

Some few canners have continued to plant corn. They have small hopes, however, of having it mature and getting it in cans.

The corn situation continues to become more serious each day.

Tomatoes are problematical. In some sections of the State there are some green tomatoes on the vines. In other sections the vines are stunted and hardly 8 inches tall. Our advices from the East show that the Tri-States must be in very bad shape as far as their tomato prospects are concerned. On account of the cold, wet and late season, and the insects, which have flourished, and the appearance of wilt to quite an extent, from what we understand, they will have a very short crop.

Fortunately, tomato vines in Indiana are in a healthy condition, and we have seen no development of disease. Some tomato fields, like most corn fields, are sadly in need of cultivation, which has been retarded on account of the ground being too wet. BERT C. KEITHLY COMPANY.

The Horse Mackerel Has Finally Attracted Attention in Norway.

From American Consul Maurice C. Pierce.

THE tunny fish (thunnus vulgaris), which, according to the dictionary, is known in America as "horse mackerel," has at last attracted the attion of the Norwegian canning industry.

A traveler along the Norwegian coast during the months of July, August and September will often be attracted by a sudden and violent transformation on the surface of the sea. When not even a ripple is in sight on the calm waters of the fjords, waves suddenly splash forth as though stirred up by an unforseen surprise storm. This phenomena is, howover, only a display staged by large schools of tunny fish, which churn the surface waters in pursuit of food.

Norwegian fishermen have heretofore paid little attention to this display on the part of the horse mackerel, and, aside from the small number used for household purposes and an occasional supply sold fresh on the Bergen market, no use has been found for this variety of fish, while in other countries, particularly in Italy and the United States, it is considered a great delicacy when salted or canned.

It now appears that the antics of the tunny fish in Norway have finally attracted sufficient attention to gain for itself recognition as a choice embellishment for the dinner plate. The Norwegian canning industry, in acknowledgment of this fact, is making preparations for putting the product into tins destined in particular for sale in the United States.

Mr. Haagensen, who is manager of several fish canneries and tin plate factories in Trondhjem and Christiansund N., has decided to start this industry as soon as the tunny fish appear this season, and several Italian canning experts have already arrived to assist in the work.

SMILE AWHILE

GANGWAY!

A colored citizen who had been unwisely exploring foreign chicken coops heard that the sheriff was aiming in his direction. Hastily he sought the railroad station and asked the agent to give him a ticket to the end of the line on the fastest train.

"Our fastest train left just ten minutes ago," replied the agent.

"Well," gasped the would-be tourist, "jes' gimme de ticket an' p'int out de track!"

POT SHOT

"This is my friend Fliggles, whom I brought to take pot luck with us," beamed George W. Househub.

He was speaking, however, not to the Mrs., but to the assembled banditti of the Jacks-to-Open Gang.

THE WAY OF IT

Voter—Congratulations. You certainly made yourself clear on the liquor question.

Politician (startled)—Did I?

"You sure did, sir."

"Heavens! What a blunder!"

A HORSE, A HORSE!

"Where can a stranger get a drink around here?" asked a visitor of a native in an Alabama town.

"Go to that drug store, wink one eye and ask for a bottle of horse liniment."

In a few moments the stranger was back.

"That druggist said," he complained, "that bein' as I wasn't driving nothing but a mule and wasn't known here, I'd have to get a prescription. Where can a feller borry a horse for a few minutes?"

BENEFICIAL

M. D.—I advised you to drink cider. Has it done you any good?

Victim—It sure has. I bought a cask of the hard kind, and a week ago I could hardly move it. Now, however, I can lift it quite easily.

INCRIMINATING

Jones—My wife found a blonde hair on my coat.

Browne—Well, isn't hers blonde?

"Yes, but this was half an inch longer than her bob."

HERE'S ONE YOU'VE NEVER HEARD

Employer—I've decided to give you a raise and make you a member of the firm.

Employee—In that case, nix on the raise. As a member of the firm I'm opposed to increasing our expenses.

A SPECIALIST

Teacher—You'll have to stay in after school and work on your geography lesson. You didn't locate a single one of the cities.

Willie—I can't locate them, but I know how to tune in on the whole blame lot.

A MERE TIFF

Razz—So your courting of Miss Pippin isn't progressing in a satisfactory manner? Have you had a lovers' quarrel yet?

Bury—We started to, but the police interfered.

INTO TEMPTATION

Preacher—Sorry, but I'll have to return this second-hand car I bought.

Auto Agent—What's the matter with it?

Preacher—We-e-ell, I don't want to say—but I can't keep it and stay in the ministry.

BUDDIES

"Lady," implored the disreputable-looking tramp, "I haven't had enough food this week to keep a cootie alive."

Well," she snapped, "let 'em starve!"

EDITORIALS

VAGARIES OF THE SEASON—As our readers must have noted the response to our request for crop reports and information has been unusually generous—simply fine—and we not only appreciate this, but we know that all the industry does. The real value, of course, is in the exactness of the reports, and the date when made, as well as the particular section covered. Because the season is and has been most erratic, and therefore these important features take on added importance.

As we write we have real corn weather—hot both nights and days—and with enough moisture to help out, a condition that seems to cover most of the heavy corn-growing regions. It is the first real corn weather we have had, when corn can be heard to crack in the growing, and it will greatly benefit the corn that is out and growing; it will not, however, add one acre to the crop. Corn has been in dire need of this kind of treatment by our good, old faithful Dame Nature. Tomatoes may be said to profit by the same condition also, though possibly not as much as corn.

All of us have been impressed with the backwardness of the season, with the difficulties with which growers were able to get out their plantings, and with the unusual visitation of bugs and other parasites, which severely hurt most crops. Casual inquiry among men who should know crop conditions elicits the reply that prospects for tomatoes and corn can hardly be placed above 60% of normal. For a while it looked as if this same thing would be true of peas, and as regards stringless beans, as they are generally termed now, the situation seemed to be even worse.

And yet this week we publish the estimate of the crop of canning peas and snap beans, as the Government terms them, made by the U. S. Bureau of Agricultural Economics, and it is such as to make one think. For instance, last year's average yield per acre on peas was .8 tons on an acreage of 189,310, with a production of 159,900 tons. This season, despite all the drawbacks about which we have heard so much, this same bureau estimates the yield at 1.10 tons per acre, an increase in yield of .3 tons per acre, and the total acreage is given as 214,960 acres, with the yield forecasted at 233,300 tons. The force of men who gather in these figures are disinterested and supposedly experts, and it begins to look as if the results of the pea pack would prove them very near correct; but the result is certainly very different from earlier indications. You would be as wrong to brand the Government experts as "crazy" as you would be to say the earlier reports from growers and canners were dishonest. It merely presents a concrete example of how difficult it is to forecast nature with any accuracy, even under the most honest attempts.

But as bad as it appears with peas, it seems to be even worse with regard to snap beans. Last year (1923) the average yield on this crop was 2.1 tons per acre; the acreage is 15,460 and the production 32,600 tons. In 1924 the acreage is given as 20,040, the indicated yield as 2.6 tons and the production forecast as 52,900 tons. We can readily understand the increased acreage, because many firms took on string beans either in added amounts this season or as new lines; but under the conditions which this crop was compelled to labor this spring and early summer it seems strange to expect an average yield of .5 increase over last season. Just another of those peculiar vagaries which put the would-be prophets in a very uncomfortable position, and make wise men keep away from anything like a crop prediction. And yet it is absolutely necessary to forecast crop prospects that the industry may have some guide to go by. All that one can do is to do what we have done, and that is present the conditions as they appear at the time. It was such an eventuality as this that we referred to, recently, in regard to tomatoes, when we refused to predict the outcome, and told our readers that if they wished to prophesy they could do so, but that we begged to be excused. Will these conditions in peas and snap beans be repeated in corn and tomatoes? The man who would sell corn or tomatoes against such a certainty would deserve to lose his proverbial "shirt." We Americans are as fickle as a weather vane; we are down in the depths of despair over crop conditions one day, and then, with the advent of good weather, we flop clear over to the other side of over-expectancy or pessimism as to excessive crop yields.

What should a canner do in such a condition? Try to be prepared for whatever may happen, but always, and under all conditions, determine to make a quality pack, and see that there can be no slip in this, be the total what it may. If you have a quality pack, and the total is small, you will get more money for the goods; and if the packs prove large, you will market your goods at better prices and with less trouble if they are quality goods.

FRUIT GOING TO WASTE—Elsewhere in this issue you will find the newspaper account of the peach growers of Georgia throwing into the rivers four million bushels of peaches because the picking and marketing charges are about three times what they can sell them for. Out on the Pacific coast additional fruit trees just coming into bearing have about swamped the entire fruit market there, and it has been but a few days ago that we read an account of apple growing in this country in which the author said that we faced the necessity of destroying about one million apple trees in this country, as we now have too many of them!

A thought of this kind gives us pause; in fact, it leaves us in a whirl. It seems to us it was only a few years ago when some growers, who were reported as having destroyed their crops in order to maintain market prices, that our people rose up and demanded summary punishment for the destruction of food while so many were crying for it. It must be a crime to destroy good food while so many want it and cannot get it because it is too expensive and out of their reach, a hideous crime to throw back into the face of Nature the bounteous crops she has given mankind. There must be something fundamentally wrong where such a thing is permitted. In our boyhood we were told that "wilful waste makes woeful want," but now mankind seems to have so changed in his nature that he sees such wilful waste without uttering a single word of protest; in fact, the public sanctions it—and why? All for a profit. The one, all-important, single-good in life now seems to be the dollar.

We have been told that the apple warehouses are filled with last year's crop of apples; and yet the people have almost forgotten how to eat fresh apples because they are so high in price! You can't go to the market stall or green grocer and buy apples for less than $1 per peck. And here is another great crop of apples coming in on these hordes. What are they going to do with them? Would it not be better to open those warehouses and sell out this horded stock at low prices and get them out of the way of the new crop? To teach people once more to eat apples, and not at 5c and 10c apiece, but at 5c and 10c the quarter peck.

When we wanted some of this glut of peaches we found we had to pay from 35c to 50c for a small box of these early and rather inferior peaches. Yet the article says they are selling in the wholesale market at 40c per carrier of eight such boxes! The California growers rush East whole trainloads of fine fruit, which they sell at an actual loss, yet when wanted here in the East it takes a king's ransom to buy this fruit. The fruit growers have in their hands the greatest advertising opportunity ever afforded to put samples of their goods in consumers' hands at very low prices, but the men in between these growers and the consumers refuse to cut their profits by so much as a penny; they must have their pound of flesh even if the fruit growers go bankrupt and the consumers go without fruit. There is a warning in this situation which our country must face; it is a double-edged sword that cuts both ways. There is a right answer, and it will be found. The man who produces food is entitled to a profit before the middle-men or any others, and as sure as water will find its level the food producers will arrange to get it.

CANNED FOODS WEEK COMMITTEE NAMED IN PRINCIPAL MARKETS.

WITH the naming of local committees in over two hundred of the country's principal markets, the organization of Canned Foods Week, November 8-15, is well under way. These committees are being appointed by chairman selected by the wholesale grocers associations and the National Food Brokers Association. Leslie Lieber, of the Haas-Lieber Grocery Company, St. Louis, is acting for the National Wholesale Grocers Association; T. G. Perfect, of the Huntington Grocery Company, Huntington, Indiana, for the American Wholesale Grocers Association, and P. J. Murphy, of Deming & Gould, Chicago, for the National Food Brokers Association.

Provision has already been made for materials necessary to the campaign and for national advertising. A contract has been let for 30,000 muslin streamers for outdoor use on trucks and delivery wagons, and 600,000 four-color posters are being lithographed for use in windows and other indoor displays. One and two-color electros reproducing the now familiar Canned Foods Week streamer will soon be available to the local committee, along with attractive stickers.

A double-page advertisement of Canned Foods Week, in colors, will appear in the Saturday Evening Post for November 8, reprints of which will be available in advance of publication for use by canners and wholesale grocers. In addition, national advertisers of canned foods will co-operate by mentioning Canned Foods Week in their advertisements, while there will be an unusually large volume of local advertising arranged through the local committees.

Co-operating in the organization of the campaign are the American Wholesale Grocers Association, the National Wholesale Grocers Association, National Association of Retail Grocers, National Chain Store Grocers Association, National Food Brokers Association, Canning Machinery and Supplies Association, Glass Container Association, and the National Canners Association. In addition to these, state canners associations, state and local retail grocers associations and kindred associations will be invited to assist the local committees in making Canned Foods Week a success in their respective districts.

The National Committee is headed by James A. Anderson, Morgan, Utah, and members of the committee include H. P. Strasbaugh, Aberdeen, Md.; W. G. Glascoff, Waupun, Wis.; F. A. Harding, Boston, Mass.; E .G. McDougall, Chicago, Ill.; Merritt Greene, Marshalltown, Ia.; Roy Irone, Clyde, Ohio; H. L. Herrington, Ogden, Utah; W. E. Loucks, San Francisco, Ca.

Copper Steam Jacketed Kettles

Our Kettles stand the test of service and time. Made of heavy plate by expert smiths. The result is a product with a reputation.

Made in all sizes from 5 gallons up. In any style or shape to suit the most exacting demands.

The Visco Filling Machine

Our list of mustard packers using this machine is practically a list of the large mustard manufacturers of this country.

The Visco is a high-speed machine that fills with uncanny and unvarying accuracy, without drip, waste or mess of any kind at any time.

Its great simplicity makes possible accurate adjustments for different size containers in a few minutes.

Its perfect design and construction are evidenced by the fact that the first machines furnished some eight years ago are still in daily use.

This same machine fills jelly, apple butter, salad dressing, honey, etc. in an equally satisfactory manner.

Choose Sprays Carefully

By H. F. Wilson and C. L. Fluke
of the University of Wisconsin, Madison

(*Continued from last Week.*)

Calcium Arsenate Grows More Popular—Calcium arsenate is a material which has received some attention from time to time, and a few early experiments in which it was used seemed to show that it was not a desirable spray because of its tendency to cause spray injury to tender plants. More recent investigations have shown, however, that there are several forms of this material similar to those of arsenate of lead, and that one of these can be used on the foliage of plants with comparative safety when small amounts of lime are added.

According to market quotations it is cheaper than any of the other insecticides, and it can probably be manufactured and sold at a still lower price than at present. In this case it should prove a very desirable substitute for the other poisons against certain insects. It remains in suspension nearly as well as hydrogen lead arsenate, and it sticks equally as well under unfavorable weather conditions. It is now being manufactured in large quantities by insecticide dealers, so that growers should have no difficulty in securing the amounts needed. This spray undoubtedly has a place among our insecticides, and should be widely used in the future.

Sprays Are Used in Varying Amounts.

Paris Green—If paris green is to be used for the potato beetle, it is not necessary to use more than 2 or 3 pounds to 50 gallons of water, or, stated in terms of acres, 4 to 6 pounds an acre. In cases where the amounts do not prove efficient, poor results are due either to improper or to a poor grade of material.

Arsenate of Lead—This material comes in both paste and powdered form. The paste should be used twice as strong as the powder. For Colorado potato beetle use 2 to 2½ pounds of the powder to every 50 gallons of water or of Bordeaux mixture, if the latter is used for the leaf hopper or in disease control. This amount should cover about one-half acre. For codling moth and leaf-feeding insects on fruit trees, use 1 pound of the powder or two pounds of the paste to 50 gallons of water. For cabbage worms and other chewing insects on cabbage plants, use 1 pound to 50 gallons of water and add 1 pound of laundry soap to make it spread and stick to the foliage.

Arsenite of Zinc—Arsenite of zinc is sold either as a paste or powder, or as a paste combined with bordeaux and known as zinc bordeaux paste. For the Colorado potato beetle use 2 pounds of powder or 4 pounds of paste to each 50 gallons of water or bordeaux mixture. Directions for using the zinc bordeaux paste are given on the package.

Calcium Arsenate—Calcium arsenate may be used in the same proportions as arsenate of lead, but hydrated lime or unslaked lime is added in equal amounts to prevent burning. When the lime is added it should be slaked in a small amount of water and poured into the spray tank before application. Calcium carbonate or air-slaked lime should not be used. The lime is not necessary when spraying potatoes.

Stirring Important in Spraying—The rapidity with which a poison settles in the spray tank is of extreme importance because one of the difficulties of spraying is met with in getting a uniform spread of the poison over the plants. The five jars each contain the same amount of water by volume and the same amount of poison by weight. The poison was poured into all five jars at the same time and the contents were immediately shaken; the second, third and fourth jars were shaken at the same time and the first and fifth a few seconds later.

The first photograph was taken three minutes after shaking all of the insecticides, and shows not only the necessity of agitation in the spray tank, but the comparative rapidity with which each one of these materials settles. Basic lead arsenate settles much more rapidly than any of the others, although paris green is a close second. Zinc arsenite, calcium arsenate and lead hydrogen arsenate follow.

The second photograph was taken two days after the first, and shows the volume and corresponding compactness of equal amounts by weight of each material, when settling is complete. This is important from the standpoint of agitation, because it shows that the lighter and more fluffy the material the better it remains in suspension and the easier it is to keep it agitated.

Simple Insecticides Are Best—Tests were made to determine the relative killing efficiency of some of our common insecticides and also to determine the active ingredients in other sold under trade names and containing a number of different chemicals. In all, 18 different materials were examined, including both simple arsenical and proprietary insecticides and the materials used in their manufacture.

The materials are found to be of three classes:

(1) Those having no killing efficiency: Prince's mineral, iron, oxide and silica. (2) those having a slight degree of killing efficiency: Basic lead sulphate. lead oxide, zinc oxide and the compounds of zinc oxide plus lead oxide and zinc oxide plus lead oxide plus iron oxide. (3) Those having a high degree of killing efficiency: Paris green, lead arsenate, calcium arsenate, zinc arsenite, Bug Death, Kling Kill, Tuber Tonic and Insecto.

Paris green and a special lead arsenate gave the best results with practically a 100 per cent killing efficiency within 24 hours. Ordinary arsenate of lead was second and zinc arsenite and calcium arsenate were a trifle slower than the others. The materials known as Bug Death, Kling Kill, Tuber Tonic and Insecto are proprietary compounds which contain as the active ingredients either lead oxide, zinc oxide or some arsenical compound. They are, therefore, merely diluted combinations of poison and have no advantage over a good grade of arsenate of lead or calcium arsenate.

Paris green is the material with the greatest killing efficiency, but it is little better than good brands of arsenate of lead. Ordinary brands of arsenate of lead, zinc arsenite and calcium arsenate are a

trifle slower in action, but are sufficiently efficient for the control of the Colorado potato beetle.

Addition of Lime Prevents Foliage Injury—These tests were made primarily to determine the effect of each material used on the foliage of apple or potato plants. An effort was also made to determine whether or not there was any difference as to burning when the different chemicals were combined with lime or bordeaux mixture.

On potatoes paris green without lime was the only spray which caused any marked damage. This is normally what happens in the field, and is one of the reasons why growers are being advised to use a substitute for paris green.

On apple foliage it has been found that both calcium arsenate and paris green cause injury to the foliage unless they are combined with equal parts of lime, lime sulfur or bordeaux mixture. When so combined no burning has been detected.

COMMON CONTACT INSECTICIDES.

Contact insecticides are usually applied for sucking insects, since they get their food within the tissues and would not ordinarily while feeding take into the body any of the poison which might be on the plants. Plant lice and scale insects are among the most common insects treated by a contact spray.

Lime Sulfur Effective—Lime sulfur, while frequently used as a fungicide, has been for a number of years the standard treatment for scale insects on fruit trees. It combines very nicely with the arsenicals and with nicotine sulfate in combination sprays, but cannot be used with soap.

Lime sulfur, to be effective, must be applied in the fall or spring while the trees are dormant. It should be used at the rate of one gallon to eight gallons of water.

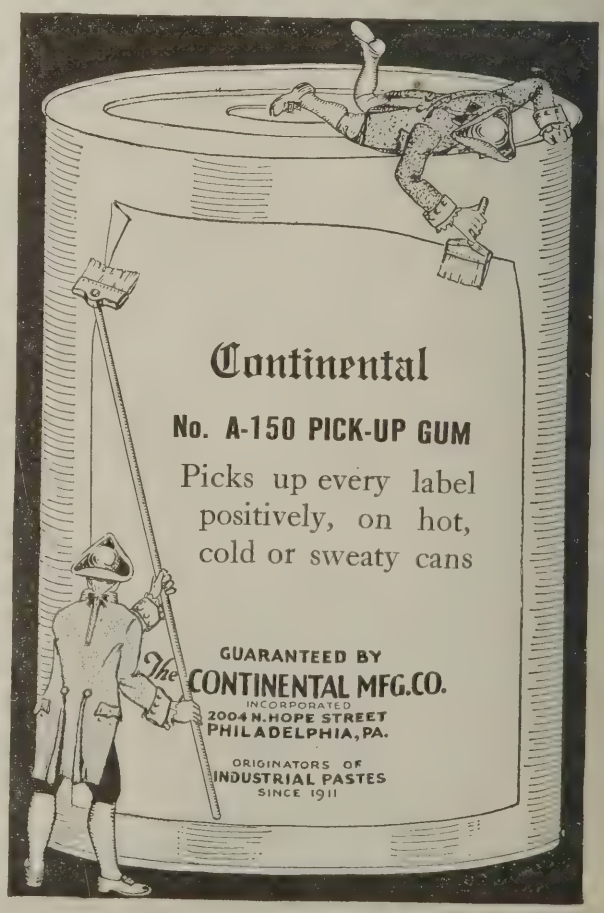
Oil Emulsions for San Jose Scale—The oil emulsions, and especially engine-oil emulsions, have recently been used with considerable success in certain states against San Jose scale. If these emulsions are properly made they are very effective, and are gaining in favor in several states.*

Use Nicotine Sulphate for Soft-Bodied Insects—Nicotine sulphate, when diluted with water, one part to 1,000 parts of water, makes a very efficient spray against plant lice or other soft-bodied insects. For small amounts use one teaspoonful to one gallon of water. Soap or some other spreader should be used for the best resutls. Dissolve the soap first in a small amount of water, using about two pounds to every 50 gallons of spray, or an inch cube to one gallon. If the water is hard more soap will be needed. Use enough soap for good spreading. If nicotine sulphate is combined with lime sulphur the soap must be left out.

Destroying by Fumigation—Fumigation is the use of some gas that fills up the pores of the insect and causes death by suffocation. The main substances used are hydrocyanic acid gas and carbon bisulfide. The cyanide gas treatment should never be attempted except by someone well trained in its use.

Fumigating with Carbon Bisulfide—Carbon bisulfide is still considered the best fumigant for general farm use or where small amounts of infested materials are to be fumigated. It is a heavy colorless liquid which vaporizes rapidly when exposed to the air. The vapor is much heavier than air and settles downward. It is also inflammable and care should be taken to keep fire or lights away from it. Insurance companies are not likely to insure where it is used for fumigating buildings.

The material to be fumigated should be placed in a bin or barrel as nearly air-tight as possible and the carbon bisulfide poured into a shallow dish and placed on top of the material. The barrel or bin should then be tightly covered and left to remain for a period of 36 to 48 hours, after which the material should be removed and aired out.



When carbon bisulfide is left on seed or grain for more than 48 hours it is likely to injure the germination ower. It is important that the temperature in the barrel or bin during fumigation should not be less than 65 degrees.

Carbon bisulfide should be used at the rate of a half cupful to each barrel or a pound to every 35 bushels. For fumigating large rooms or buildings it is used at the rate of 5 pounds per 1,000 cubic feet of space if the room is fairly tight.

Dusting Is Becoming More Popular—"Dusting" is the application of a spray in dust form. Liquid spraying is applying the insecticide by means of water as a carrier. In dusting the insecticide is mixed with lime, gypsum or some other carrier and the mixture dusted upon the plants.

With the advent of dusting there has appeared on the market many types and makes of hand, traction and power dusters. For orchard work power dusters are necessary, but for truck crops such as potatoes a traction duster is sufficient. For gardens or small plots of potatoes a hand duster is all that is needed.

*Those who prefer to make their own emulsions should write for instructions to Department of Economic Entomology, College of Agriculture, Madison, Wis.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

Developing A Field

When you realize that the average community of 50,000 spend $5,000,000 annually on food, it is very evident that there is a vast field for quality canned foods.

That the canning trade is awake to its opportunity is proved by the increasing care and scientific thoroughness of modern canning processes.

Among these methods the increasing demand for

Wyandotte Sanitary Cleaner and Cleanser

for all cleaning purposes in the cannery is doing not a little to improve the fine quality and delicious, safe, wholesomeness of canned foods.

This efficient, pure, greaseless cleaner maintains canning equipment sweet and sanitarily clean. It removes preventable causes of "flat sours". It thoroughly deodorizes.

Ask Your Supply Man.

Poison Insecticides Applied as Dust—Many arsenicals, such as calcium arsenate and lead arsenate are now being mixed with lime or other material and used effectively against such leaf feeding insects as the potato beetle. The greatest value in the use of such a dust is the ease and rapidity with which it can be applied. One man with a good duster can cover two or three acres of potatoes while two men are spraying one acre with a liquid spray. Most of the insecticide dealers now carry dusts of this nature in stock.

Dusting has not proved to be effective against all insects, and therefore should not be substituted for liquid spraying in all cases unless one is sure that results will be equally good.

Mechanical Destruction of Insects.

Hand picking may be resorted to for tomato and tobacco worms, but this method is seldom necessary where up-to-date spraying is practiced.

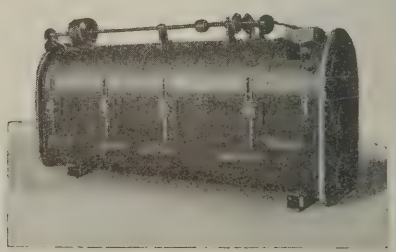
Destruction by crushing consists of running a roller over the fields to destroy army worms and grasshoppers in the nymphal stages, and collecting chinch bugs in holes and crushing by means of a post.

Heat and Cold—Heat is now used to some extent in mills to destroy the flour moth and other insects. Cabbage and other plants infested with aphis may be freed of these pests by dipping them in water at a temperature of 120 degrees F. for six seconds. Plowing up the fields in the fall and exposing the pupae of the insects that spend the winter in that stage is a good control measure.

Destruction by Other Insects.

Practically every common insect is attacked by other insects which feed upon and destroy them. The lady bird beetles, except for a few species, feed entirely on plant lice and scale insects and aid greatly in keeping them in check. Other insects in turn feed on the lady bird beetles. The codling moth and the Colorado potato beetle are also fed upon by other insects and are largely held in check by them. In a few cases it has been found profitable to collect these insect enemies and ship them to local points for the control of injurious insects. When the parasites become abundant they destroy the insects upon which they feed. Then in turn they die for lack of food, and the host insect has an opportunity to increase again. Thus the host insect and its enemy increases and decreases in cycles, but the host always manages to escape complete extermination.

SURFACE DRAINAGE INTO WELL SUPPLIES.



L. A. Geupel, Director Water and Sewage Department. Indiana Board of Health.

SURFACE drainage is the flow of water which has been precipitated on the ground by rainfall seeking a storage basin. Surface drainage carries with it certain materials, including polluted matter over which the water has flowed in its rush to the stream or outlet. It is dangerous to drink surface water which has not been purified, because in its travel over the surface very often pollution from a barnyard, and even from the human body, has been

ROBINS ROTARY TOMATO WASHER.

picked up. Any sewage is very likely to carry disease bacteria and also the lower forms of intestinal parasites, such as worms, etc. Sewage, as everyone knows, is dangerous, and surface water is likewise very dangerous to drink without having been purified or sterilized, because of the fact that sewage may have been picked up by surface water flowing over the ground. Dysentery, diarrheas and even typhoid fever are dangerous diseases which may be acquired from even a slightly laden sewage polluted surface water.

Soil, sand and gravel will filter surface water and make it presumably safe if the filtration strata is deep enough. Absolutely no purification can be given water by soil, sand, or gravel if surface water gains entrance to the top of a well because of a leaky platform or casing. The water supply is threatened also if the top of a casing is subject to overflow of surface water which has collected around the top of the well, or if the pit pollution gains entrance to the water supply direct. The Water and Sewage Department places a high hazard on dug wells because they not only tap a shallow ground water source, but they consistently feed surface water through porous walls all the way up to the platform. Occasionally the water of deep wells becomes polluted by the mere fact that surface water is getting into the well through leaks or sink holes in the rock.

Past history is no guarantee that water is satisfactory at the present time.

A dug well can be investigated and one can even look into same. One can see whether there are leaks near the top of the well, and that is where trouble usually starts. Make the tops and walls of all dug wells water tight to at least six feet under ground, so that no surface water can possibly gain entrance. Watch that the pump drainage carries the drip away. Do not water animals within twenty-five feet, so that no polluted mud hole is caused. In case of deep wells, close all openings between drop pipe and casing and keep water out of the pit.

In 1922 and 1923 the results of two years laboratory work shows about 75 per cent of all dug wells unsatisfactory for drinking, and about 30 to 40 per cent of all deep wells have been neglected and are unsatisfactory to drink. The public wonders why it suffers dysentery, diarrhea and even typhoid. To the Water and Sewage Department there is no cause for doubt, because many times it is a clear case of polluted water supply. The old story that the water from a particular well has been used for twenty years without sickness is no reason why a leak should not develop allowing surface water to gain entrance, causing sickness in the future. The State Board of Health operates a laboratory for water examinations. There is no charge attached to individual analyses except container charge to and from the laboratory. The laboratory makes five to six thousand examinations a year, and would be glad to do more if anyone wishes a knowledge as to the character of their private well supply.

The Water and Sewage Department urges the full co-operation of the public to obtain satisfactory water to drink, especially in the individual well, and the semi-public well, which includes school, church, town, tourist camp, park, fair grounds and bakery wells. It is important to note that the tourists passing through the towns of Vevay, Marengo, Petersburg, Rochester, Winamac, Hazleton, Batesville and Vernon should not drink the public water supply because it is not sold to the public for drinking purposes.

In conclusion, through use of the Water and Sewage Department's service offered, we hope that every health officer will order all semi-public wells examined and citizens of the state will have their individual wells examined periodically in order to know the character of their supply.

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Springwood, Va., July 18, 1924—Tomato crop very promising, with the exception of blight appearing. Corn is extra good.

A good crop of fruit of all kinds, and promises to be of good quality.

Kenton, Del., July 15, 1924—Tomatoes—Acreage about same as last year. Conditions are very poor; does not look over 50 per cent of a crop. Plants are very irregular in the patches.

Rochester, N. Y., July 18, 1924—Alaska Peas—About 65 cases per acre. We consider this about 80 per cent of normal.

Just beginning pack of wrinkled or sweet peas, and if favored with frequent showers our pack will be normal or better.

Corn looking good but late.

Stringless beans looking good.

Tomatoes looking good, but need warm weather.

Bay City, Mich., July 16, 1924—Tomatoes—Crop somewhat late. Acreage 100 per cent. With reasonably late fall expect full pack.

String Beans—Expect fair yield from acreage planted.

Blueberries—Considerable damage by late frost in the berry district. Crop will be at least ten days late. Do not expect over 50 per cent of normal pack.

Pickles—About 95 per cent of acreage planted. Vines looking fairly well.

Celina, Ohio, July 16, 1924—Alaska peas 50 per cent. Sweet peas 85 per cent.

Tomatoes now look to be about 50 per cent stand.

Lebanon, Ohio, July 18, 1924—Throughout this section sweet corn is in a very uncertain condition. The weather has been responsible mostly for this. Many fields have been too wet for planting, and later rains prevented the necessary cultivation. It will take very favorable weather as well as a late fall to make it possible for an average crop.

Midway, Tenn., July 15, 1924—The canning business in this section this year is going to be a failure. I don't think we will have over a 25 per cent pack this year.

Algood, Tenn., July 18, 1924—We had a very late season this year. Rained most of the time. Setting late, but we have about twice as many acres in toma-

PERSONAL CHECKS ACCEPTED

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY
BRISTOL, PA.

Established 1784

toes this year as last. Prospective yield about 80 per cent.

We canned about 10,000 cans of blackberries, and are perhaps a little over half done.

Lots of people put out tomatoes that did not last year. Some failed to plant that planted last year. Rains caused several not to plant their acreage of tomatoes.

Indianapolis, Ind., July 16, 1924—Peas—Finished packing peas last week. Pack for 1924 approximately 85 per cent. Quality good.

Tomatoes—Our acreage this year 10 per cent greater than last. Condition at planting time bad; many growers very late setting plants on account of rains. From all reports received plants are doing fairly well. Our pack will start 7 to 10 days later than usual.

Pumpkin—Outlook very poor.

Chemung, Ill., July 17, 1924—Peas—Acreage 20 per cent above 1923. Yield 50 per cent normal, quality below normal. Had too much rain, fields drowned out in many places. Maturity very uneven.

Brillion, Wis., July 17, 1924—Peas—We are packing Alaskas and expect to finish about July 25th and start canning the sweets about July 20th. We find practically no lice and are packing about 70 cases to the acre now. We expect that the later Alaskas will be heavier in quantity and of about the same quality. The sweets look promising.

Fremont, Mich., July 16, 1924—Peas—Pack completed. Yield fair.

Strawberries—Good crop, exceptional quality.

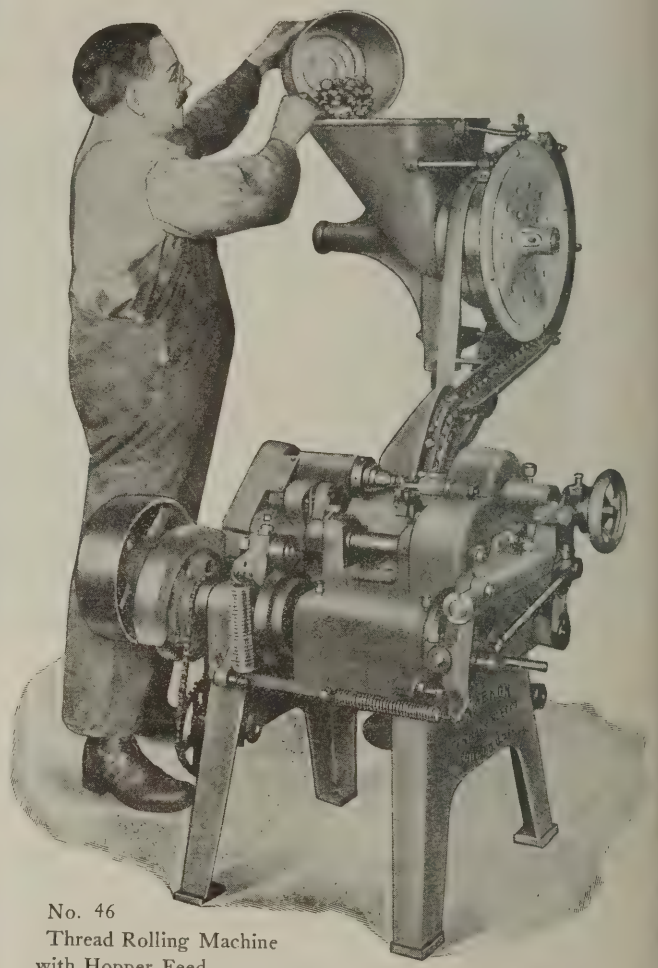
Gooseberries—Light crop, good quality.

Sour Cherries—Light crop, excellent quality.

Beans—All kinds. Stands irregular. Growth retarded by cool weather. Outlook unsatisfactory.

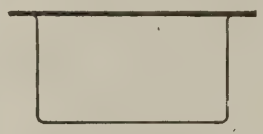
Faribault, Minn., July 18, 1924—Sweet corn—About two weeks late. Prospective yield 80 per cent of normal.

Watertown, Minn., July 19, 1924—Corn—Bantam about 85 per cent. Crosby about 90 per rent. Later varieties about 80 per cent.



Cedar Rapids, Iowa, July 16, 1924—Tomatoes normal. Weather warm and model for tomatoes. Too early for reliable information on tomatoes.

Belle Plaine, Iowa, July 16, 1924—Corn about two weeks late. Poor stand and altogether too wet. Think it will be about 60 per cent.



Leon, Iowa, July 18, 1924—We have 10 acres of tomatoes contracted. They are about two weeks late. The average size of the tomatoes in the fields that I visited are about the size of a hickory nut. The crop will be short unless we have a late fall.

Billings, Mo., July 17, 1924—Tomatoes—Acreage is about 25 per cent above normal. Condition of plantings: 25 per cent very poor to come in in September; 50 per cent fair to come after August 20th; 25 per cent good to come in about August 10th. August pack will be light. Early plants show little fruit. Prospective yield below normal, due to excessive rains all of June and again floods of rain last week.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS
at
WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

GEORGIA'S PEACH CROP GOING TO WASTE.

ALLOWING for possible exaggeration, isn't the following report, taken from the daily papers, as you will note, a horrible thing? And how the temper of our population has changed when it will read of the deliberate destruction of four million bushels of good, ripe peaches while millions of people are hungry for them. What a terrible waste; what wanton waste! Do not try to say that there is not something radically wrong with our distributive system when good food of this kind is deliberately wasted to keep the market prices up, while millions long for it.

Why are there not canneries there to preserve this excellent fruit, in its prime condition, for use during the winter, or to work it up into preserves, jams, peach butter, to be sold to the hungry masses in all the city places? Here is a situation where the canning industry vindicates itself, and upon which an epic might be written. The dispatch says:

(Special Dispatch to the Evening Sun.)

Macon, Ga., July 21.—The aroma of fermenting peaches is arising from the streams and fields of Middle and Southern Georgia, for during the last 10 days peach growers have thrown away approximately 4,000,000 bushels, or 8,000 cars.

The whole crop this year has ripened during July, markets are glutted and peaches are not bringing shipping charges. Hence the determination of growers not to ship any more this year than the markets will consume. Nothing but the Elbeetas are left to be shipped. This will be a short crop, estimated at between 3,000 and 5,000 cars. If prices are not satisfactory, the growers have indicated that these, too, will be thrown into the streams.

The situation is tragic throughout the peach belts and growers are in a panic. Peaches were selling here today at 8 cents a basket, or 40 cents a crate, hardly enough to pay for the crates and baskets in which they are packed, with no allowance for picking, packing and hauling. In New York the price is as low as 60 cents a crate. Shipments to Northern markets have to be made in refrigerator cars, with 5 tons of ice for initial icing for each 500 crates. Further expense for the growers in shipping, of course, is the freight charges. Nearly 2,000 cars have been sold during the last week at prices below the actual charges.

For the grower to break even in the New York market it is claimed that a price of $1.50 a crate, or approximately one and a half cents a peach, is necessary. Any return above that price is profit. In fact, the growers say that they need two cents for every peach shipped to obtain a profit.

Total shipments of peaches last year for the entire season, over a longer period, was 8,701. Total shipments this year to date are slightly under 7,500 cars.

Slaysman's No. 0 Double Seamer

This Double Seamer will do the same class of work as the more costly machines.

Especially adapted for double seaming tops on filled cans.

Weight, 150 lbs.

Will receive cans up to 7½ inches diameter by 8 inches high.

Diameter of tight and loose pulleys, 6 x 3 inches.

Speed, tight and loose pulleys, 600 r. p. m.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek **Kewaunee, Wisconsin**

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

But there was the greatest peach crop in the history of Georgia produced this year. The season was three weeks late in starting and the ripening was over a short period, practically all varieties being marketed during July. That is the cause of the growers' troubles.

Orchard men still have hopes of recouping some of their losses on the Elberta crop. Many of them are fortified with other crops, so that to those who have diversified farming interests the failure of the peach crop to bring satisfactory prices will not mean financial ruin. But it will be a hard blow to the whole industry.

People who passed through the peach belt today said that in addition to the 8,000 cars that have been thrown into the river, there are hundreds of cars of dead-ripe peaches on the trees that will never be picked.

Many of the growers are begging friends from the cities to come and pick what they want without charge.

Because of the tremendous crop of peaches, the Georgia Peach Growers Exchange, with the Government co-operating, worked out the greatest distribution system ever attempted for this year. But markets wouldn't consume the crop.

THE KAN KAN.

Published in the interest of the Michigan Canners Association.

THE Michigan Canners Association was rejuvenated with new elixir of life at Muskegon, June 18th.

It matters not whether it was "glands" or "oxygen"—it was there.

If you were there you got it. If not, you missed it. This is just an echo.

"Quality Plus" was the slogan, "Better Business" was the keynote of discussion and action.

President McEwing, compatriot of Bobby Burns and Harry Lauder, with the sentiment and sense of a wise and canny heritage, drafted about everybody in the game into an active working organization.

Read over the committees. Is your name "written there?" If so, get busy. If not, make the other fellows get busy.

That's the way to get your money's worth.

Frank Gerber, former president of the National Canners Association, gave an enlightening address upon business conditions and prospects. He stated that there had been a marked recession in first hand buying of canned foods in recent months. (Perhaps you had noticed it.) He also stated that there was evidence of better conditions at hand. (Encouraging prophecy.)

H. W. Ullsperger, manager of the Sturgeon Bay (Wis.) cannery, arrived late, having missed the night boat out of Milwaukee. His principal mission was to learn whyfor some Michigan canners had gone philan-

GOLD SEAL TIN PASTE

Reg. U. S Pat. Off.

For Spot Labeling

Gold Seal Tin Paste sticks your labels so that they *cannot be pulled off.* It never gets brittle nor allows the labels to loosen up on the dealer's shelf.

It comes ready for use without mixing, shipped in 5 gal. cans, 30 gal. and 50 gal. barrels.

SPRAGUE-SELLS

Sprague-Sells Peeling Table

No cutting—no fitting of tops and parts

The great difficulty with Peeling Tables in the past has been the tremendous amount of labor and grief involved in installing them. Cutting, fitting, and considerable cursing, then more fitting and cutting—doing work that should have been done in the manufacturer's plant.

To eliminate trouble for you, Sprague-Sells Peeling Tables are now entirely assembled in our factory, operated and thoroughly tested, then knocked down and shipped in sections complete with all bolts, screws, and other parts required. Adjoining sections are carefully marked and numbered, and the shipment comes to you accompanied by a simple erecting diagram, so that even unskilled help can quickly and easily set it up on your floor.

Furnished with plain steel top—or with acid-proof enamel top.

We recommend the acid-proof enamel job. Its original cost is slightly greater but the absolute freedom from corrosion resulting in much longer life, and the fact that this enamel finish is so easy to keep clean and sweet, certainly warrants the extra investment.

Frames, tracks and trucks only may be purchased if you wish to build your own tops of wood.

All our machines are guaranteed to satisfy you—your money back if they fail to do so.

PEELING TABLE

This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

thropic, with the result that his trade was yelling for an equalizing shade which he felt forced to concede in some measure.

He don't look like a man easily stampeded.

The cherry situation was somewhat chaotic. Other considerations than crop prospects or market conditions enter into the proposition.

Seems like a good time to sit tight and not rock the boat.

Conditions have stabilized to a marked degree since our meeting, and President "Mc" thinks that it has been "a direct result of having gotten together."

The Secretary is serving without compensation, but you can make him the clearing house of information and inquiry. He will distribute the work if the worry is too much for him.

In the last issue of the Michigan Patron, official organ of the State Grange, W. F. Taylor, a member of the State Grange Executive Committee, tells how he helped Grange members to solve the matter of canned fruit for their households by purchasing canned peaches and other canned fruits from regularly licensed Michigan canneries. He shows that the plan has proven satisfactory both from cost and quality standpoints.

The Fremont Canning Company is making an effort to grade its fruit offerings and pay relatively fair prices for the different grades, a consummation devoutly to be wished for.

The Company is using its town paper to explain its plan. It's the easiest possible way of keeping in touch with your growers.

Create confidence in Michigan quality—that's business building.

Officers and Committees of the Michigan Canners Association.

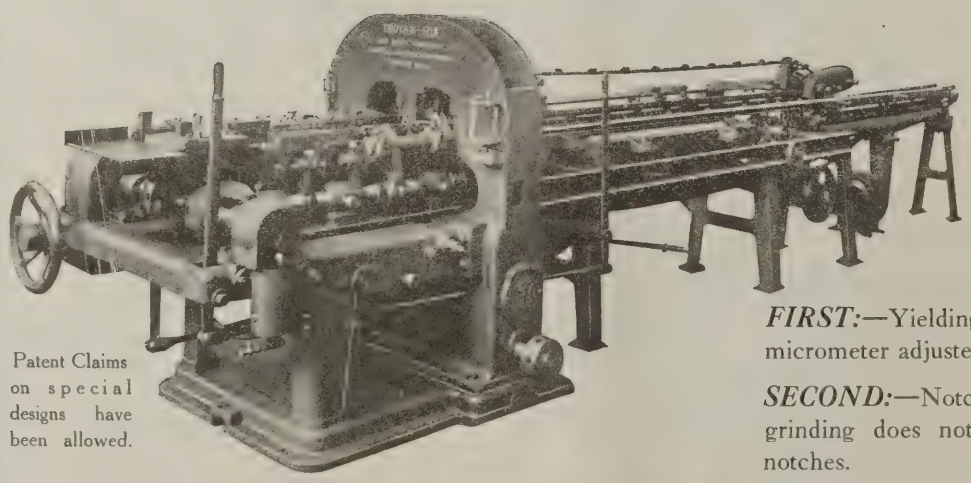
Don't Let the Elephant and the Donkey Get Your Goat



Yes, this is a presidential year. There is an election in the offing; and of course folks are talking politics. But why should we be filled with melancholy meditations?

Cheer up! We have had presidential years before, and we managed somehow to live through them

Do you know the real reason presidential years are reputed to be "bad for business"? Well, here's the deep, dark secret: When the circus managers bring out the donkey and the elephant and begin to dust off the old band wagon, why we all stop work to watch the parade. And no one ever waxed wealthy watching a political parade.

There's no reason in the world why the man who keeps right on hoeing his row shouldn't come out way ahead in a political year, just the same as any other time. Truth to tell, he should do better than usual, because there isn't so much competition. Most people aren't even trying. You are up against the same proposition as the salesman who finds he can do twice as

Baltimore, Md.

much on a rainy day, because his competitors are all haunting the hotel lobbies, satisfied with the alibi that "nobody can sell anything on a day like this." It's reasonable to assume that we'll do so again.

For goodness sake, let's face this residential question sensibly. Just because we are going to send somebody to the White House there's no reason why the rest of us should go to the poor house. But that's where we are likely to land if we quit hustling, and decide that there is no business to be had until "after election."

By all means take an interest in politics, and vote according to your honest convictions. You might even go so far as to make a few stump speeches for your favorite candidate, if you just can't restrain yourself. But—don't let the elephant and the donkey get your goat!

Pep is an explosion of physical energy—no good unless harnessed.

Pull is working your friends for what you should do for yourself.

Push is energy and brains under direction and control.

Did you ever make a nickel for yourself trying to head your competitor off from a dime?

The shrewdest buyers are not those who pick the lowest prices, but those who pick the goods with the highest merit.

Make Michigan canned foods have the appeal of quality.

This little folder is prepared by the Publicity Committee and issued with the compliments of the Royal Publishing Company, Shelby, Mich., specialists in canning factory printing and office supplies.

PACK QUALITY.

Clyde, Ohio, July 19, 1924.

"Corn crop hits new level" is the belief of C. J. West, State-Federal Agricultural Crop Statistician, and blames unfavorable weather as the responsible factor.

The above is a headline that appeared in a prominent daily paper July 17, 1924. The article gives detailed information about the poor crop conditions and should be a valuable guide to all who merchandise agricultural products. Mr. West says the State's corn crop this year will be only two-thirds as large as that of 1923, and prospects have not been so poor since 1904. It is reasonable to believe that all crops have been retarded likewise.

If we can apply Mr. West's estimate on the field corn crop to the sweet corn crop, and they are always closely related, and if we can say that the sweet corn pack will be about two-thirds of last year's pack, then we will do well to reach a 10,000 case pack in the whole United tates, or about 4,000,000 cases shy of the ordinary consumption, and very little, if any, carry-over in first hands.

It is reported that we must have very favorable weather and a late fall to insure anything like a fair pack of tomatoes.

And it is said that cabbage and pickles must enjoy the best of weather if they are to be advanced properly.

Taking all in all, the canners apparently hold the whip hand this year, so don't spoil it by packing up poor quality.

THE OHIO CANNERS ASSOCIATION, INC.
Roy Irons, Secretary-Treasurer.

A Perfect Scald.

is accomplished on the MONITOR Tomato Washer and Scalder. In the operation, is first, the picking space. Here bad stock can be detected and removed. Next the washing space where the mud, mold etc. is removed. Then the dry hot steam space. Here is done a perfect scalding. Then the final spray of cold water. Here is split the skin so as to make easy the removal of the skin.

No process could be better or more economical. Is your order among those placed this year? A lot have been ordered.

You can save money by buying MONITOR machines for 1925 NOW.

BALTIMORE, JULY 28, 1924

WEEKLY REVIEW

Better Crop Weather Is Causing Hopes to Rise—Pea Pack Coming on Nicely—Good Fruit Crops Offer an Opportunity —Spot Canned Foods Strong Everywhere—1924 Spots Should Be Worth More Than Present Price of Futures—Corn Joins the Cleaned-out Class.

IMPROVING—It takes but a few days of good, real summer weather—like we have had this week—to bring the spirits of both canners and buyers up into the hopeful realm, out of the depression in which both of them have been, owing to the unfavorable weather and crop conditions which have held sway since the season first opened. They should put a check upon their rising hopes by remembering that it will take the rest of the season and prime weather conditions to restore the damage that was done earlier, if it can be restored even under those conditions. As we regard it, the good weather will undoubtedly help, but it cannot cure the trouble. That would be expecting too much. Good weather will not replant the lost acreages, will not add one acre to the present total; but, of course, it can improve the yields from the present acreages, and that we hope will result, for it is badly needed.

We believe that the present week may be written down as the most gerenally favorable to crops that we have had this season, and we sincerely hope that it will continue for many weeks to come. That covers the weather conditions as affecting canned foods at this writing.

On the other hand, the heat which we need for both corn and tomatoes may cause trouble for the pea canners who have just begun upon their sweet peas. But the Lake regions have not been visited as have the other sections, and they can stand some heat, though Wisconsin, at least, in parts, reports the need of rain. The pea crop and pack, however, are coming along quite nicely, and will be better than earlier indications promised.

FRUITS—The news that Georgia is allowing an immense peach crop to go to waste, and has yet in reserve the great Elberta crop, is most distressing. The real cause is that there are not enough good canneries at hand to save these crops. There have been several efforts to establish canneries in this great peach belt—there are some canneries there, though not enough—but the efforts have not been very successful. Georgia, however, is not the only place where fruit is plentiful, or will be plentiful. That seems to be the promise in most sections—the fruit crops of the year are very promising. For this reason fruit canners must move cautiously. At present the market for canned fruit is good, with demand quite active, and this can be continued by a careful attention to quality. Good fruit is always wanted and salable, and the good fruit crops of this year should give these canners an opportunity to win over the great consumer demand. The carry-over of canned fruits is not heavy, either in first or second hands, and the effect of careful packing will, therefore, be felt at once.

SPOTS—The real feature of this week is the excellent condition into which the markets of every section have worked on spot canned foods. It is now freely admitted that buyers' stocks as well as canners' are down to the vanishing point—cleaned out as they have never been before—and the buyers are making less secret of this fact. Trading in spots is now largely between jobbers or second hands, and while prices are not mounting, they are stiffening and showing some advances. Most traders want goods, and would like to have additional futures on their books, but the canners cannot afford to take further orders. The prices at which futures are sought by the buyers are not such as to warrant any canner taking further risk. The spots, after the close of the canning season, will almost certainly be worth more money than the present future price, and, therefore, the canners are wise to hold for this opportunity.

Corn seemed to be the one item that might show some carry-over from last year's pack, but even that is now extremely doubtful. Note this letter from Ohio:

> Columbus, Ohio, July 22, 1924.
>
> It is with a great deal of pleasure that the writer can say to you that the spot corn market is practically clean, so far as packers' stocks are concerned, and in many instances jobbers' floor stocks are far below their normal holdings at this season. Of late we have been selling spot corn from one jobber to another and shipping it all over the country. We are having inquiries for spot corn from Jacksonville, Fla.; Eastern New York, different points in the West and Southwest, which indicates a condition as described above. Today we are selling spot standard corn, where we can secure it, at $1.15 per dozen, and some jobbers indicate a willingness to pay beyond this figure if they can obtain it in an unlabeled condition. This is a wonderful clean-up considering the position of corn for the past three or four seasons, and to some extent it is attributed to the improved canning conditions in our own State. Packers have learned from bitter and expensive experience that they must turn out a better product than they have heretofore been doing, and we urge you this season to increase your efforts to produce the finest pack of corn in the way of consistency, fill, cleanliness and flavor that you have ever put up. It will pay you many times over to discard and feed to the hogs any tough, matured or yellow grain corn. Watch your fields carefully and be most particular on your sorting tables. The packers of Ohio have a wonderful opportunity this year to make a name and demand for OHIO CANNED CORN. Do not fail to take advantage of it. Owing to the higher prices that the jobbers are paying and will continue to pay for 1924 corn because of the general unfavorable conditions,

the buyers will be more critical than ever of your deliveries, and you must not let them have the slightest opportunity for complaint.

I am taking the liberty of writing you, as a friend, of this possible result on your part, and if rejections develop from poor or inferior quality of corn, you are going to hurt your own interests and those of every other canner because it will demoralize the market. There are a few canners in this State whose ideas heretofore have been quantity rather than quality. Do not permit this situation to develop this year or it will ruin all the good work that has been started for a quality pack. Use sugar and salt. Do not pack substandard; throw it away, and help to restore canned corn to the position it occupied several years ago, which was fifty-fifty with tomatoes. Today it stands third, but with your efforts in the right direction it has a wonderful opportunity to advance to first position this season.

Most of the packers are now quoting standard sweetened corn at $1.00. We are glad to see this, and hope that you will not oversell, but govern your sales so as to deliver a product 100% in quantity and quality.

Very truly yours,

F. L. DUTTON CO.

It will be at least a month before any new corn can come upon the market, and in the meantime any corn held in first hands will have disappeared, it would seem. This makes the position of the three great staples of canned foods—corn, tomatoes and peas—alive and very strong. Peas were all gone; tomatoes will be all gone, and now corn follows suit in this cleaned-up condition. Let the packers of these items follow the advice laid down by F. L. Dutton, and this condition will become permanent. That is all that is needed to hold the advantage now enjoyed.

Our market page shows practically no changes this week, but business is reported by the brokers as quite good, and, coming from all sections, shows that the decreased condition of stocks is general. And it portends very favorable business of the months to come.

NEW YORK MARKET

Spot Tomatoes Strong—Scrambling for Spot Stocks of Canned Foods—Buyers of Future Tomatoes Feel Happy, but Worry About Possible Short Deliveries—Early Peas All In—Prorating Pea Deliveries—Future Tomato Prices Advancing—Corn Steady and in Fair Demand—Whitemeat Tuna Weakens.

New York, July 24, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

SPOT MARKET STRONG—There has been considerable business for spot canned foods during the past week. The actual volume has necessarily been limited, however, owing to the paucity of spot holdings of the more wanted grades and varieties. Wholesale grocers and chain store jobbers alike are carrying but limited stocks of most canned foods on spot, and there is considerable competition in buying the small lots still available. Thus far, however, the distributors have kept prices from ascending too rapidly and no upward stampede appears in sight for the remainder of the season.

New Packs—The situation is somewhat uncertain on new packs. It is generally conceded by buyers that tomatoes will probably be a short pack this season, but just how short is the problem which is puzzling them. Buyers who have booked futures on a fairly liberal scale are now congratulating themselves on their foresight, while at the same time they admit that they are concerned over possible pro-rating on deliveries by the canners. Many of the Southern packers this season booked business on 100 per cent delivery contracts. It is reported from some sections of the Tri-States that a good deal of the acreage which canners have under contract may not supply any tomatoes at all this season, due to the fact that the first settings of the plants were destroyed by unfavorable weather, and subsequent plantings have met the same fate, until it is now too late to set out more plants, even though the plants were available.

Peas—Reports from Wisconsin indicate that the pack of Alaskas was somewhat below expectations, canning of this variety being over for the season. Indiana is through packing. Pro rata on the larger siftings is anticipated, while packers have a little surplus of the smaller siftings, after filling their future orders. From present indications, last year's scarcity of standard and extra standard 4s and 5s is due to be repeated, and this should react to the advantage of the Southern canners who have unsold stocks of these grades on hand.

Tomatoes—The season is very backward in Indiana this year, and it is reported that on the average the pack will be a month behind time this year. The pack in the Tri-States is also expected to be late. Trouble is also being experienced in California, the drought and blight in some sections having combined to cut the crop this year. Southern canners are offering futures in a small way at 60c for 1s, 90c for 2s, $1.30 for 3s, and $4.25 for 10s. Many packers, however, continue withdrawn, because of the uncertain crop outlook. As a result of the damage to the growing crop, some of the California canners have advanced their prices, as follows: No. 1s, standard, in puree, 82½c; solid pack, $1.02½; No. 2, standard, in puree, $1.00; solid pack, $1.25; No. 2½s, standard, $1.17½, solid pack, $1.60; No. 10s, standard, in puree, $3.75; solid pack, $5.10.

Southern Spots—Continued strength is reported in spot tomatoes in Maryland and Delaware markets. No. 1 standards are quoted at 60c per dozen, 2s at $1.15 to $1.20; 3s, $1.32½ to $1.35, and 10s at $4.00 to $4.25, all f. o. b. cannery. Puree is available in a small way at 55c per dozen for standard No. 1s.

Standard Corn has been meeting with a fair call throughout the week and remains steady on the basis of $1.00 per dozen, f. o. b. country cannery, with extra standard quoted at $1.05 per dozen. Futures are attracting some interest, the market ranging 95c to $1.00 per dozen for standard and $1.00 to $1.35 per dozen for fancy, as to grade.

Bean Pack On—Maryland and Delaware canners are now working on stringless beans, quoting the market nominally at $1.00 for 2s and $5.00 for 10s, cut, f. o. b. cannery. Canners are mainly concerned in taking care of their future orders at this time, rather than in making additional sales, preferring to let further business go until they have shipped out their orders and are in position to make a more accurate estimate of the quantity they will have left to sell later on.

Salmon—Demand has increased, and the more seasonable weather has brought out an increased demand from the retail trade, which is reflected in increased activity in jobbing circles. The trade is beginning to place little more credence in reports of a probable curtailment of the Alaska pack. Pinks command $1.25, Seattle, on both spots and futures.

Sardines—Maine sardines are meeting with a fair call. The pack is increasing, but is still running below normal for this season of the year. Buyers appear determined to force lower prices, and buying is generally of l. c. l. parcels, comparatively little carlot interest being shown. California No. 1 ovals in tomato sauce are now being offered for prompt shipment at $4.10 per case, f. o. b. Monterey, quarters in olive oil offering at $8.50 per case, f. o. b.

Tuna—Reports received here today indicate that the whitemeat tuna market in California has weakened materially. Earlier in the week packers were quoting firm at $19 per case for 1s and $10 per case for halves.

It was reliably reported today that business has been booked firm at $17 per case for 1s and $9.00 per case for halves, and one instance was reported in which a packer offered ones at $15 per case and halves at $8.00 per case, all of these prices being f. o. b. California cannery.

Shrimp Scarce—Quite an active call for shrimp was witnessed during the week. Stocks here and supplies offering for shipment are very limited, and wholesale grocers anticipate a shortage before new stocks are available at the canneries, which will be during the fall months. The resale market is more or less nominal, owing to the short stocks offering.

Canned Friuts—New pack California canned fruits were quiet during the week. All of the leading factors now have their prices before the trade, and distributors have booked sufficient stocks to take care of their early requirements. There is more of a tendency now to hold off placing further business until more definite information is forthcoming from California as to the size of the packs of the various grades and varieties of fruits. Stocks on spot, both in jobbing and retail hands, are reported to be rather light for this season of the year.

Notes of the Trade—Kenneth C. Sayre, formerly with U. H. Dudley & Co., before the liquidation of that well-known brokerage concern, is now with Dudley & Weisl, Inc., handling dried fruits and canned foods. Mr. Sayre is well known to the trade here and is popular with buyers.

William G. L. Behr, in charge of the European business of the California Packing Corporation, was visiting C. A. Lumb, in charge of the California Packing Corporation's affairs here, this week. Mr. Behr is on his way to Europe, where he will spend several weeks in looking after the Corporation's affairs.

Allan Bacon, of Bacon & Trubenbach, Inc., is visiting pea canners in Wisconsin.

Walter J. Sears, of Chillicothe, Ohio, was a visitor here this week.

William Olney, of the New York Canning Co., of Chillicothe, Ohio, has shipped several carloads of new pack fancy sweet peas into the local market. The peas have shown excellent quality, and have gone right into consumption. William Hills, Jr., & Co. represent Sears & Nichols in this market.

E. L. Dukate, of the Dunbar-Dukate Co., shrimp canners, of Biloxi, Miss., was here during the week, stopping with his brokers, North & Dalzell.

ST. LOUIS MARKET

Market Continues Active in the Same Small Trading Way—Peas Hold Firm—Tomatoes Firm on Poor Crop Prospects—Canners Out of the Market on Both Corn and Tomatoes—The Market Quotations.

St. Louis, July 24, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

THE MARKET—Business in canned foods continues about the same as during former weeks. Quotations, in spite of the moderate amount on hand for immediate distribution, are about uniform. There is not enough speculative trading to take blocks from the market. This has been the cause for some sharp advances. Jobbers continue to buy on the hand-to-mouth plan, and only as they require the goods. They have light stocks and are moving them steadily. All trade channels are more or less active as to futures. The policies that prevailed on the purchasing of new packs have now changed somewhat. Now that packers are withdrawing generally from the market, there seems to be a burrowing by those who have not looked ahead to cover. Spot stocks are already exhausted. Jobbers' stocks are down as low as they can get, and the market will almost be cleared up when new supplies are to be had.

Peas—The strength of spot peas is being maintained. Southern packers have finished their packs and are now checking up. Their pack is generally of excellent quality, and the result has been that they have taken well. Up in Wisconsin they have a weather proposition. They will be governed as to volume and quality by the kind of weather that prevails during the packing. As it has been cool up to the present time, packers are afraid that it will now be hot. The uncertain outlook caused no free selling, since the majority of canners have booked to the limit.

Tomatoes—Tomatoes are firm, with a premium being paid for preferred packs. Packing in both the South and Middle West may be cut down by damage to plants which are commencing to bear. With fully 90 per cent of the packers still withdrawn from the market on futures, because of unfavorable crop conditions, and the spot market reflecting something of the strength developing as a result of the new pack uncertainties, the situation is certainly favorable to the seller.

Corn—Prices on corn are firm, as the coming crop is also in doubt. Canners are not willing to sell when they do not know what deliveries they will be able to make. While the crop is late, recently it has been making more satisfactory developments than at any time since planting. Current offerings are in fair jobbing demand. Fancy would move more freely, but it is not available. Standards are the main sellers, as they constitute the bulk of the supply.

Miscellaneous—String beans and other minor vegetables are unchanged.

Fruits—Although the placements of contracts on new packs are, as a rule, late, future business in California canned fruits and other packs are much in excess of last year. The prospects of short packs increased prices on fresh fruits, in the opinion of the best informed packers, and will cause advances in new packs. Forward buying of peaches has been very heavy. While the pineapple has not shown a heavy increase, it is estimated that at the prices now prevailing the item will show an increase of possibly 25 per cent over last year. Apricots have been well taken, and pears and berries show a broader movement. Short packs are anticipated in all kinds. Spot trading in canned fruits has only been routine, but supplies have been closely cleaned up, and 1924 packs will come into a practically bare market.

Prices quoted are as follows, f. o. b. at point of interest:

Tomatoes—	
No. 2 Standard, Indiana	$1 20
No. 3 Standard, Indiana	1.75
No. 10 Standard, Indiana	5.50

CALIFORNIA MARKET

Business in Fruits Very Satisfactory—High-Priced Fruit Forced High Prices—Apricots Small in Size, Owing to Drought Growers Get High Prices for "Cots"—The Shipping Problem Considered—Developing Export Business—Coast Notes.

San Francisco, July 24, 1924.

By "Berkeley,"
Special Correspondent "The Canning Trade."

VERY SATISFACTORY — Business in California canned fruits continues to be very satisfactory, and the revised prices put out recently by some of the large interests do not seem to have affected the demand. When prices were brought out in June, business did not start off with a rush, but sales have shown a steady increase since then, the trade realizing that lower prices were out of the question and that advances might be expected, especially on some of the lower grades. Wholesalers and retailers are still exercising caution in buying, but are commencing to anticipate requirements further in advance than seemed likely a month ago. Some buyers originally pointed to pears as a fruit that was priced too high, but such certainly was not the case with canners paying $57.50 a ton for choice fruit. This fact is now realized, and pears is one one of the strongest selling items in the list, with last year's pack out of the way.

Apricots—The packing of apricots grown in the interior valleys came to an end some time ago, and the crop in the San Francisco Bay district is now receiving attention. This friut is showing the effects of the long drought, and a larger proportion than usual runs to small sizes, despite the attention paid by growers to thinning and cultviation. The general quality, however, is excellent. Canners are paying from $60 to $65 a ton for No. 1 canning fruit, as compared with $25 and $30 last year. The crop in the southern part of the State has been a light one, with small sizes predominating, and the canned pack is very limited. Canners handling this fruit are not figuring strongly on profits, owing to the high prices being paid growers. Some apricots of last season's pack are still on hand, but holdings are confined to a few canners.

Shipping—A conference of shipping interests, the most representative ever held on the Pacific Coast, was held recently at the Palace Hotel, San Francisco, under the direction of the California Development Association, the meeting having been held for the purpose of organizing a shippers' regional advisory board for this district. The activities of the board will include the study of production, markets, distribution and trade channels, an analysis of transportation needs, anticipation of car requirements, promotion of heavy loading and efficient handling of cars by shippers and railroads, and the securing of proper understanding by the railroads of the shippers' transportation needs. Growers and packers of California fruits, mindful of losses in the past through insufficient rail equipment, took an active part in the plans for the conference. The canning trade was well represented on the committees by Preston McKinney, vice-president and secretary of the Canners' League of California; Charles E. Virden, of the Virden Packing Co., and director of the California Development Association, and A. M. Mortensen, general manager of the California Prune and Apricot Growers' Association. The advisory board organized is the twelfth of its kind in the United States.

Exports—Realizing that the export business in California canned fruits must be expanded to assist in caring for the great increase in the pack expected within the next few years, packers are turning their attention to the development of markets in the countries bordering on the Pacific. Under the direction of the California Development Association, several exhibits were recently prepared and shipped to Honolulu, Kobe, Shanghai, Hongkong, Manila, Singapore and Colombo, where they will be made permanent institutions. Dr. William C. Hanna accompanied the exhibits on the steamer President Garfield. The exhibits included peaches, prunes, pears, grapes, celery, asparagus and other products in attractive glass containers, with quantities in tin.

Coast Notes—Very little information of an authentic nature has come out of Alaska this season in regard to the probable size of the salmon pack, and it will be another month before this can be sized up accurately. The division of Alaska into eight areas, each with specific fishing regulations, has tended to make the matter of estimating the pack a rather difficult one. The areas in the regulations of Secretary of Commerce Hoover are Bristol Bay, Alaska Peninsula, Chignik, Kodiak, Cook Inlet, Prince William, Copper River and Southeastern Alaska. Fishing is prohibited in a number of places, others have definite closed seasons and the kind of gear that may be used is specified. Canners declare that the days of heavy salmon packs are over and that low-price salmon is also a thing of the past.

The packing of pineapple is in full swing in the Hawaiian Islands, and the early estimates of a heavy pack are being fulfilled. From present indications this will not be less than 6,000,000 cases. The prices made in June proved satisfactory to the trade, and buying has been heavy, and is still keeping up. Growers will receive about $35 a ton for their crop, as compared with $42 in 1923. Crushed grades are quoted higher than in 1923, when low prices had to be named to move stocks, but sliced goods show a substantial reduction.

Despite the drought, the peach crop in Kings County, Cal., is proving of good size and quality. The crop, as a whole, will be larger than that of last year, while the crop of canning clings will be about the average. Last year 14,859 tons of peaches were handled by Kings County canneries.

The South End Warehouse, San Francisco, has been made a manipulating bonded warehouse, the first of its kind on the Pacific Coast. By the term of article 562 of the tariff act of 1922, a bonded warehouse can secure permits under certain regulations to allow the repacking, resorting and cleaning of articles coming into this country from foreign ports. For instance, olive oil, which is imported in gallon cans, can be repacked in pints and quarts. Case goods containing four to six dozen tins can be repacked into cases containing one or two dozen, as the trade demands. Bulk shipments can be broken up and repacked into small containers.

CHICAGO MARKET

Michigan Berries Going Freely at the Low Price—Iowa Canners Warned Not to Book More Futures—Wisconsin Peas Relieve Chicago—Packing Oranges in Florida—Preparations Being Made for Canned Foods Week—Heavy Business Predicted by Grocers.

By "Wrangler,"
Special Correspondent "The Canning Trade."

PRICES ADVANCED— It is learned that the large canners of California have again advanced their price on several varieties of fruits. This now is the second advance since the opening price. It is also learned that the pack of canned salmon for this season will be greatly decreased by the new ruling of the Federal Agricultural Department in the interest of the conservation of salmon.

Michigan Berries—Black raspberries and red raspberries are being canned in Michigan and the prices are opening low. Black raspberries, No. 10 cans, in juice, are being offered at $7.25 per dozen, f. o. b. cannery. The asking price for Montmorenci cherries in No. 10 cans, f. o. b. Michigan cannery, is $8.25. Blackberries, or dewberries, as they are sometimes designated, in No. 10 cans, juice, are priced at $7.25, same price as the black raspberries. All these goods in No. 10 cans are selling freely, and the canners of Michigan are offering them freely, as they are not inclined to speculate or hold for a higher market, although they anticipate higher prices later on.

A good crop of pears has been raised in Michigan, and there will be a fairly good crop of peaches, but prices have not yet been definitely named on these fruits.

None of the canners in Michigan are offering canned peas, as they all seem to be sold up on the new crop and have practically withdrawn from the market.

Canned Tomatoes—Stocks of canned tomatoes in wholesalers' hands are practically exhausted in Chicago, and the shipments of new crop are anxiously awaited. It is realized, of course, that this will be some time later; but the wholesalers are not inclined to pay the price on 2s which is now being asked by Eastern canners. Neither do they seem inclined to buy the 3s, which seems to be the size contained temporarily out of the market demand.

Canned Corn—The canners of Iowa are being warned by the State Association of that State not to sell any more canned corn for future delivery until the crop is definitely developed and they know that they will be able to deliver.

They have already sold for future delivery of the 1924 output more canned corn than was packed by Iowa last year, and although the acreage was somewhat increased this year, weather conditions and the replanting of a lot of the acreage makes the definite amount of the output of canned corn a little dubious.

This market is well sold out of the 1923 pack of canned corn in second hands, and the wholesalers are buying in small lots wherever they can find it in first hands and buying some for immediate delivery from each other.

Canned Peas—Some of the earlier shipments of canned peas from Wisconsin have already arrived in Chicago, and have proved to be of good and satisfactory quality. They have given great relief to this market, which was practically sold out of canned peas of the 1923 output. Shipments will be coming in regularly now, and this new stock arriving will initiate renewed activity in business.

Something New—A new article or novelty in canned foods is about to be introduced, viz: canned oranges cut in sections and sliced, packed in natural juice, not in syrup. Samples of this article are being shown now in Chicago by F. Burkhardt, manager of Poms Canning Co., Clearwater, Fla. I have seen a sample of the canned oranges, and the fresh color, flavor and quality generally is excellent. The goods are sufficiently sweet in their natural juice to be perfectly edible, and are not packed in syrup on that account, as the canner seems to think that the use of syrup would somewhat detract from the natural flavor, the retention of which is desirable.

This cannery has been operating now for nearly two years, and has been packing grape fruit very successfully and of acceptable quality. The canning of grape fruit was begun several years ago, and at first the article was so popular that the canners could not supply it in sufficient quantities; but a large can-

ning establishment in California undertook to supply the market, and it seems that the California pack was for some reason unacceptable and had to be closed out at a low price. This demoralized the market, and it is just now regaining its prestige through the efforts of Florida canners, who are packing fine quality.

It seems that an attempt to pack grapefruit in enamel inside cans was disastrous, as the strong acid of the grapefruit dissolved the inside enamel and ruined the flavor; therefore, it is now packed exclusively in plain inside cans, the enamel not being used.

The enamel would not be essential in canning grapefruit, as there is no necessity for the preserving of its color, which is naturally pale. However, in canning oranges the use of the enamel inside cans is essential for the preservation of the golden color of the fruit, which the enamel does, as was exemplified by examination of samples by me. The acid of the orange does not concentrate on the enamel like the acid of the grapefruit, and does not cause pinholing.

It might seem that the canning of oranges, when the fresh article is so abundantly on the market at nearly all seasons of the year, would be impractical, but the great convenience of the canned article ready for immediate use, the outside peel and the white inside peel being removd, all trouble of preperation being avoided, goes to show that for salads and tea-table dessert canned oranges are going to prove acceptable to consumers. The article will be placed on the market very soon.

P. J. Murphy, of the Deming & Gould Co., Chicago, has been appointed by the National Food Brokers' Association general representative for the organization of committees and distribution of literature in relation to Canned Foods Week, November 8 to 15, 1924, and he is now hard at work organizing committees all throughout the United States.

Wholesale grocers of Chicago are predicting a very heavy distribution of canned foods to the retail trade this fall. They have learned through the instrumentality of their salesmen that stocks in canned foods in retailers' hands throughout the Central West are very low, and that although retailers have not bought futures very heavily, the demand for prompt delivery of new goods of all kinds on arrival will be unusually active.

The wholesalers have also begun to realiez that the prices now being named on canned foods are probably the lowest prices that will be had this season, as neary all goods of every kind and description are reported to be in short supply, and canners knowing that this is the case are not inclined to shade prices.

CHANGING THE SHAPE OF THE SWEET POTATO

THIS may sound like a very difficult thing to do, but the New Jersey Experiment Station found a very simple method of doing it, and not only is it simple, but it is also a very cheap method. The whole secret is to have plenty of potash in the fertilizer.

During the past two years a number of experiments have been conducted in which fertilizers containing various amounts of plant-food ingredients—ammonia, phosphoric acid and potash—were compared with each other and with no fertilizer at all. The results show that, when the fertilizer contained 3 per cent of ammonia, 8 per cent of phosphoric acid and 8 per cent of potash, the highest yield and the largest proportion of marketable tubers were obtained. In one test conducted last year some of the results were as follows:

Without fertilizer the yield was 8.7 bushels of "firsts," 14.7 busheles of "seconds," a total of 23.4 bushels per acre.

With 1,400 pounds of 3-8-0 fertilizer (containing no potash) the yield was 73.1 bushels of 'firsts," 67.7 bushels of "seconds," a total of 140.8 bushels per acre; but

With 1,400 pounds of 3-8-8 fertilizer the yield went up to 152.6 bushels of "firsts" and 50.9 bushels of "seconds," a total of 203.5 bushels, and an increase for potash of 62.7 bushels per acre.

A large number of potatoes from each plot were measured carefully as to length and thickness, to determine the exact effect of potash on the shape of the tuber, although the difference was very evident, for the sweet potatoes produced with the 8% potash frtilizer were one-half inch thicker and one and a half inches shorter than those produced without potash, and the "chunk" type is most desired in the market.

What Canned Foods Distributors are Doing

Direct Buying By Retail Grocers' Cooperative Exchanges Looms As Next Big Trade Issue—American Association Recovering on Overpaid Freight Bills of Jobbers—National Pledges Cooperation in Canned Foods Week Movement—The "Bucketeer" Broker.

CO-OPERATIVE BUYING—Co-operative buying of canned foods and other grocery products by organizations of retail grocers threatens to become the next important issue of the grocery trade.

As mentioned in these columns recently, discussion of co-operative buying by retail grocers was one of the outstanding features of the recent convention of the Retail Grocers' Association of the United States at its recent convention in Los Angeles.

The New York State Retail Grocers' Association meets at Buffalo, August 4 to 7, and it is stated that one of the features of the convention will be the discussion of ways and means of further developing the co-operative buying idea for retail grocers. Several co-operative buying organizations have been in successful operation in various parts of the country, particularly in Brooklyn, New York, and the business of these "co-ops" has grown steadily.

Wholesale grocers, of course, are opposing the spread of the co-operative retailers' organizations, but many manufacturers have recognized the larger and established co-operatives as legitimate wholesale buyers. The contention of the retail grocers is that they must be in position to buy on a parity with the big chain stores if they are to continue in successful competition with them.

Some alarmists profess to see in the spread of the co-operative idea the doom of the wholesale grocers in the territories affected. This has not proven the case in localities where the retailers' buying exchanges have organized and successfully operated. It has eliminated some of the wholesale grocers, but the more logical effect of the establishment of such exchanges has been the consolidation of wholesale grocery interests, with a resultant lowering of overhead and increase in efficiency. In many localities the retailers' exchanges have developed into good

customers for the wholesale grocers on some lines, although it is logical to suppose that the retailers will buy direct wherever possible.

Then, too, the buying exchanges, as a rule, do not handle the complete line of groceries, and there is always a certain amount of business coming to the wholesale grocers from the retailers who are members of their local buying exchanges.

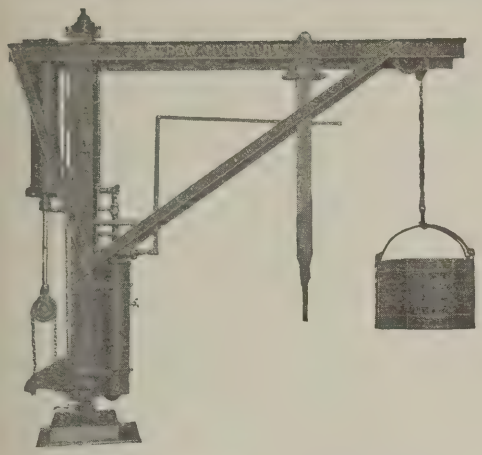
In the larger cities many of the wholesale grocers are large importers and manufacturers of private brand merchandise, and as such find the exchanges good customers for their specialties, particularly in instances where they have established their brands.

While it is not denied that the retailers' buying exchanges constitute a menace to some part of the wholesale grocery industry, the outlook is not as dreary as some pessimists in the trade seem to feel. Rather, the present trend of the retailers toward greater co-operation spells greater competition for the chain stores.

American Association's Traffic Work—R. H. Rowe, Secretary of the American Wholesale Grocers' Association, writes: "With the removal of our headquarters to Washington, D. C., we desire to announce the following change in the direction of our traffic department. T. D. Guthrie, who has for some years served us very efficiently as our traffic manager, is no longer with the association, having assumed the position of traffic manager of the Jacksonville Traffic Bureau. Harry S. Elkins, of Washington, D. C., becomes traffic manager of the Association. Since our traffic bureau was inaugurated four years ago, the work has grown steadily, and the service has commended itself to the wholesale grocery trade throughout the country. We are now in close personal contact with the Interstate Commerce Commission and can serve you in all traffic questions. We have every facility for checking freight bills. We make a charge of 35 per cent of the actual amount of overcharges collected. This charge represents the cost, or, indeed, a little less, of performing this service, it not being the intention of the Association to benefit financially by this service. Already thousands of dollars of these overcharges have been collected for wholesale grocers which otherwise would have been lost to them."

Canned Foods Week Plans—M. L. Toulme, Secretary of the National Wholesale Grocers' Association, discussing canned foods week plans, after outlining the co-operation promised by the National Canners' Association, says: "The National Wholesale Grocers' Association will, as always, participate in and push along this movement to extend the market for canned foods and further educate consumers regarding the undoubted merits of canned foods. The Canned Foods Week Committee of the National Association is now at work selecting local chairmen for the November effort in behalf of canned foods. An attempt will be made to organize the largest number of markets yet, and so make the selling and educational campaign as successful as possible. Leslie Lieber, of the Hass Lieber Grocery Co., St. Louis, who has handled this work so successfully for the National Association in the past, has again agreed to serve as general manager of the Canned Foods Week Committee. Wholesale grocers are hereby notified of the November dates and are urged to start making plants now for assisting Mr. Lieber and making the forthcoming campaign a pronounced success."

Returning From Europe—Arthur P. Williams, president of R. C. Williams & Co., Inc., is due back in New York on the steamer Paris on Saturday, after a six weeks' European trip.



Want Consent Decree Upheld—"The time is here when every wholesale grocer in the country must do his part to help the Government, the American and National Associations, win the fight to hold the Consent Decree valid," according to the Arkansas Wholesale Grocers' Association. "We fear that too many are leaving it to the other fellow to do the work," continues Secretary Linthicum, of the Association. "All must work and keep at it until the United States Supreme Court has held the decree valid. The meat business of this country is now in the hands of about four large concerns. That is where the business of all food products will be if the decree is made 'a scrap of paper.'"

Canned Foods Bucketing—Some complaint has been heard recently of the activities of the "Gimme a bid" brokers, who, fortunately, are in the minority in the brokerage fraternity. Some wholesale grocers have unknowingly aided these brokers, and now would be a good time to put a stop to the activities of such. Many wholesale grocers are familiar with the stock market; many of them operate to some extent. Very great care is taken by them to make sure that they are not dealing with a "bucket shop," a house which will take the order and gamble on their knowledge or professed knowledge of market developments. If the market goes up, and the buyer gives a selling order, the "bucket shop," which has never actually executed the order, is the loser, and pays the buyer his original investment, plus whatever the stock has advanced, after deducting "brokerage" which has never been earned. If the "bucket shop" is short and the market goes up, the buyer often as not goes without either his profits or his original investment. If the market goes down, the "bucket shop" is the winner. Somewhat similar are the "bucketeers" of the brokerage fraternity, denounced not only by buyers and sellers, but by the great mass of legitimate brokers as well. The "bucketeer" of the brokerage trade, in a dull market, decides to stir up a little interest, and incidentally make some money for himself. He will quote a buyer a price under the market, get a bid at the cut price, and submit the "firm" order to some packer who may be in momentary financial distress. If he cannot locate a seller, he will tell the buyer that the canner who "quoted" the original low price has "laid down" on the transaction, and the buyer harbors some feeling against a canner who in all probability knows nothing whatever of the entire transaction. In many instances, however, these "bucketeers" are successful in driving the market down. The damage to the canner is obvious. The buyer likewise suffers, although not as greatly. The buyer is given a false impression of the position of the market by the low price quoted by the "bucketing" broker, not knowing that the offering put up to him is not bona fide. Thus the buyer many times permits his stocks to run short, banking upon the fact that the market weakness indicated by the broker's activities is actual. Recently the salmon packers have suffered from the activities of a few operators of this sort, leading one prominent packer to advise the trade to "buy all you can at the low prices given you, but be sure that the man from whom you buy has something to sell." There are plenty of legitimate brokers in the business; indeed, some say the field is overcrowded as it is. It would be better for canner, broker and buyer alike if the "bucketeer" of the canned foods brokerage fraternity were weeded out as soon as possible.

Retires—Harry C. Bubb has retired from the wholesale grocery firm of George Bubb & Sons, of Williamsport, Pennsylvania. Mr. Bubb was succeeded by his son, Hugh J. Bubb, who with John H. Bubb and H. B. Bubb will continue the business under the same name. The firm was originally organized as Corcoran, Weaver & Co., in 1869, the name being changed to the present firm style in 1890.

SMILE AWHILE

BUT NOT HARD-BOILED

Buck had wandered far from his usual haunts near the army cantonment and had entered a strange restaurant without noticing the warning sign: "For Officers Only." The waitress sought to enlighten him.

"Officers only," she said, somewhat harshly.

"Well," returned Buck, "if that's all you got, bring me one well done."

OLD FOES ARE BEST

Pat was hard hit and sinking rapidly, so a chaplain was summoned.

"Pat," he said, gravely, "you are about to go west. While you have time you must renounce the devil."

"Father," replied Pat, "if I'm that bad off, 'tis in no condition I am to be after makin' new inimies."

JUST WHAT HE WANTED

The lady shopper had ordered about everything hauled down from the shelves.

"I don't see just the right thing," she decided at last. "I want to surprise my husband on his birthday."

"Well," suggested the exhausted clerk, "why don't you hide behind the chair and yell 'Boo!' at him?"

PLASTERED

"Bill calls his flivver 'The Covered Wagon.'"

"How's that?"

"Because he's got a mortgage on it."

HIS DAY OF REST

Two brunette Alabamans were sunning themselves on the curbstone.

"Looky hyah, useless," orated one. "Yo'all jes' a ornery, wallowin', sun-soakin' no-account. Ah's got a job! Yassuh! Ah puts de mahkin's on de tiles down ter de new Mah Junk fact'ry."

"Huccum yo' talk so big? Yo' ain't doin' nothin' now."

"Ig'rance, button up yo' mouf. Today us mahks de white dragoons."

IN DISGRACE

Mrs. Murphy—"Sure, an' I'm ashamed of Pat. He has to go to coort on an assault an' battery case tomorrer."

Mrs. Casey—"An' is that annythin' to be ashamed of?"

Mrs. Murphy—"Be the powers, it is when he's only a witness."

VALUABLE

An opulent-looking man drove up to the curb in a car that was not so opulent-looking. Immediately he was accosted by a small boy.

"Watch yer car fer a nickel, mister."

"Beat it, kid. This car of mine won't run away."

"Nah, but I kin call yer when it starts to fall apart."

WUFF!

Rufe—"Yo'-all don't look danjurious to muh. F'um whah Ah comes it was so tough dey done wean pickaninnies wif chewin' tobacked."

Abe—"Yo' sho' comes f'um a peaceful village. Down mah 'own in Tenn'see dey pick de flowahs wif claw-hammahs."

SARCASM

Woman (rising in street car)—"Won't you have your seat?"

Man—"My seat?"

Woman (sweetly)—"Why, isn't it yours? You occupied it all the way down town yesterday."

EDITORIALS

PLAYING THE OSTRICH—They say that the ostrich, when tired and wishing to elude his enemies, will stick his head in the sand, and, being unable to see others, believes that others cannot see him. What an intensely human trait that is? Just look about you and see the number of men who act like the ostrich. You will find them in all walks of life, simple folks out of touch with even their own little world, and who believe that all other men are as innocent and as little informed. Guileless men who believe all men are guileless. Canners, for instance, who had a small carry-over of tomatoes this spring, who were told that "there are lots of tomatoes being held," and having some themselves they believed this information without question and without knowing whether or not the informer knew anything definite, and, worse still, that he may have been anxious to buy to his own advantage. Isn't that the reason why spot tomatoes—and futures—have ruled so low in this immediate section of the East, particularly? We think so. If these men had been readers, seekers after every bit of information and knowldge of their business that was obtainable, and if they had cultivated the habit of careful scrutiny as to the source or intention of their information, would they have acted as they did and are doing? We doubt it.

And then as to present conditions as applied to oncoming crops. Old Dame Nature is apparently trying to make up for some of her lateness, and crops are "humping themselves" under present weather conditions, coming on in excellent fashion. Each individual canner, in his own particular section, is noting this, but "keeping it to himself," playing the ostrich, in the belief that his improving crop conditions, if known, would hurt the market. He is but fooling himself, because those crops must come upon the market, must be made public, and if they prove better than the market has been led to believe he simply puts himself in the position of being called a liar. Not that he is a liar, because he knows the uncertainty of crops, and he has meant to be honestly careful, but the buyer who finds his market oversupplied when he expected a short supply brands him as such, and refuses to have further confidence in him.

The canners and canned foods do not come within this category this year, because it is our belief that the packs of canned foods cannot be overdone this season, especially if they are quality pack. The crops of the two great staples, corn and potatoes, cannot be "big" even under a continuation of most favorable weather conditions, and, what is more to the point, even if they were big, and the packs with them, the market is so empty that it cannot be overpacked.

We mention this here merely because it is a good time to bring home to every canner the need, the wisdom, of being well informed upon the condition of canners' crops in all other sections; of the need of reading every bit of news or information on market conditions, etc., and of not relying upon their own limited information, much less the information of an uncertain, possbily interested, source. If that lesson were ever learned by the great mass of canners the marketing of canned foods would be an entirely different proposition to what it is today, and we need hardly have to add very much to the benefit of the canners.

CHILD LABOR LAWS—We have had some inquiry as to the Child Labor Laws as applied to the canneries, and for that reason are publishing this week the Maryland law and the hours which women may be worked in canneries. These laws, we think, are very similar to the laws of other stats, and will, therefore, act as a guide to our readers. The one thing to keep in mind is that they are attempting rigid enforcement of these laws in every section. The canners do not want children in the factories, and won't have them; but the framers of Maryland's laws showed their ability as business men in making canning an exception to the hours of labor. They knew that Nature does not limit her hours of production of the crops, and they knew that if the canners were to conserve these products of Nature they must work as the crops ripen. They imposed restrictions, very properly, but they did not make these restrictions unreasonable. Maryland lawmakers are drawing the favorable attention of the world through the careful avoidance of excesses one way or the other, and for the saneness and pure Americaness of her laws.

MECHANICAL TESTING FOR SLACK FILLS—Recently one of our daily papers had an extensive illustrated article entitled "Maryland Canneries Share in U. S. Test." A reading of this disclosed the fact that the Bureau of Chemistry had devised a new mechanical tester for slack filled cans. In art the article said:

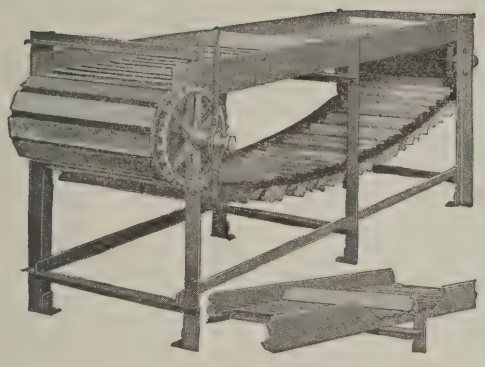
> "Heretofore the inspectors of the Bureau of Chemistry have had to depend upon a very cumbersome plan of draining and weighing contents of the cans. Not only is this a rather crude way, but one consuming a great deal of time.
>
> With the little instrument that has just been perfected the inspector not only can speed up his work, but can report results far more accurately.
>
> The device is a very simple one. It consists of a perforated, circular brass plate three inches in diameter, to the center of which is screwed perpendicularly a brass rod one-quarter of an inch square. On one side of the rod is a scale graduated in inches and sixteenths of an inch.
>
> When a can has been opened for sampling by the inspector the measuring instrument is pressed down lightly on the solid contents, the liquid portion rising through the perforations. A straight edge then is placed across the top of the can and the reading made where it comes in contact with the brass rod. If there is too much liquid in the can the inspector will take the matter up immediately with the cannery officials.
>
> **'Fill of Can.'**
>
> For every fruit, berry and vegetable, practically speaking, there is a proper 'fill of can,' as the scientists at the bureau call it. The housewife who finds some liquid in the can she purchases should not form the idea immediately that fraud is being perpetrated upon her, for these same scientists give assurances that it is necessary for the canners to put in a certain amount of syrup or brine with each such product in order to obtain good results."

If there were but some yardstick by which the canners could fill all cans to the exact right amount—"the proper fill of the can"—we can assure the Bureau that the industry would welcome it heartily. Of course, there may be some of the old school of slack-fillers left, hard as that is to believe in this advanced day, but as a rule slack-filled cans are not by design. Without an exception the cheapest thing about canned foods is the stuff with which the cans are filled. A lot of canners may not realize this, but it is true, nevertheless. So any sensible canner will aim to put the maximum of product in every can; but he must leave "head-space;" he must leave room for the brine or syrup, and he must take into account the shrinking or swelling of the product after cooking, and there is where the trouble comes. That is the one point where nothing mechanical will suffice. It all depnds upon the ripeness or greenness of the product, and the condition will change, not merely daily, but almost hourly, and that is where the fine art of the experienced canner comes in. For that there is no measuring rod but experience, and even then the most experienced fall down at times. And a hint to these inspectors might not be amiss to the effect that when they see a canner froth at the mouth when accused of slack-filling, don't think that he is just bluffing, that he has slack-filled purposely. He may have used his best efforts and felt proud of his accomplishments, until the inspector happens upon the unlucky lot of cans which went wrong just to prove the rule. It all depends upon the canner, of coursre; but if he has proved himself honest in other matters the inspector may "lay to it" that he was honest in his efforts to get a good fill.

BREAKFAST FOOD FOR THE CHINESE.

American Firm Adapts Novel Methods to Popularize Its Product—Dried Fruit in Penny Package Goes Big.

That the purchasing power of the Chinese masses is higher than generally supposed seems to have been effectively demonstrated in the successful and profitable introduction into China of a number of foodstuffs as well as other articles of commerce, purely American, says Commercial Attache Arnold, Peking, in a report to the Department of Commerce.



Several decades ago the idea was conceived of educating the Chinese to the use of tobacco in the form of cigarettes. Through enterprising methods of advertising and salesmanship the cigarette consumption in China has increased to between forty and fifty billion per year.

A California firm manufacturing a certain dried fruit has demonstrated the fact that it is possible to market its products to a very large degree in China. In fact, it is understood that a large percentage of the products of this manufacturing firm is now marketed in China, the aggregate sales being nearly $1,000,000 gold a year. This dried fruit in penny packages is finding its way into the shops of the interior cities throughout the country, notwithstanding the fact that it is not a necessity.

An American firm manufacturing a cereal product is also meeting with considerable success in marketing its product among the Chinese. It has prepared cook books in Chinese, and also much other Chinese illustrated material helpful to the introduction of their product in such a way as to meet the peculiar demands and ideas of the Chinese people. Probably no people on the face of the earth have so varied a dietary as have the Chinese, and probably no other people have such an extensive menu as has China. This success is the development of the work of thousands of years, and the Chinese cook is more of an artist than artisan. The Chinese people are, therefore, distinctly receptive to new ideas in connection with food products. It must be borne in mind, however, that these products must be served in such a way as to be pleasing to the palate of the Chinese. For instance, a breakfast food would make no headway in China if it had to be served with milk and sugar, the way it is consumed in the United States. The success of its introduction in China depends upon adjusting it to meet the taste of the Chinese, and this is being successfully done.

Hence it is necessary, if one is to make any headway in the introduction of American food products in China, to work with full knowledge of the peculiar conditions obtaining in that country. This means that the field must be investigated at first hand by competent persons and the distribution must be in the hands of those who are peculiarly fitted for work of this char- campaign adapted to Chinese conditions is necessary. acter, and a modern advertising and salesmanship

INSPECTION, GRADING AND SORTING TABLES.

The latest is the Inspection Table, the one that turns the tomatoes over every four feet. These units are to be had in eight ft. sections to make any length desired.

With the use of our Grading Table (another late arrival in the field) your quality will be greatly increased. Tomatoes smaller than 2⅛" in. diameter will go direct to the pulp line, and are not crushed by the peelers as a cull.

We also build Sorting Tables any width or length, using the Hercules, woven wire or rubber belting to suit the reqnirements.

Mono - Piston Filling Machine

for Mustard - Salad Dressing, Mayonnaise, etc.

A wonderful little machine that admirably fulfills the need for a satisfactory filler, of moderate price, for the above products.

It fills a solid pack from the bottom up.

Quickly adjusted for different size containers and readily cleaned for different products.

It is a precision filler of minute accuracy and this accuracy is *permanent* regardless of wear.

Made of monel metal.

Write for full details.

OREGON'S REMEDY EOR FARM ILLS

By Frederick Simpich, in "The Nation's Business."

OREGON is given to bold brain throbs, to virginity in thinking. More than once she has turned from the stale political tripe, offered by second-hand minds, to prescribe for herself.

Lately she has done some snappy mental setting-up exercises on the problems of agriculture. For, like every other farm state, she has farm troubles. Her fruit, stock and grain growers are men of sorrow, acquainted with grief. Also, these farmers have the earache, and are bewildered. Many voices are in the air.

To Oregon, as to every farm state from coast to coast, has come an avelanche of advice, wise and otherwise.

Culled from this chorus of contraductions, here are a few of the criees that bothered Oregon, just as they bother Kansas, Kentucky and Georgia. See how confusing they are, paired and posed, the ayes against the nays, and who to say whether the ayes or nays "have it."

Congress must act to save our agriculture. Laws can't save the farmers.

Grow more of what Europe wants. Grow less of everything. Give more farm credits. Give less; too much hurts—look at the Northwest! Crucify the middleman; everybody co-operate.

"You can't," says the economist. "He's a part of the works; he brings city skill and capital. How could a farmer growing onions in Texas drive a delivery wagon in Chicago?"

Raise the tariff! Lower the tariff—the farmer's sugar costs too much. More duty on Canadian hard wheat.

Yes, and your bread will cost you more," objects the baker.

Back to the land! Back to the city! "Raise the import duty on cattle," Texas cries. "Take it off," urges Iowa—so we can import feeders from Canada.

Millions for irrigation—more open spaces for would-be farmers.

Stop it—too much land is already plowed.

Oregon heard all this and more. She heard people say that even the farm bloc is baffled; that it knows now how hard it is for a vast land like ours to find and follow any one fixed national farm policy. We are so big.

Too big! Distance is one difficulty. "Cut the freight on fruit!" Idaho demands, "so we can ship east." "Don't," begs the apple man in New York—or West Virginia—"you'll ruin us."

This conflict of interests, political and economic; this friction between competitive geographical areas—north against south, east against west—all these clashes are factors in our national farm problem.

"Diversify," Oregon heard people say. "Diversify, you one-crop men. Save yourselves with fruit, with sacrificial swine, the prolific hen, and the playful, unsuspecting lamb."

"Don't diversify!" Why? Well, look at Georgia. When she was a one-crop cotton state she had to buy —let us assume—much meat, butter and mules from Missouri. But now, we hear, Georgia is diversifying—growing millions a year worth of new stuff that she never grew in her cotton days.

"Good for Georgia!" some cry. "Yes, but rough on us—we've lost a good market." Who says that? Why, the Missouri people; or the Iowa or Indiana people who—till Georgia "diversified—used to sell her bigger orders of meat, butter and muls.

Even in their sleep Congress, our Department of Agriculture, our bankers and economists, hear 34,000,000 farmers cry for help. Now and then—in this clamor—the "nays" detect a false note.

"Seventy-five per cent of our farms are mortgaged," one state complains.

"So are 90 per cent of all homes in Washington, D. C., and probably also in Keokuk, and Tucumcacari, Arizona"—the nays respond.

"The average farm profit last year was under $800" we read.

Millions, toiling in cities, couldn't save a cent!

Interesting, if true, admits Oregon. Anyway, put it all in the evidence, and let us ponder it. Up here amid the big trees, the waterfalls and leaping salmon the pondering is fine. Part of these bucolic wails are goat feathers, and tickle our ears. But much is fundamental. Economic changes are sweeping the world. There must come new adjustments, not only between farms and cities, but among the states, as farm units.

Policies, too, must change, says Oregon, until now, for example, our "ag" schools, our Government, have taught us only how to grow more. Not what to grow, nor how to sell it. We've worried a lot at the point of production, and thought too little about conditions at the point of consumption. Hence these cries of pain.

But the cure? Perhaps Oregon will find it. Certainly, her exeriment is very business-like. It is worth reading about.

It was to start on a new basis of investigation that Oregon's now much-talked-of Farm Economic Conference was held in January last at her agricultural school in the little town of Corvallis.

Primarily the conference was called to work out a program for the limitation and control of farm production in Oregon, and the adoption of comprehensive market methods—in the carrying out of which all agencies in Oregon are to unite.

Because Prof. Paul V. Maris, Extension Service Director of the Oregon Agricultural College, took a leading part in this undertaking, many call it the Maris plan.

At this conference committees of specialists worked out careful surveys in all major branches of farming, fruit growing, stock and poultry raising, with minute attention to market problems.

We will no longer proceed blindly, the conference declared, by old hit-and-miss methods in which every farmer or stockman groped alone. From now on we shall analyze every step. To develop Oregon's agriculture, and preserve a sane balance between production and marketing possibilities, we shall mutually agree to study every kind of crop, and every sort of livestock and poultry activity, not simply to determine and be guided by its relation to Oregon agriculture as a whole, but by its relation to farm activities and production in competing states.

With all production facts before it, the conference made a thorough survey of consumption of farm produce, commodities and foodstuffs in Oregon, to see just how much of each product must be sold outside the state. With this question answered, it took up the study of transport, of competition and market methods.

Butter making, for example, is an important industry. Oregon makes more than it eats. It therefore has butter to export. Certain nearby states, however, make less than they consume. Obviously, there is Oregon's market.

But, says the committee's report, although demand is great in neighbor states, they demand a high scoring butter. And a very small proportion of the butter produced in Oregon can be classed as better than average, and much of it is low." . . Hence, concludes the experts' report, Oregon can sell more butter at a higher price by making butter better.

It then shows, in detail, how present conditions can be improved to produce a higher grade of dairy products. For example, it reveals that on dairy farms only 48.7 per cent of the dairy bulls are pure-bred, leaving 51.2 per cent of scrubs in use. It shows that some dairymen buy 40 per cent of their cow feed, instead of growing more for their own needs, and that many who do grow ample feed are not growing the best kinds. Further analysis shows that most dairy herds are too small to earn maximum profits; labor and overhead on small herds are too high to give many owners more than a bare living. Increasing a herd, even by a few cows, decreases costs.

Furthermore, says the report, the production of more cream per herd means more frequent deliveries to the creamery, which means that cream would reach the plant in better condition, and make butter that would bring a higher price.

Going further, a great variation was found in the cost of producing milk. It varied from $1.80 to $4.00 per 100 pounds. Production per individual cow, then, becomes an important factor. The average production per cow in the state was found to be 168 pounds of butter fat. But, also, cost production studies showed that a cow must produce 240 pounds a year for the farmer to break even. Many who didn't know this wondered why they lost money when a neighbor—milking the same number of cows—sold cream at a profit. High production per cow depends on good ancestry and right feeding.

Because this dairy survey by Oregon is so thorough and businesslike, I quote a few of its recommendations:

An adequate system of cream-grading, rigidly enforced by law.

Minimum dairy herds of ten cows; for more economical production, increase to above twenty-five.

Keep systematic paper records of production per cow, by cow-testing associations, thus to weed out unprofitable animals.

By county campaigns, increase the use of pure-bred bulls and dispose of scrubs.

Feed dairy herds only leguminous hay; the basic idea being that dairy farms should grow all their own feed, except perhaps a few feeds for special purposes.

Advertise and encourage boys' and girls' farm club work.

Oregon fruit men have lost heavily because, in boom days, thousands of trees were planted with little thought of what might be done with the fruit when the trees began to bear.

"Plantings were guided more by fancy than reason. Many thought that the more apples, prunes and berries planted, the greater would be their prosperity."

America's fruit crop has increased over 61 per cent in the last seven years.

Oregon, with so much invested in orchards, took a nation-wide view of the fruit market. We are now eating all the fruit we can hold, dietitians say. So our fruit consumption will probably increase, in future, no faster than population.

Oregon's conclusions may be bad news for promoters of orchard land projects. Nevertheless, the report says, we now have enough apple trees. In fact, and briefly, it figures that apple tree plantings in America should be decreased by more than 3,000,000 annually.

Whether Oregon should share in general future apple tree planting depends on what other apple regions do. Heavy plantings in eastern states might prove disastrous to new orchards in Oregon. Only in special cases, it seems, where conditions are very favorable or necessary to complete an economic orchard unit, is more tree planting now to be recommended.

It is no secret, says the report, that Oregon's per acre crop of apples is too low for profit. For the past three years it has stood at 113 boxes per acre; to be profitable, in general, an orchard should yield at least 150 boxes. Good management can make some orchards pay that now lose; but those hurt by frost, tree pests or drought, or those which stand in poor locations, may never be money makers.

Many failures are due to absentee ownership. Fruit-growing calls for all the time and attention of experienced men. Promotion schemes, by persons interested in exploitation rather than in profits from fruit, have been the cause of much loss in Pacific Northwest orchard investments.

To put Oregon orchard men back on their feet, the conference urged many reforms. Here are some of them:

Federal licensing of all distributors.

National advertising.

Boost sweet cider as a beverage on some basis that will not violate the prohibition laws, thereby recovering a market for millions of bushels of apples which, since the dry law, have been needlessly wasted.

Investigate bulk shipment possibilities and present grading methods.

Find whether west-bound refrigerator cars cannot be used to augment railway revenues, in order thereby to get lower rates east.

The whole world is too full of prunes, says Oregon.

Our Pacific Coast has a 100 per cent monopoly on dried prune production in America, but it grows too many little ones. And no American eats enough prunes—to please the growers. We now eat only one and one-half pounds each per annum.

At the rate they're picking and drying them now in the three coast states of Washington, Oregon and California, we'll have a surplus this year of 135,000,000 pounds. In five years more, when young trees grow up, our surplus will be close to 226,000,000 pounds! That's a lot to find a market for overseas. When you stop to think that France alone grows maybe 65,000,000 pounds!

Wherefore, says the Oregon Conference, America must grow bigger prunes, and eat more of them.

"We recognize," says the report, "that no organization now controls a sufficient volume of prunes to establish prices, to market and advertise." . . Therefore, this body favors an organization to:

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

1. Establish uniform grade and pack.
2. Establish a uniform trade-mark.
3. To advertise.
4. To develop a central sales agency.

In the same thorough way the Corvallis Conference took up other kinds of farm troubles.

In a careful survey of the whole state, it pointed out the various natural and economic limitations upon, or advantages in, the raising of different crops and animals in the various sections of Oregon.

It is urged potato men, for example, not to increase acreage, but to intensify, to seek heavier production per acre, to change to earlier varieties, and to grow high-grade potatoes for export as seed.

It fought weeds, and urged new laws to help to destroy them. It urged that where rented land is infested with serious perennial weeds, rental contracts shall provide for adjusted compensation to reimburse the renter for extra weed control work.

It found that Oregon—because of soil and climate—is peculiarly able to grow certain seeds profitably. Such seeds as clovers, alfalfa and grasses always high-priced and difficult to grow in many regions, can be raised easily and at a profit in many valleys of Oregon. These seeds, being small in bulk but worth many dollars a bushel, can easily be shipped long distances to states where none are grown. Missouri, for example, plants lots of clover seed for forage and fertilizing, but often a spell of bad weather spoils the crop for seed purposes.

Nobody can work out a sales plan good for all time, the report says. The world changes its ways too often. Fads and fashions constantly shift the demand from one thing to another.

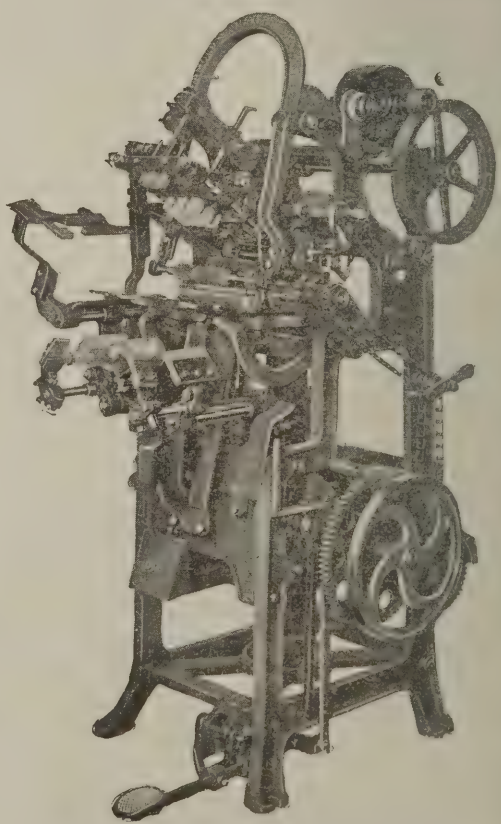
Advertising speeds up demand for one product and weakens it for another. Thrift campaigns slow up demand for things quickly consumed, and increases it for things used in production. Wars and their aftermaths upset supplies and demands.

Safe, sans plans to market farm products, then, can only point the way for the present and the immediate future.

To Oregon farmers—and all others—many market methods are open. The report describes them all—from peddling, public markets and parcel post to the latest highly organized private and co-operative integrated organizations.

But a system good for one farmer might not be best for another. How each man should sell depends on the character of his product, the time and place of marketing, cost of freight and the financial strength of the farmer.

It is urged, however, that whenever feasible farmers should market their products co-operatively. But in plain words the pitfalls of this system, when tried by untrained men, are pointed out.



"Fine!" you admit. Oregon is some torch bearer. The best minds, convened at Corvallis, did a good job. But how about the farmers? Will they, so to speak, keep step to all these new tunes? Oregon believes they will. Our farmers, she says, are mostly of earlier American stock, progressive, willing to quit the old for the new.

By chance, at the Reclamation Bureau in Washington, I met two splendid men of Oregon, Judge Dal-

A. K. Robins & Co. Inc.
Baltimore, Maryland

R. A. SINDALL, President

ROBINS ROTARY TOMATO WASHER.

ton Biggs, of the Ninth Judicial District, and R. H. DeArnond, a cattle rancher from near Vale.

When not on the bench, digging for law and precedents, the Judge digs potatoes. From his appearance I fancy he wields a wicked wig—on court days—and can loo kany potato in the eye.

"Ten years ago," said Judge Biggs, "I urged Oregon friends not to plant too many apple trees. They pointed to the growth of the cities, and increasing consumption per capita. . . Well, Oregon has now actually cut down thousands of apple trees. Not foolishly, at random, but here and there—by careful elimination of the least marketable varieties, etc—attempting to restore the balance between crops and markets that Professor Maris aims at.

Growing Crops to Demand—"By comparison, our sheep men may be better off than anyone else. Wool brings a good price. But here again we have our problems. America must import half or more of all its wool, and pays a high import duty. Now we have a large area of range that should be used, or we lose the income from one of our chief natural resources. Thousands of acres of this are best suited for running sheep. Why, then, shouldn't we run more sheep? Here is one place where the Maris plan may work well—by using to the utmost advantage the resources we have at hand in growing a product wherein there is no overproduction and command a price.

"You see, Oregon sheep go to Chicago—and Kansas City. But the average sheep man knows nothing of market conditions in these far-away cities, or what their trend, due to the state of the sheep industry in other states, is likely to be. So, if by a Maris-plan world survey or a national survey the Oregon sheep man might learn something in advance of probable future supplies, demands and price trends, he might be guided a bit—whether to grow big sheep for mutton or fine sheep for wool.

"Oregon takes Maris seriously. Undoubtedly his survey is helpful. As to what degree this plan will succeed nobody knows. But it's an interesting experiment, worth trying, a right step.

"For example, last spring Maris spoke at Ontario. Around there many farmers wanted to plant beans.

" 'Don't,' warned Maris. 'Everybody down the Snake River Valley, as far down as Twin Falls, is going to plant beans. Overproduction is inevitable. Raise corn.

"Maris was right, I think. Oregon now grows but little corn; much of the state is not fit for it. Some has to be shipped from Omaha; so we pay Omaha prices, plus freight. So we're growing corn, in the spots chosen by the experts.

"Also, as Maris pointed out, we have had to ship in red clover seed; so, at his suggestion, we are starting to grow some in the spots he pointed out as favorable for it.

"It is in telling us what production and consumption conditions are on the outside that also makes the Maris plan useful to Oregon. Take potatoes; Maris says raise early varieties. One season, before I'd heard about this, I dug my crop of 120 acres and shipped 'em east—only to get one cent a bushel more than I could have gotten at home. Next season I planted the early kind; I got them on the market at a profit, but in less than a week the price dropped 35 cents a bushel.

"To teach Oregon which of her products she can market ahead of similar things from competing states is one aim of the new plan. So it becomes a sort of clearing house for crop and market news."

Some city people are vexed at this cry for government aid to farmers. "It's class legislation," they complain. "Farmers demand money for farm credits, irrigation aid, and export schemes to help dump wheat abroad. Wouldn't it be just as logical to ask Congress to help the maker of farm machinery to export his product? Or to pension trapeze artists while the circus is in winter quarters?

I know a man in Missouri who owns 200 acres. Even before the war it was easily worth $20,000. He is old, and must rent. But $3 or $4 an acre is all tenants will pay. That's $800 a year, at most, and his taxes, federal and otherwise, are $360. That leaves him and his wife $440 a year to live on. They can't, but they must. Who is to blame for his plight?

In the meantime, Oregon turns from oratory and political tripe to a sound plan of self-help. Maybe, after all, that is the answer.

THE RIGHT PLACE TO INSURE QUALITY.

Roy Irons, Secretary of the National Kraut Packers Association, Tells His Members How to Save Advertising Money—Other Canners Would Do Well to Apply the Same Advice Themselves.

In a recent letter, sent to his membership, Secretary Roy Irons gave some good and true advice as to how to insure quality in the case. Read it:

We have received several letters from members commenting on the bulletin sent out July 3rd regarding packing quality kraut.

One member writes that the advertising should be backed up by quality kraut—that it is useless to advertise unless it is—that something should be done, or words to that effect.

We do not know of anyone who does not agree with this member. The very thing he says is and has been in the minds of all kraut packers, especially those supporting the advertising, and this is what prompted them to appoint a grading committee to work out definitions to define good from bad kraut.

The committee made their report at our Chicago meeting, April 22nd, and a copy of the definitions defining "good edible kraut" was presented and adopted. A copy was sent to all members. They were also published in trade papers, etc. It was said this was a wonderful step in correcting the evil that "kraut was just kraut."

This packer further suggested that the consumer be told the difference. This is a good suggestion. But if all kraut packers would pack only "good edible kraut," the consumer would not have to be annoyed with the responsibility of acting as the judge in the case. It is almost an endless chain to go to the consumer with such a serious matter. Many of them are not competent because they never ate kraut before—and to advertise, giving definitions, many never see it. Going at it from this angle, we agree with another packer that it would be "a slow and tedious process," who says in his letter as follows:

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

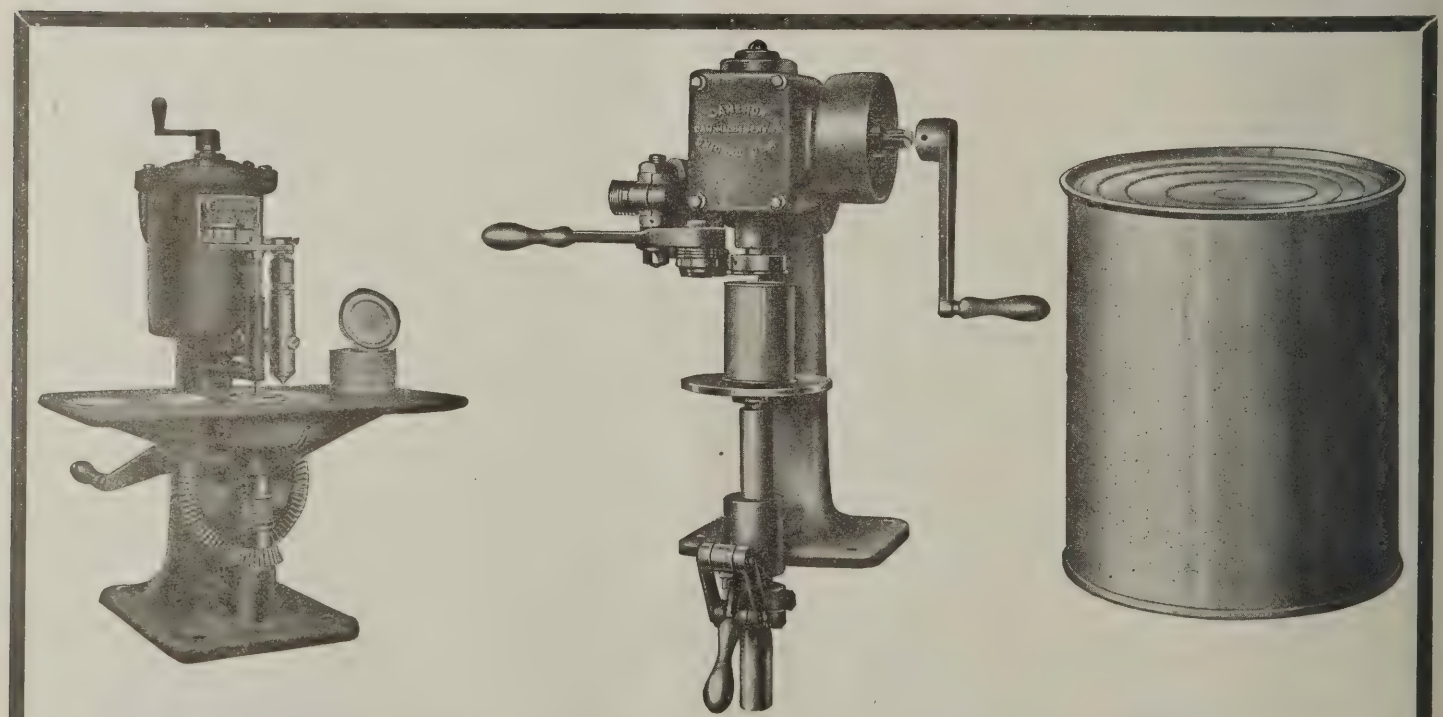
D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

"National Kraut Packers Association, Clyde, Ohio:

Gentlemen—

Your circular of the 3rd received in reference to the packers packing quality, and same is along the right lines. We think ourselves that a large number of buyers disregard quality. They don't know what quality kraut is. They think if it is white looking that is the principal thing, when, to our minds, the color is least important. Thorough fermentation, which produces a nice krauty flavor, and yet not objectionable, is what kraut eaters want, but their taste hasn't been educated up to it yet.



I was in one of the department stores here a short time ago that has a grocery department, and they were selling bulk kraut. I took some of that home and it was nothing but cabbage. When I bought it I asked the clerk if it was repeating well. He said he had fine trade on it; everybody liked it; but it was absolutely tasteless compared with our canned kraut which we opened right alongside of it. The same difference exists there that exists between beer containing 6 per cent alcohol and beer containing one-half of 1 per cent alcohol. The flavor of that kraut wouldn't impress you at all. It was a crime to have such goods go out, but apparently the housewives have got to be educated as to what is good and what is bad kraut. In time that will be done, although it is a slow and tedious process."

Those who are familiar with the way 6 per cent beer used to taste will readily understand the comparison made by this packer.

But note the clerk said he had a fine trade, and everybody liked it, yet the packer said it was practically tasteless. When these same buyers or kraut eaters once get hold of some real kraut they will tell the merchant to keep his tasteless kraut, and the merchant in turn will tell the packer. This will happen some day if packers pack kraut instead of cold slaw.

We firmly believe the place to correct this matter of quality is at its source. We do not believe it is a matter for the housewife to settle. If nothing but good kraut is packed, the space and expense of advertising in trying to inform the housewife how she can tell good from bad kraut could be more profitably used in telling her the health qualities, so she will buy it. If she has to buy and then go to the trouble to hunt up an ad, which she has misplaced, to tell whether it is good or bad, she will follow the path of least resistance and leave it up to her retailer, he to the jobber and the jobber to the packer.

Many kraut packers have said "that since the advertising has been running (generally speaking) the grade of kraut is much better than it was formerly." There is still a lot of room for improvement, and if the kraut packers have generally raised the quality in the last two years it is within their power again to raise the quality to such a degree that it will eliminate all the poor. How many kraut packers sent copies of the definitions defining "good edible kraut" to their brokers, so the brokers could show the jobber and the job-

CAMERON HAND OPERATED MACHINES

This double-seamer attaches bottoms to can bodies and covers to filled cans. The Compound Applier spreads the rubber cement on the edges of the can ends. These machines are suitable for cans from 2" to 6" in diameter and up to 9" high.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

For complete information write

LANSING B. WARNER, INCORPORATED
155 E. Superior Street,
Chicago, Illinois.

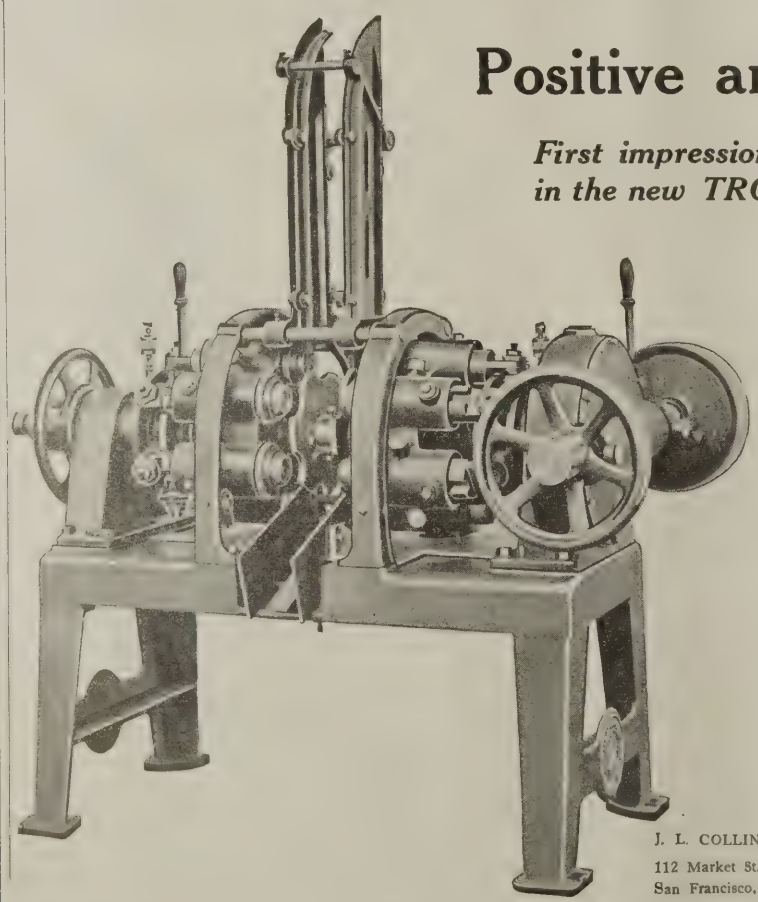
ber make copies for his salesmen, and they tell the retailer? There is much the packers have done and more they can do.

(A great deal of kraut has been carried over in tanks. When taken out this fall there is bound to be more or less spoilage on top. Take off all the spoilage. Don't try and mix some of it with the good and spoil it too, "just to save a little." If you can the kraut, take the original juice to fill the inner space. Don't throw away or sell the juice and use fresh water unless your kraut is very sour, then fresh water may be needed.)

As stated above, poor kraut is an evil to be corrected, and must be corrected at its source.

Quality is solely up to the packer. Produce it and 90 per cent of your business worries will be over.

WHY MIDDLEMAN?



"So long as there are hundreds of small manufacturers, and besides these large manufacturers, too, who cannot market directly, and so long as there are small retailers, just so long will business find the middleman's services necessary," declared Dr. Fred E. Clark, professor of marketing at Northwestern University, to members of the Chicago Advertising Council on December 6.

"The middleman is merely an example of specialiation in our business scheme," said Dr. Clark. "Goods are only half produced when they have been manufactured. The other half of the process is distribution. The expense of the middleman system often complained of arises from the highly specialized services that he has had to equip himself to render. He renerds services that are wanted. We have to pay for them. The real crux of the middleman problem is whether he shall continue as an independent organization or whether the work that he now does shall be centrally controlled by the manufacturer. When men who have specialized successfully in production get into marketing work they often find themselves up against it.

"The manufacturer who thinks that he wants to market direct must first count the cost very definitely. He is more than likely to underestimate the cost and the length of time it is going to take him to get going." —Printer's Ink.

NORWAY'S SPRING MACKEREL CATCH SHORT.

ALTHOUGH the prospects at the opening of the season were good, the spring mackerel catch of 2,865,980 pounds was short 50% of the 1923 figures up to May 31, and was exactly one-half of the 1921 catch of 5,731,960 pounds. Only 2,000 cases of soused mackerel have been packed in Stavanger houses as the short catch put fresh fish prices above the economic return line for canning purposes, according to advices received in the Department of Commerce from the American Consul at Stavanger. One-half of the catch was retained for domestic consumption. Of the 50 per cent exported, 220,460 pounds were canned, 661,380 piunds were salted in barrels, and 551,150 pounds were iced and shipped as fresh fish.

Positive and Simple Adjustments

First impressions gained by the can maker interestea in the new TROYER-FOX Six Station Rotary Flanger.

Add to this, long bronzed bushed slide bearings, for the cam actuated 3" diameter Flanging Die Pistons, and you have a smooth, even, drawn out, undamaged flange and a machine that will run for years with little cost for repairs or upkeep.

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Cross Junction, Va., July 28, 1924—The condition of tomatoes in this section is very bad. Not over 45 per cent of normal at this time of year. Canning will not commence before 1st to 10th of September. Very few setting out yet.

Wye Mills, Md., July 29, 1924—Not over 50 per cent of a normal crop of corn this year. The poorest I have ever had since I am in the business. Have about 40 acres contracted for.

Bridgeton, N. J., July 23, 1924—At present time there is one-half acreage of tomatoes we expected to have and about half a crop. Plants very small for this time of year. Do not expect to do any canning before first of September.

Gasport, N. Y., July 23, 1924—Apples around here 25 per cent of a crop. Mostly Greening and fall apples.

Peaches—Good crop.

Season is two weeks late compared with other years.

Newark, N. Y., July 24, 1924—Alaska Peas—Pack about 10 per cent above normal.

Sweet Wrinkled Peas—Estimate normal yield.

Wax and Refugee Beans—Crop looking well, but late.

Corn—Very late. Acreage less than normal.

Batavia, N. Y., July 28, 1924—Peas—In our section the early rains and cool weather, continuing up to time of harvest, have created a small yield of early varieties, and have kept the quality below what we should like to see. Although we have not sufficiently advanced into the late varieties to tell the outcome, we are not expecting more than a fair yield as compared with normal.

Corn—For the above stated reasons, corn has been subjected to the same undesirable weather conditions and has made little progress. We figure we are about two weeks late, at least, on this item, and we anticipate some fields of corn will not be touched at all.

Lebanon, Ohio, July 24, 1924—Corn—Our acreage is about 18 per cent larger than last year. After carefully taking into consideration all the factors bearing upon the canning prospect, we do not believe that we can expect more than two-thirds of a normal pack.

DeGraff, Ohio, July 25, 1924—Peas—Finished pack.

Early Peas—60 cases per acre, two-thirds of normal.

Late Peas—80 cases per acre, about normal.

Corn—Plantings late. Stand only fair. Need rain badly at present. Outlook bad for a large yield. Most favorable weather may make 75 per cent of yield.

Dunreith, Ind., July 24, 1924—Tomatoes—40 acres more than last year. Full three weeks late. Must have an extra late fall to get our futures.

Pendleton, Ind., July 24, 1924—Tomatoes—Fields are very uneven, as a rule. Earlier plantings doing very well. Late plantings not growing right. Whole crop about three weeks late. Must have a very late fall to make a good pack.

Norris City, Ill., July 19, 1924—Tomatoes—Crop is woefully behind, though the acreage is up to normal. Too much rain and cool weather in the spring; too much rain now.

Lanark, Ill., July 24, 1924—Corn—Stand very light and about three weeks late. Some only about ten inches high. An early frost will cut pack 50 per cent. Acreage same as last year. With the best of conditions we will make short delivery on futures.

Cedar Falls, Iowa, July 24, 1924—Sweet Corn—Our season is about two weeks late. We locally have a very good stand and I believe that we will have at least a 75 per cent crop.

Clarksville, Ia., July 24, 1924—Corn—Acreage same as last year. Ten days late. Some fields light stanl. Weather cool. Corn not growing any faster than usual. Will be very little packed before September 1st. Owing to replanting, 30 per cent of acreage planted two weeks late. We will quite likely get caught by frost. We must have a very late frost if we expect much of a corn pack. At present we are having too much rain and weather very cool.

Spokane, Mo., July 2, 1924—Tomatoes—Acreage normal. Plants set late and too much rain for proper cultivation. Also too much rain during blooming. Expect about 60 per cent yield if conditions are favorable during remainder of season.

Republic, Mo., July 25, 1924—Tomatoes—The condition of the crop is not over 80 per cent normal. We have been having entirely too much rain, and the growers are complaining that their vines have but few tomatoes set on.

Onarga, Ill., July 28, 1924—Corn—Due to the unusual weather conditions this season, it is almost impossible to give a reliable estimate of what our yield of corn may be. However, during the past three or four weeks weather conditions have been very favorable, and consequently the corn has improved to such an extent that aside from being from ten days to two weeks later than usual, conditions with us are practically normal.

NEWFOUNDLAND LOBSTER CATCH REPORTED SMALL.

THE first catch of lobsters coming in from the Newfoundland Coast is reported to be very small, in fact, less than 50 per cent of last season's catch at the same time of the year. Good prices, however, are prevailing, and during the third week in June freshly canned lobsters were selling at St. John's at $24.50 per case, reports the American Consul at St. John's in advices just received by the Department of Commerce. The rough weather about the middle of June has greatly interfered with the work of the lobster fishermen, but it is also assumed that the number of lobsters this year is not so large as last. It is interesting to note that the same conditions apparently prevail off the Maritime Provinces.

Peerless Field Service

Peerless Field Men are at your call all during the season

They prevent trouble by educating your help in the proper care and operation of Peerless Huskers.

After the initial call, Peerless Field Service men remain in your locality ready to serve you when you need them, and visit you frequently during the season.

This is only a part of Peerless Service. Let us tell you the rest of the story.

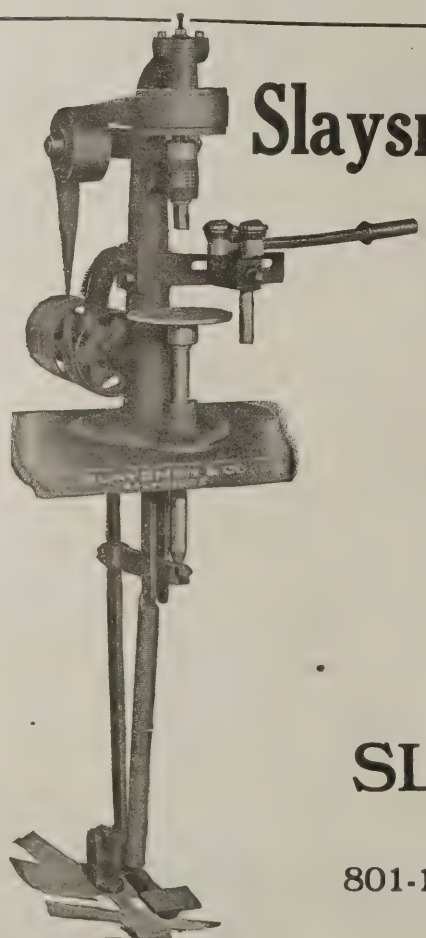
A HANDY MACHINE TO HAVE.

ABOUT this season of the year experiments are going on all over the country, trying new formulae or ways of canning various fruits and vegetables, changing the style of packing for one reason or another, or changing sizes of cans, and seeking, as a wise canner should, to test out the new package as to fill, process, etc. It is the careful canner who goes to this trouble, the one who wants to be sure of his goods. The one drawback to these experiments is the convenience with which they can be done. To start up the whole line just to run a few cans is troublesome, expensive and not always satisfactory as to results. There are a number of machines made for just this purpose. Slaysman & Co., Baltimore, are advertising their No .0 Double Seamer, which might very aptly be called a sample seamer, as it is always ready, will handle any size of can with but a moment's attention, and does perfect work. This gets rid of the annoyance of getting up steam to run the big seamers. Another help would be the installation of a small process kettle, such as is made by the Zastrow Machine Company, Baltimore. The preparation and filling may be done by hand, and with the seamer and the process kettle the experimenting is made easy, but at the same time certain.

"Alec" Slaysman is deservedly well known among a wide circle of canners, and especially can makers, as he has been supplying can-making machinery for years. Recently he underwent a severe sick spell, but is himself again and back in harness. All of these friends may not know what an excellent plant Slaysman & Co. have at their service. It covers half a block on Pratt street, Baltimore, is equipped with the latest and best machinery and represents an invstment running well up into the six figures. And Mr. A. E. Slaysman, still a comparatively young man, is the one who built up this big business.



One of the new machines, and more than ordinarily useful, which Slaysman & Co. have recently brought out is their Duplex Trimmer and Slitter, used in making cans. You know they used to slit the sheets of tin on one machine, and then had to trim them to the exact size on another. This was slow and required much handling. Slaysman combined the two operations, trimming the sheets on one side of the machine, and dropping them onto the other to be slitted to exact size, discharging the finished sheets with but one handling, and of course with vastly increased speed. Naturally, this machine "took" with the can makers. It means something to have an experienced house studying out ways to improve your business, and that is what a house like Slaysman & Co. is always doing.

A THING OF GUILE

Ole—"Ay ban buy this ice cream freezer here. You feller say she ban make ice cream. Ay can't get one dam' thing from her."

Salesman—"Well, did you put cream and flavoring in the can, and ice and salt around it?"

Ole—"No, tanks. All Ay do ban turn old crank like hell. Ah ban know there was catch in it somewhere."

Slaysman's No. 0 Double Seamer

This Double Seamer will do the same class of work as the more costly machines.

Especially adapted for double seaming tops on filled cans.

Weight, 150 lbs.

Will receive cans up to 7½ inches diameter by 8 inches high.

Diameter of tight and loose pulleys, 6 x 3 inches.

Speed, tight and loose pulleys, 600 r. p. m.

HOURS OF LABOR FOR FEMALES IN MARYLAND.

Acts 1916, Chapter 147.

Section 14. No female shall be employed or permitted to work in any manufacturing, mechanical, mercantile, printing, baking or laundering establishment more than ten hours in any one day, nor more than sixty hours in any one week, nor more than eight hours in any one day, if any part of her work is done before 6 o'clock in the morning or after 10 o'clock in the evening of the said day, nor shall any female be employed or permitted to work for more than six hours continuously at any one time in any of the aforesaid establishments in which three or more such persons are employed, without an interval of at least a half hour, except that such female may be so employed for not more than six and a half hours continuously at one time, if she shall not be permitted to work during the remainder of the day in her said employment. Provided, further, that the invalidity of any portion of this Act shall in no way affect the validity of any other portion thereof, which can be given effect, without such invalid part. But the provisions of this section shall not apply to females employed in the canning or preserving, or preparing for canning or preserving of perishable fruit and vegetables. And provided further that in any retail mercantile establishments located outside the city of Baltimore a female may be permitted to work on Saturdays and on Christmas Eve and the five working days next preceding Christmas Eve not more than twelve hours, if during each of such Saturdays and Christmas Eve and five days aforesaid the female so employed shall have at least two rest intervals of not less than one hour each, and this provision shall only apply to such mercantile establishments as have during the remainder of the calendar year a working day of not more than nine hours.

Acts 1912, Chapter 79.

Sec. 15. Every employer shall post in a conspicuous place in every room of any manufacturing, mechanical, mercantile, printing, baking or laundering establishment in which any females are employed a printed notice stating the provisions of this law and the hours of beginning and stopping work. The printed form of such notice shall be furnished by the Chief of the State Board of Labor and Statistics.

Sec. 17. The (said) Inspector and her said assistants, in the discharge of their duties, may enter any place, building or room of any establishment mentioned in Section 14 of this Article and shall visit and inspect all establishments named in said Section 14 as often as practicable during reasonable hours, and shall cause the provisions of this act to be enforced therein; they shall report any cases of illegal employment or other violations of Sections 14 and 15 of this Article to the State's Attorney and the Grand Jury of the county or city where the said offenses shall have been committed.*

Sec. 18. Any person violating any of the provisions of Section 14 and Section 15 of this Article or interfering with, molesting or obstructing the said Inspector or either of his assistants in the discharge of her duties, shall be deemed guilty of a misdemeanor, and upon conviction shall be punished for the first offense by a fine of not more than $100, for a second or any subsequent offense by a fine of not more than $1,000, or by imprisonment for not more than one year, or by both penalties in the discretion of the court.*

*See Chapter 406, Acts 1916, Section 12, which confers all powers and duties of inspectors of female labor upon the State Board of Labor and Statistics.

Children—The Maryland Child Labor Law may be summed up so fa ras the canners are concerned in this one paragraph (Section 5):

> "No child under 14 years of age shall be employed, permitted or suffered to work in, about or in connection with any canning or packing establishment."

In general we believe that other states have about the same laws, and the above will, therefore, serve as a guide for the canners of all states.—The Editor.

OHIO CANNERS WELCOME EVERYBODY TO CINCINNATI.

July 22, 1924.

Mr. Frank Gorrell, Secretary, Washington, D. C.:

Dear Mr. Gorrell—As the representative of the canning industry of Ohio, I wish to express the appreciation of the canners of Ohio for the very great honor of having the National Canners Association Convention and the Convention of the two great allied industries to meet in Ohio next January.

The Presidents of the three Associations have made a wise selection in choosing Cincinnati, the "Queen City of the West," as the next convention city.

Cincinnati is a great convention city, with fine railroad facilities, ample hotel accommodations and a great hall for exhibition purposes. The scenic beauties are unsurpassed any place in the land. The many institutions of the city will be of very great interest to all who attend this convention, especially the ladies. No one should fail to visit the world-famous Rockwood Pottery, the Art Museum, Music Hall, as well as other very interesting places.

Ohio is one of the great canning states of the Union, and the canning industry of this state feels a very great honor in having the convention held in Ohio.

The Ohio Canners Association stands ready to render any service possible, and hopes you will not hesitate to call upon us at any time to make this meeting a great success. Yours very truly,

ARTHUR HAMILTON,
President Ohio Canners Association.

CANNED MILK TRADE.

Extract from Consul Report No. 132664b—Annual Report, Part III, Trade in Leading Articles of Commerce, Local Industries, Shipping, Finance. Prepared by Consul General Wm. H. Gale, Stationed at Hong Kong, May 12, 1924.

SALES of avaporated and condensed milk in the South China market supplied through Hongkong decreased slightly during 1923. Imports amounted to approximately $239,793. The United States continued to do the bulk of the business, followed by Norway and Australia.

Prices remained fairly steady during the year. There are large stocks on hand. It is expected that sales will increase gradually but progressively in proportion as the purchasing power of the native community increases, and as it became educated to the use of this commodity. See report entitled "The Canned Milk Trade of Hongkong," dated April 10, 1924, for fuller discussion.

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

Why The Monitor Blancher?

BECAUSE:

It does not injure the most tender stock.

It will safely give a 30 minute blanch, proving non-injurious.

It gives uniform heat from start to finish.

It discharges used water at feed end, taking in fresh at discharge end, consequently stock is constantly entering clean water.

It discharges stock through clean condensed steam.

It will not choke.

It will not mix.

No other Blancher will stand up to these specifications.

The Markets

BALTIMORE, AUGUST 4, 1924

WEEKLY REVIEW

Crop Conditions Are Improving—Real Crop Weather—Corn and Tomato Crop Ratio Remains at 60—The Pea Pack Is a Good One—Market Taking Peas as Fast as Supplied — No Canning of Early Tomatoes So Far and Not Likely to Be—Stringless Beans on the Tables—Some Changes in the Market Prices.

BRIGHTENING—July closes with a decided better record for its treatment of canners' crops than any of the preceding months of this eventful year. The last three weeks of that month, in this immediate section, were mainly dry, or, at least, devoid of the torrental rains which the preceding months had given, and there was plenty of heat. And with this change has come a change of thought and feeling on the part of all interested in this industry. Formerly when one "met up" with a group of canners or growers, he was regailed with sad stories of deluges, crops washed out, inability to get the fields planted, owing to the almost every-day rains and so forth. Now, when you meet this same clique the story has shifted, and we hear that the terrific heat is burning up everything; that the tomato plants are wilting in the fields, the corn tassels being blistered and the polen killed by the heat; but just as this chorus was getting into full swing there came a tempering of the heat, and now the wailers are lost for something to say. What we have personally seen of crops in a rather wide area the past few weeks have been very helpful—real canners' crop weather and progress can be recorded. The crops needed the heat and the slight amount of moisture, and Dame Nature, as usual, was not wanting in attention. The ratio of prospective yields in corn and tomatoes has not changed, and is still resting at about 60 per cent of normal. The reason for this low figure is well known to all of you, and the one uncertain quantity in the problem is the effect the weather will have on this. We can but record this week that the weather effect has been favorable in most instances and generally speaking.

PEAS—Just what the weather can do to crops and yields is well illustrated in the rumors that are floating about regarding pea crop and pack. From sources that are the best and entirely reliable come reports that the pea pack is behaving itself better than was expected, and will be anything but a disappointment to the canners. That is so far as total pack is concerned. There would seem to be some "kick" about the quality and about the amounts of the chiefly desired fine grades. But, on the other hand, the average quality would seem to be very good. Frank Stare recently summarized Wisconsin's quality condition in these words: "The quality is 'just tolerable'—very few honest-to-God fancies—not so many standards, and practically no sub-standards. You are entitled to two guesses as to what the quality of this pack really is." In our New York market report you will see that there is some complaint about the quality, that it does not seem to match the expectations of some buyers; but that the market needs the goods so badly that it is eating them up as fast as received. After all, a good average quality may be better than an extreme either way. The people are always satisfied with good average quality, and it is certainly an occasion for congratulations that there are practically no sub-standards. It just means that even if there is a big pack of peas, there is a bigger market waiting for them, and the pack will have been taken and passed on before anyone is able to count the result. After the futures have been delivered, if there are any peas left they will be wanted, indeed, and that is the important consideration.

If the corn canners and the tomato canners can be induced to follow the example of the pea packers in producing "practically no sub-standards" when the season for canning these two staples is drawing to its close, we will be able to say of those two articles—be the packs what they may—just what we have said about peas. You can't pack too many of these staples of canned foods, of a good average quality, for the market wants them and will take them. Don't be afraid of the market prices unless you are afraid of your quality.

TOMATOES—The tomato fields still look ragged, but the growers have had an opportunity to work them better, and they are making the most of their opportunity. Some few of the first ripe tomatoes have begun to trickle through to the fresh market, but not many. And "roasting ears" from nearby farms are beginning to show themselves. It is just the beginning, and the crops of both are yet quite a ways off. A last word from Indiana says that the tomato acreage of that State has not showed the desired improvement and that it is going to take a very late frost for Indiana to have anything like a crop. The same report says that the condition of corn seems to grow more serious every day; that most canners are entirely withdrawn from the market, and will not think of adding to their future orders. The crop reports in this issue bear out these advices, and they should be studied carefully.

Usually at this time of the year the Baltimore canners are able to run on the early Jersey tomatoes, which are brought here from Philadelphia and by boat from New Jersey, but not a thing has been done in that direction so far this season. Philadelphia is quarantined on tomatoes, owing to the Japanese beetle, and no tomatoes are likely to come out of that heavy re-shipping point for the earliest tomatoes. But back of it all is that the crop is not ready, and it begins to look like the fresh markets will take all the early tomatoes which the growers can force through, and that under any condition the canners will not have a chance at them. The canners here are busy upon stringless beans, but they are paying such high prices for the green beans that it is said the canners cannot come out even on them. The market was bare of stringless beans, and it is taking them as fast as they are offered. No. 2 green beans are quoted at 90c and the stringless at $1.10.

It used to be the fashion, also, that Baltimore ran heavily on fine peaches at this season; but in recent years they have gone mostly to pie peaches, and now they are not even making an effort to can those.

Talking today with one of the leading oyster packers of the city, he told me that he was going to open a house in New Jersey, where they plant Chesapeake Bay seedlings and ship as high as 142 carloads of fine oysters a day. He said that a tonguer could catch as many oysters there in three hours as a tonguer in the Chesapeake Bay can now catch in three days. As with peaches, so with oysters, and with the early tomatoes cut out the Baltimore canner finds his lot a hard one.

MARKET CHANGES—No. 1 sieve peas, in Baltimore, have been advanced from $1.75 to $2.00, and No. 3 sieve from $1.20 to $1.25 and $1.30, with No. 4 sieve quoted at $1.20. And there has been a very good demand for the so-called Southern packed peas. The No. 5 sieve is marked out of quotation.

Standard crushed corn has been advanced to $1.10, and the demand is good, with the shortage of all spot corn growing more pronounced every day. There is very little spot corn now left in first hands. And not many canners will entertain offers for future corn.

In tomatoes we are obliged to mark down our prices on No. 3 standards this week, and $1.35 replaces the former $1.40. This is merely a nominal reduction, as many will not entertain it when orders are offered, and why it should be made is a market puzzle. But the spot No. 3 tomato market has been a puzzle for a long while. In answer to the remark made by the old-time canner and trader in tomatoes, quoted in these columns recently, to the effect that the No. 3 can of tomatoes is no longer wanted, an equally old and experienced buyer and operator replied that the public does want the No. 3 can of tomatoes, and prefers it to any other size, but that it will not buy it above a certain price. When it passes that price then the demand slips off to the No. 2½, or to the No. 2, and we believe he is right. There is not too much in a No. 3 can of tomatoes, if it is well filled, for the average family use, for, thank God, the average family still has a child or two. The flat-dwellers and the ultra-modern family with a pet poodle instead of a couple or more children may find the No. 2 can of tomatoes ample, but that is not the trade which keeps the canneries busy. The tomato is the working man's meat, it used to be said, and certainly it is most largely consumed by the working men—if you know what we mean—and most of these have many mouths to feed. The No. 3 can of tomatoes is not gone, and will not go, and the No. 2 will never replace it.

NEW YORK MARKET

Market Unchanged—Fruits Advancing—Buying Some Tomatoes —Both Spot Corn and Tomatoes Must Come From South —New Packed Stringless Beans Are Here—New Wisconsin Peas Are Coming In—Southern Peas Sought—Pro-rata Deliveries on Northwestern Fruits.

New York, July 31, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

MARKET UNCHANGED—There have been no important developments in the local market for the past week. Buyers have been concerned mainly with developments at primary points. Chief among these was a further advance on spot fruits by California packers, and the continued strong market for peas, corn and tomatoes. Buying of tunafish eased up somewhat as a result of the unsettled price basis.

Tomatoes—Tomatoes for prompt shipment from Southern canneries were showing increased firmness. Southern canners are now getting a good demand not only from the local and nearby trade, but from mid-Western markets as well. The market is more or less nominal as to price, some holders with only light stocks asking slightly higher than the general market. Prices were within the following ranges, however: Standard 1s, 60 to 62½c; 2s, $1.12½ to $1.15. Standard 3s, $1.35 to $1.40. Standard 10s, $4.25. All prices per dozen, f. o. b. cannery. New pack, for shipment between August 15 to 20, were offering at $1.05 per dozen, f. o. b. Baltimore, for No. 2 standards. Buyers are showing some interest in offerings of new pack extra standards, which are quoted, f. o. b. cannery, at 62½c for 1s, 95 to 97½c for 2s, $1.45 for 3s, $1.40 for 2½s, and $4.50 for 10s.

Corn—Southern markets are chief suppliers of standard corn for immediate shipment, and the market continues to show a strong tone. Standard is quoted at $1.10 to $1.15 per dozen, f. o. b. cannery. Buyers are going more slowly in booking new pack corn, and are underbidding the market to sound out the situation. Canners, however, appear inclined to hold firm, quoting 1s at 80 to 85c; 2s at 95c, and 10s at $6.00 per dozen for standard crushed, with the usual differentials for shoepeg, Country Gentleman, and the extra standard grades.

Stringless Beans—New pack Maryland stringless beans have been under a good demand, and the market is somewhat stronger. No. 2 cut green stringless range $1.05 to $1.10 per dozen, with 10s at $5.25 per dozen. No. 2 standard whole green string beans are held at $1.00 per dozen, and 10s at $4.25 per dozen. Packs of string and stringless beans will be late in other sections of the country, and distributors are turning to the South for supplies to carry them until they start receiving shipments on future contracts from other sections.

Wolf! Wolf!—Wholesale grocers are wondering whether or not the numerous reports of "drought damage," "brown rust" and other routine reports of crop damage in California, as affecting the possible canned fruit pack, are borne out by actual conditions, or are in line with the old fable. The recent advances in fruit prices have given buyers pause for thought, and it is believed that buying of new pack has not been as heavy as some reports would have it. One of the largest buyers here, discussing the situation with The Canning Trade's representative, expressed the conviction that the California fruit pack this year will be more than adequate for all of the trade's demands, and indicated that local buyers are not inclined to place absolute credence in some of the reports which they are hearing on the new season's progress.

Fruit Salad Up—The California Packing Corporation has advanced its prices on fruit salad 25 cents a dozen on 1s and 2s, 40 cents a dozen on 2½s, and 75 cents on 10s. The new prices, f. o. b. California cannery, for Del Monte brand, are: 1s, $2.47½; 2s, $3.05; 2½, $4.20; 10s, $14.40.

New Wisconsin Peas—New pack Wisconsin peas are arriving, and going into consumption immediately. The quality this year is rather irregular, but current arrivals in many instances are of much better quality than earlier shipments showed. The pack this year is lighter than usual in color. Despite the irregular quality, however, rejections have not been frequent. Had the carryover this year been of normal size, however, it would have meant hard work for the arbitrators. The larger siftings are not in plentiful supply, and the re-sale market is tending upward for the small stocks still available.

Southern Peas—There has been an increased demand for Southern packs, particularly on the larger sizes, jobbers turning to Delaware, Maryland and Virginia peas to fill the shortages. Ohio peas are coming in for a good deal of attention here, and the Michigan pack is also in demand. Southern canners are quoting the market steady to strong on peas, and are inclined to hold firm at listed quotations, anticipating a demand during the remainder of the season which will take care of all of the stocks which they have on hand at full quotations.

Fruits Withdrawn—Some of the California fruit packers continue withdrawn on new pack fruits, and are talking higher prices when they re-enter the market for further bookings.

Maine Sardines—The market continues based on keyless quarter oils at $3.75. Trading has been rather quiet, with buyers inclined to anticipate a lower market. Weather conditions have been favorable to increased consumption, but jobbers have continued to operate hand to mouth.

Tuna Easy—Reports of weakening tunafish prices made in these columns last week have been verified by transactions here. As one commentator puts it: "Irregularities in tuna prices, born of a bumper catch, continue to disturb the trade which contracted early." "Disturbed," however, is rather misleading in this instance; some of the unlucky buyers are downright "sore."

More Salmon Sales—There has been an increased demand for salmon on spot, and the market presents a steady to strong tone. The warmer weather has stimulated demand, and stocks which have been held here are moving out rather well. Consignment holdings of both reds and pinks are reported to be very low.

Northwestern Fruits—Reports received by buyers here indicate that pro-rata deliveries on berries, particularly fancy quality, may be looked for this year. Packers have booked a good business, but the pack is running very much below earlier expectations. It is reported that the pack of strawberries will not be over 50 per cent of the anticipated yield.

Crabmeat—New pack crabmeat is on the market, and is meeting with a good demand. Jobbers quote the spot market as follows: Fancy 1s, $26.50; halves, $28.50; extra fancy 1s, $28.00; halves, $30.00, all prices per case, ex-warehouse, New York.

Trade Notes—Allan Bacon, of Bacon & Trubenbach, is visiting among Wisconsin pea packers this week.

W. H. Killian, of W. H. Killian & Co., is visiting some of his principals among the Wisconsin pea canners.

ST. LOUIS MARKET

The Market Situation—Early Pea Contracts Predicted as Good Investment—California Pears in Heavy Demand—European Buyers Want Apricots—Prices on Canned Foods.

St. Louis, July 31, 1924.

By "Missourian,"
Special Correspondent "The Canning Trade."

THE SITUATION—There is little change in the canned foods situation. There is a light demand, and when placed the orders are for small quantities. Operators who specialize in certain packs refuse to make any comment on the situation.

Jobbing operations are so restricted that there is little to be said of spot stocks. Goods are going to the retailers and the retailers are passing them to the consumer. Distributors are making every effort to keep from getting more than they need and what they buy they pick up where it can be had for the least amount of money. There is very little factory buying.

Tomatoes—Most of the canners in the South are out of the market. Those who are not are accepting a limited volume of business. Late planting will affect the pack date. While there is no push to place orders at prices quoted, contracts made are considered good.

Peas—No changes in pea conditions are reported. The whole line is firm, with prospects of advancing. Frequent predictions are made that early-made contracts will prove a good investment. Wisconsin reports continue to predict shortages in both sweets and Alaskas. Buyers are holding out in spite of this prediction.

Corn—Sport corn is quiet, with the trade mostly in standards, the only available line, as fancy has been pretty well cleaned up.

Fruits—California fruits are being held firmly because crop conditions and the heavy demand for fresh fruits in the Eastern markets will in some measure curtail canning. Packers are showing an inclination to advance standard peaches. The pear market is getting more stiffer because of the sale of last year's carryover and the heavy demand for fresh stock. Canners are pulling out their offerings because of the light receipts from growers. European buyers are centering most of their attention on apricots, and the result is a stiffening in the raw market, and has made it difficult to obtain full requirements at prices which are believed to be in line.

The first six months of the year compared with the corresponding period last year have been spotty in the wholesale grocery line in St. Louis, according to C. H. Schlapp, of Kranning-Schlapp Grocery Co. The trade has experienced an untoward condition in the canning industry, brought about by the unseasonable weather. Mr. Schlapp looks forward, however, to favorable business during the remainder of the year.

MAINE MARKET

Pea Season Closing—Stringless Beans About Ready—Blueberries Coming In—Corn Crop Looking Well—Rain Is Needed —Sardine Canners Waiting for Fish.

Portland, Me., August 1, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

PEAS—The second season of pea canning in Maine is drawing to a close, after a satisfactory pack. The dry weather of the past few weeks has curtailed the crop somewhat, but has not affected the quality, which is, indeed, excellent. Three Maine factories have been engaged this year on peas, with sufficient success to warrant a further growth of the industry in the State. The output as yet is so small that New England has readily absorbed the goods and will doubtless consume all that may be produced here for some time to come.

Beans—Stringless beans are about ready for the factory, and will doubtless be well under way in all parts of the State before the 10th. This crop has withstood adverse weather conditions, and now looks very promising. Just at present rains are badly needed, but it is hoped that local showers will furnish the necessary moisture.

Blueberries—Blueberries are also due at about this time, although the opening may be a few days late this year. The crop is going to be rather light, according to reports from the eastern section, where practically all berries are canned. Prices are usually put out by this time, but today no canner wants to name his selling price until his raw fruit and labor costs can be determined more carefully. The increase in demand for hand-picked berries for basket trade, to be shipped to city markets, is having an influence on factory supply and costs.

Corn—Corn for the most part is looking very well, indeed, except in some sections, where no showers have relieved the drought. The growth today is up to normal for this season, and conditions are promising. There are several large pieces of corn growing this year, 30 acres or more in a plot, and these are all looking very well. For many years it has been difficult to get more than from two to five acres planted by any grower, and this has led the canners into farming operations on a large scale for Maine. The Burnham & Morrill Co. has a 30-acre piece of corn growing at Farmington, the H. L. Forhan Co. has an equally large acreage at Hiram, and there are several others of comparative size in various parts of the State.

The sardine canneries are still handicapped by lack of fish, even though July and August are usually the best months in the business. The market demand is very good and canners are very anxious to get as large packs as possible. A sharp advance in price is expected within a few days, caused by the advance of raw materials, oil, etc., and the very high labor costs attendant on small volume.

Dr. Morgan, chief chemist of the Continental Can Co., has spent the past week in Maine, and has now returned to his office.

CHICAGO MARKET

Wisconsin Offering Peas—Retailers Need Peas—Only Certain Thing Is That Spot Canned Foods Are Sold Out and Gone —Buying Michigan Fruits—Corn Is In Good Inquiry—Hot Weather Prevailing.

Chicago, July 31, 1924.

By "Wrangler,"
Special Correspondent "The Canning Trade."

PEAS—Wisconsin is offering some standard 4s Alaska and some standard 5s sweet peas at from $1.15 to $1.20, f. o. b. canneries, and wholesalers are buying them about as fast as they are offered. The buying is not of a speculative character, as the stock is needed to supply the demand from the retail grocers.

The retailers have bought futures very sparingly, so it is said, and have permitted their storerooms to become depleted of canned peas, as well as of other canned foods, and must now replenish or quit business in canned foods.

This has been one of the most indefinite seasons in canned foods ever experienced in the Central West. There have been all kinds of reports and information in relation to the crop prospects and canning outputs, and so much disagreement in the multiplicity of reports that the buying ahead has been confused, and buyers seem to be confining their purposes to actual immediate needs.

They know and fully realize that no matter how large the output for 1924 may be, that it will be needed, and will all go speedily into consumption.

There has been heavy buying during the week in Michigan No. 10 fruits, blackberries, black raspberries and red sour pitted cherries, and some contracts, so the brokers state, have even been made for No. 10 apples.

The cherry crop in Northern Michigan is about four weeks late, so it is stated on good authority, and deliveries will be about that late. The output of red sour pitted cherries for 1924 in Michigan is selling up rapidly, and canners are now generally asking $8.50 per dozen, f. o. b. canneries in that State, for standard fill stock.

There is a good inquiry for canned corn for delivery from the new crop, and brokers report the placing of some good-sized contracts this week.

Very hot weather is now prevailing all throughout the lake region and the Ohio and Mississippi valleys, and as it is interspersed with frequent light rains, as it used to be said by the farmers, one can stand still and quiet and "hear the crops grow."

The people are eating all kinds of fresh fruits and vegetables now, and prices which have been high are declining. Canteloupes, watermelons, peaches, also California cherries, apricots, plums and Michigan berries are in great abundance, and fresh vegetables from nearby districts are coming into the city markets. A good 40-pound watermelon, which until recently brought a dollar, can now be bought for 50 cents, and under the circumstances canned foods are being somewhat neglected.

What Canned Foods Distributors are Doing

Attorney General Stone Announces Opposition to Modofication or Nullification of Consent Decree.—Impossible for Jobbers to Effect Further Economies, Says McLaurin.—News and Notes of The Trade.

THE CONSENT DECREE—Wholesale grocers, who have been much concerned over the possible attitude of the new Attorney General toward the packers' consent decree case, were cheered last week when Attorney General Stone, in a formal statement, indicated that vigorous resistance will be offered to any attempt by the big meat packers to set aside the consent decree requiring the packers to give up their business in groceries and other "unrelated" lines.

Attorney General Stone, in his statement, said: "Several newspaper articles brought to my attention indicate that the Farmers' National Council has recently given out a statement that the Attorney General has refused to give any assurance that he will exercise his legal authority to prevent monopoly and protect the public and that the Attorney General informs the council that his predecessor, Daugherty, promised immunity from publicity to the interests which tried to knock out the packers' consent decree, and that the Attorney General had declined to take any position with respect to efforts of the packers to have the packers' consent decree set aside.

"The Farmers' National Council apparently has been misinformed, as such statements are without foundation in fact. The Attorney General, several weeks ago, gave instruction that any efforts to modify or set aside the consent decree taken against the packers during the Wilson administration should be vigorously resisted. The Attorney General has given every assurance that he will exercise his legal authority to prevent monopoly and attempts to monopolize by resort to appropriate legal proceedings wherever there is evidence justifying such proceedings. The Attorney General has not informed the Farmers' National Council, or any one else, that Mr. Daugherty promised immunity from publicity to anyone seeking to modify or set aside the packers' consent decree, and he has no knowledge or information to the effect that any such promise was made."

This definite and clear-cut statement on the part of Mr. Stone has heartened the grocery jobbing trade in its fight against the possible return of the "Big Five" into the wholesale grocery business.

MORE ECONOMY OR MORE GROSS PROFIT?—Under this intriguing heading J. H. McLaurin, president of the American Wholesale Grocers' Association, places before the trade several interesting thoughts and suggestions regarding current trade problems. "We have advocated for a long time the policy that wholesale grocers should study their business," says Mr. McLaurin. "We still believe that great advantage can be gained by them from a more complete knowledge and understanding of the economics of the wholesale grocery trade. It is of much value to them to have comprehensive studies made of the cost of doing business year by year and the average results obtained from business. This Association has from time to time undertaken such work, and the Harvard Bureau of Business Research has likewise studied for the past eight years the operating expenses of the wholesale grocery business. It is not to detract one iota from the value of such excellent work, nor indeed to question the accuracy of the figures presented in any of the studies, that we feel called upon to dissent from certain conclusions that have been announced by the Director of the Harvard Bureau of Business Research. We believe that the whosesale grocers of the country will agree with us that this conclusion is not justified by the facts. Our desire is to examine with you this conclusion that has been widely published and to seek your aid in correcting the error in it, insofar as there is an error. In a recent address by the Director of the Harvard Bureau of Business Research, occurs the following statement:

" 'Although complaints are made from time to time regarding the margin of gross profit that wholesalers receive, I am convinced that the solution of the problems that confront the trade does not in any way lie in the direction of wider margins, but rather in the introduction of economies. Economy is the only

effective means by which the wholesale grocers can hope for long to meet the competition of chain store companies and co-operative buying associations.'

"In Bulletin No. 40 issued by this same Bureau, on 'Operating Expenses in the Wholesale Grocery Business in 1923,' occurs the following statement:

" 'The tendency noted toward lower gross margins in 1923 reflects the competitive situation and presumably indicates that under present-day conditions wholesale grocers must depend for a favorable net profit showing primarily on the achievement of economies in operating expenses rather than on extensions of gross margins.'

"It is these conclusions," continues Mr. McLaurin, "which we wish to examine with you. We have often proclaimed as a fundamental principle that the wholesale grocer should continue to exist just so long and only so long as he can offer the most economical method of distributing food products. We still hold to this principle. But if the above statements are correct, it seems to us that the wholesale grocery business is doomed, for you know as a practical fact that you cannot reduce your margin of gross profit and continue to live. This becomes, then, a serious matter and worthy of most careful consideration.

"It is obvious that the existence of a margin between gross profits and operating expenses is a matter of life-and-death importance to the wholesaler. We do not for a moment believe that a sufficient margin of net profit can be secured by any possible economies, even though the wholesale grocery business reached the perfection of efficiency, to enable the business to become prosperous. The demonstration of this statement we shall show in succeeding bulletins. In this one we desire to emphasize two points.

"The first of these points is that conditions have been such in the wholesale food trade for the past few years as to compel the wholesale grocer to search in every nook and corner for ways of achieving economy in operation. The double pressure of increased expenses and falling prices forced the wholesaler to turn his eyes inward, as it were, and scrutinize every item of expenditure. With all of his faults, the wholesaler is not grossly inefficient. It is pointed out in the same address from which the above quotation is taken that among the six trades from which figures on operating expenses are secured, the average cost of doing business 'is substantially lower in the wholesale grocery trade than in any of the other wholesale trades from which figures are available.

"The second point is that behind the figures quoted in this survey lies the actual practice among wholesale grocers. Legitimate margins of gross profit have not in fact been taken or kept by them. It makes no difference what margin may be allowed by a manufacturer if it is thereafter given away. If some wholesalers persist in senseless price cutting to increase the volume of business and by this price cutting destroy all chance for a net profit to themselves and their fellow-wholesalers, there is no saving in expense or any other means of solution for them. The wholesale grocer has no right to more than a fair margin of profit, but he has a right to that for a service honestly and efficiently performed. And, then, there is that matter of discounts. Of course, the wholesale grocer should always take the discounts offered him. In this matter, as we have so often said, ten days does not mean fifteen or twenty days. He should take his legitimate discount honestly and he should keep it. That discount is his and he should not pass it on to the retailer. It is our purpose in this bulletin first to call your careful attention to the statement. If it is true, we must, of course, face the conditions, however disastrous they may be. But if it is erroneous or only a half-truth, as we believe that it is, the statement must not be permitted to go unchallenged.

"We herewith challenge it. At the same time we wish to call attention once more again to those practices among wholesale grocers which tend to undermine the very industry and to render all margins only paper margins. Price cutting is cut-throat competition. It must cease. So likewise with trafficking in discounts. It must cease. In future bulletins we shall deal with other phases of this subject, including an examination of the statistics. In the meanwhile we shall be glad to hear from the wholesale grocers in regard to it. Does it bring conviction to your mind? Are you willing to let it go unchallenged?"

Harry E. Sloan Dead—Wholesale grocers all over the country were shocked last week to learn of the death of Harry E. Sloan, secretary of the Missouri-Arkansas Wholesale Grocers' Association, who died suddenly at Kansas City on July 15. Mr. Sloan had been ill for the past month, although it was not considered that he was at all dangerously sick. The end came with a sudden heart attack. The funeral was held on July 17th. Mr. Sloan, or "Harry," as he was widely and affectionately known to the trade, was very well known throughout the country. He was born in Peoria in 1860, and started his wholesale grocery career with local firms. He went West and was associated for a time with Frank C. Letts in the Western Grocer Co., later taking up the work of Secretary for the Missouri-Kansas Wholesale Grocers' Association. He was regarded by many as the most forceful writer on wholesale grocery subjects in the country. He was a prominent figure in all conventions, where his host of friends will miss him.

Return From West—Alfred H. Beckmann, secretary of the National Chain Store Grocers' Association, has returned from a trip through the Middle West, Pacific Coast and Northwestern territories. Chain store grocery business is in a flourishing condition in the territories he visited, he reported. The territory just visited by Mr. Beckmann, it will be recalled, was just recently a battleground between wholesale grocers and manufacturers, when the former resented the practice of "selling direct" which the manufacturers were extending to the Pacific Coast. Until rcently most of the Western chain stores were forced to buy most of their supplies from wholesale grocers.

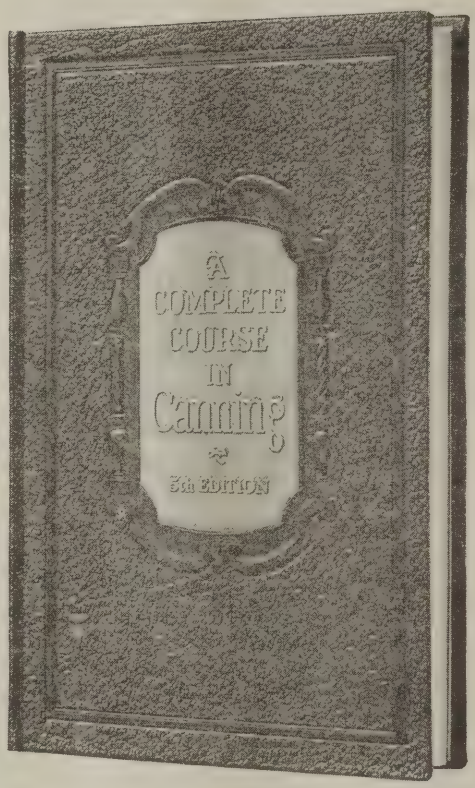
Returns From Europe—Arthur P. Williams, president of R. C. Williams & Co., Inc., of New York City, has just returned from a visit to Farnce, Austria and Switzerland. Commenting on business conditions in the countries which he visited, Mr. Williams said: "My trip convinced me that if the Dawes plan is acted upon favorably, the present trouble of the various governments will be ended, exchange will be stabilized, and all of Europe wil become prosperous. There seems to be enough favorabe sentiment to put the Dawes plan over, and I am convinced that it is absolutely necessary. If it is not adopted, Europe will face absolute ruin."

CANADA SHIPS CANNED CLAMS.

A SHIPMENT of 410 cases of Canadian clams was the most noticeable feature of May shipments from Prince Rupert. It is possible that this shipment may inaugurate considerable trade, reports from the American Consul in advices received by the Department of Commerce. The clams were canned on the Queen Charlotte Islands, and quite an extensive plant has been constructed with a view to marketing a considerable portion of its products in the United States. The clams are said to be of excellent quality, are obtainable in large quantities, and are minced and cooked before packing.

LINK-BELT PUTS OUT NEW GREASE CUP.

A grease cup is a small matter in a plant or factory, but it can be a nuisance and a cause of expense far out of proportion to the cost of the cup. Recognizing this, the ink-Belt Company of Indianapolis has developed a new top for their regular compression grease cup. This top is hexagonal in shape, which provides not only a good grip for the hand, but one for a wrench. Cold, stiff grease makes a compression cup very hard to turn, and a pipe wrench is not always accessible. The hexagonal shape provides grip spaces for the ordinary wrench.



Also, this cup is provided with a raised slot so that the cup can be turned with a screw driver, when it is so located that it is inconvenient for the hand or wrench.

Ruggedly made of malleable iron, the new cup, known as the Hex-top grease cup, is absolutely grease tight.

SMILE AWHILE

A RANK BEGINNER

I leaned to her lips and kissed her;
She was a lass sweet and fair;
Somehow she seemed disappointed,
And I caught her sigh of despair.
I asked: "May I meet you next Tuesday?"
She cooed: "Tuesday's out of it quite;
So you'd better come around Friday;
Because that is amateur night." —E. D. K.

YEARS LATE

The author who had striven for years had at last achieved success, but he was as gloomy as ever.

"Why, man, you're famous!" cried a friend. "What's wrong with you?"

"Darn it!" exlopded the celebrated one, "I wanted to be an infant prodigy!"

CONSIDERATE

Cy—"What d'ye think of the city?"

Hy—"Wa-all, better not say. There's a heap o' folks livin' there, an' I don't want to hurt their feelin's."

FULLY EXPLAINED

Mrs. Kriss—"Is your son still a member of the Army?"

Cook—"Ah ain't sho'. But Ah knows dey am out lookin' fer him, so Ah guess dat he's at least a member-at-large."

ECONOMY

Cop—"Say, what was your reason for attempting suicide, anyway?"

Bedraggled Scot—"There was a leak in the gas I couldna stop, an' I didna want to see it go to waste, mon."

LOST OPPORTUNITY

Fair Young Thing—"Do you really think, bishop, that times today are as bad as in Rome before the decline?"

Bishop—"Almost, without doubt, but not quite."

F. Y. T.—"Oh, why didn't I specialize in Roman history in school?"

CANDID

(Ad in Denver Post)

IF THE bird who borrowed my overcoat from the sedan on Stout street Tuesday night to keep someone from swiping it will return same to me, I'll slip him thirty bucks and ask no questions. Baker, Savoy Hotel. P. S.—You can't hock it for that.

THE PEST

"What was the shooting last night?" asked the stranger in Holster, Arizona.

"Oh, the boys got rid of a liquor nuisance," replied Black Powder Pete.

"Bootlegger, eh?"

"Naw. Nosey sheriff."

THE GOOD OLD DAYS

Hey—"Has your town any historical traditions?"

Dey—"Oh, yes. Up to two or three years ago we never had a drunk in the place."

FAMOUS P. S.'s.

EDITORIALS

THE REASON WHY OF QUALITY—The whole canned foods industry has been so lectured and urged and begged to pack "quality" that everyone should know his duty by this time, and the subject is becoming somewhat shopworn. Of course, the advice goes off many backs like water off the duck's, and this is true of both canner and buyer, and usually the broker is willing to buy or sell anything that he is told to do. The degree of the quality, therefore, becomes a personal matter, just as success or failure in business is wholly a personal matter. The man who can see the value of building a reputation and a name, commonly called "good-will," will be mighty careful of his quality, and it can be depended upon that his quality will be real and not imaginary. To that man the continual demand for quality packing becomes tiresome, because to pack quality seems to him to be the only sensible thing to do, and he will do nothing else and not permit any buyer or broker to swerve him from his path. Unfortunately, quality is susceptible of comparison, and there are degrees of quality, and not all men understand what is meant by quality. When quality is spoken of as we do here, we mean a thoroughly satisfactory article of canned food—satisfactory to the general public and not to the canner alone. And that is where a lot of the canners fall down. They think their quality is all that could be desired, whereas, in fact, it is anything but desirable. It is this phase of the question that has brought us back to this age-old subject with us. And it came about in this way:

In the consideration of the coming Canned Foods Week—November 8-15—one of our good Western friends asked us if we did not think it would be well to establish a lecture bureau, for the purpose of giving lectures all through the year upon canned foods. We answered that we thought the proposed efforts of Canned Foods Week, and which are to be elaborate and very complete, are all sufficient for the present. The public can be surfeited with canned foods talk; can be given too much of even a good thing, and should be carefully guided away from any idea of a propaganda on canned foods, because the public is sick of propagandas. It is better, in our opinion, to confine the effort to one big week, handled by one committee of the whole, it may be, but having the appearance of one set occasion, in which everyone interested in canned foods is cooperating. The linking together of all the canners, with all the various branches of the industry handling canned foods, presents to the public a united effort and wins their confidence because of this unanimity. This will lead the consumers gently, but surely, to an increased use of canned foods, and we will get a permanent growth instead of a sudden inflation which cannot be permanent.

And it is right here that quality comes in. If the people are told to eat canned foods, and urged to just simply buy them, they will take any canned foods, and many of the new users will be sadly disappointed in some of their chance purchases, we all know, and these will become enemies of canned foods and workers against them. This danger could be obviated this season, owing to the well-cleaned-up condition of all spot stocks—if the canners would be careful of their quality. It is the greatest opportunity this industry has ever had, and that is why we want to stress it and to call it to the attention of every canner in the business. And every supply man and every broker—every man coming in contact with canners—should make it his personal business to help make the opportunity known, and then see that it is lived up to. The big show of Canned Foods Week will come right at the end of the packing season, and if there is a big lot of miserable quality canned foods put out, there will be more harm done by Canned Foods Week than good. Through Canned Foods Week canned foods step out onto the center of the stage, right into the spot light, and if they cannot stand this scrutiny, they would do better to stay off the stage. That's how important quality is this year. The world is willing to look at canned foods, to taste and to try them, and it is not over-fussy about quality, but does want to feel that it has been given full value for its money. If the labels were so plainly and clearly worded that the public could make no mistake about the quality of the goods it is buying, the quality question could be left to the individual, because he would sink or swim,

according to the style in which he answers his customers; but the canners will not so label their goods, and as an industry they seem to be dead set against giving their consumers the information they owe them on the labels.

AND NOW FOR SOMETHING LIGHTER—The automobile is just about as important a factor in the canning industry as seeds or most any other supply, as practically every canner is an owner and driver of one or more. For that reason the following, taken from The Peptomist, a little house organ published by the Fleet-McGinley Co., of Baltimore, will be read with much interest. The need is apparent to every automobilist, and we would like to see this doctrine spread and put into universal effect, wouldn't you?

A PLEA

Accidents, fatal and otherwise, due to the automobile mount in number with a staggering rapidity.

Of course, much of this is due to the great increase in the number of motor vehicles on the streets. But there is another factor which observation and many experiences compel me to think is important.

There is no ordinary courtesy between and among motorists on the road. Or none to speak of. To be sure, the motorist often is called on to be a friend in need to a brother motorist in trouble. But let him once be mounted on his four good wheels and going strong—and the fight is on again.

Motorists vie with each other for the possession of the coveted strip of road that puts one first around the corner, or hog the center so the man behind can't pass, or rush ahead so that "I won't need to take that fellow's dust."

If two pedestrians accidentally bump into each other on the street, one does not immediately bawl at the other, "Why in the hell don't you learn how to walk?" Such an encounter leads to no profanity, no overheating of the system, no sarcastic remarks—unless, of course, one or the other is a boor.

Put the two men in motors and let something similar happen, and they behave like boors.

One gentleman does not squeeze past another on the street without a murmur of apology. The boor who wants to brush by on the road squawks a raucous horn, and howls his aggrieved anguish if one doesn't at once give him all he wants.

Two gentlemen whose paths are about to intersect at a crossing, each pauses, and politely waves the other to go first. But what happens in a motor? The gentleman now turned boor by the necromancy of grasping the steering-wheel sees the other approach and speeds up to beat him to it.

But the ways of the boor in the motorcar are far; far too numerous to catalog. And there is not one of us who hasn't some bit of boorishness on his conscience. It isn't just the increased traffic that is rolling up the death column. It's the reversion to jungle type; the going back to the behavior of our very remote ancestors, whose slogan was, "Grab while the grabbing is good."

Is there any good reason why a gentleman should become a boor when he seizes a steering-wheel? Is there any good reason why the same courtesy should not prevail among motorists as among pedestrians? If so, what is it? If a man steps on another accidentally in a ballroom, he apologizes; if he does it in a motorcar, he sues for failure to give right of way. Why?

Boorishness, the boorishness of uncivilized savages—this is what makes motoring anything but a pleasure; this it is which strews our highways with the maimed and dead.

Courtesy—and safety first!

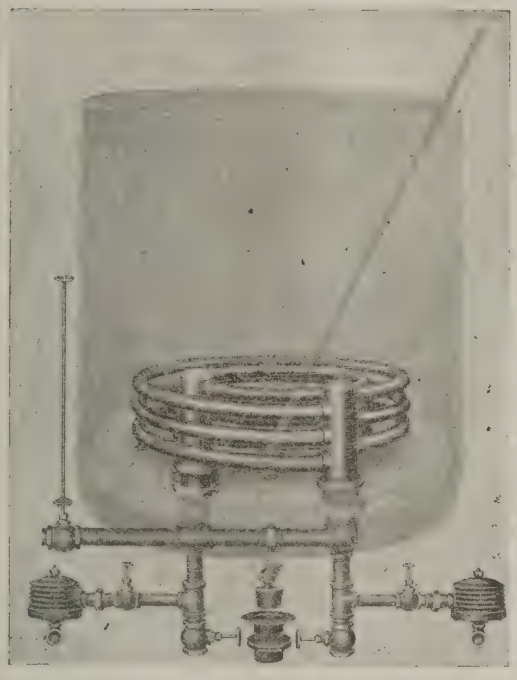
NEW ELEVATOR OWNERS' ASSOCIATION HAS BEEN FORMED IN MICHIGAN

From the Bean-Bag and Pea Journal

The newly organized Elevator Owners' Association has opened offices at 550 Sapital National Bank Building, Lansing, Mich., and is now on an operating basis.

The organization is composed of approximately 50 member elevators, with expectations that this number will reach 100 by fall. Members are located principally in what is known as the Central District of Michigan, and the officers are: President, N. T. Davern, Carson City; vice-president, M. W. Muscott, Breckenridge; secretary-treasurer and general manager, W. R. Kehoe. Mr. Kehoe is well known throughout the State, and for many years was with J. P. Burroughs & Son, Flint.

Mr. Kehoe talks most interestingly of the association, its purposes and plans. The organization was made necessary, he says, because of steady change that has taken place in the distribution and handling of beans. Small elevators, widely scattered, have been at a disadvantage in marketing their product. The jobbers, many of whom operate lines of elevators, picking plants, selling organizations, have been able to market a uniform grade of beans, and earn a larger profit thereby. But the installation of terminal plants, fully equipped, and adequate selling organizations, has been beyond the means of the small operator, or even small groups of operators, so the new association was first talked of, then meetings were held, and organization perfected.



The members meant business. They were determined to operate efficiently and at a profit. Through a period of weeks, discussions and conferences were held, and an arrangement perfected whereby Chatterton & Son, already one of the largest bean jobbers in the world, becomes sole selling agent for the association, which, it is expected, will market between 3,500 and 4,000 cars of beans per year.

Among the things which all elevator members agree to, and which will tend to stabilize and protect the bean market, is the absolute prohibition of direct quotations to the trade. At the Central Office in Lansing reports will be received from all members, showing amount of beans bought and sold, the movement throughout the State, and all information of interest to members will be bulletined to them at short intervals.

While Chatterton & Son have made no definite statement, it is rumored that several plans of marketing beans, quite revolutionary in the industry, will be undertaken—plans that will work well with the general movement to place Michigan beans on a higher standing throughout the world than they have been occupying of late.

THE KOOK-MORE KOILS

A unit that has set a new standard for the time in which tomato pulp should be cooked. Nothing short of the Kook-More can double your tank's capacity, speed up your batches and preserve color and flavor. The Kook-MoreKoil will do the trick.

Above can be furnished with Glass Lined or Cypress Wood Tanks, in complete Units.

The Corn Worm

By Mr. J. W. McColloch

Kansas State Agricultural College, Manhattan Kansas

Note—The above address delivered by Mr. McColloch sometime ago will be found very timely right now as the corn crop is coming on. You must be prepared to combat any attack, and you will find this helpful.

IT was with some hesitancy that the speaker accepted the kind invitation to address this association on the corn earworm. While much of my work during the past ten years has been devoted to a study of this insect, the work has been largely with field corn. Sweet corn is a minor crop in Kansas, being grown principally in home gardens and by truck gardeners. In no case is the area devoted to the crop large. It might be said, however, that very little attention has been given to the earworm as a pest of sweet corn even in the regions where sweet corn is a crop of much importance. While most of the studies at the Kansas station have been on field corn, yet throughout the period of the investigation observations and experiments have been conducted on sweet corn.

It might also be stated that many of the results obtained on field corn apply equally well to the sweet varieties.

In the present discussion the speaker will first take up the importance of the earworm,

Then its life history, methods of control,

And, finally, outline some of the problems that are now under way or should be taken up in the future.

Importance—The corn earworm ranks among the most injurious insects of the United States. It is estimated that it destroys at least 2 per cent of the corn crop produced annually. In Kansas the loss averages about 5 per cent. From 15 to 20 per cent of the sweet corn is injured each year. Sweet corn seems to be the preferred food of the earworm. It is not exceptional for the larvae to bore directly down the ear, in which case the actual number of grains destroyed is considerable. In addition, the filthy excrement distributed over so large a space favors decay and subsequent moulding, thus making the corn unfit for table or market. In the Southern States the earworm has become such a pest that the growing of sweet corn has been abandoned in many sections.

The earworm is also a serious pest of cotton and throughout the cotton growing regions is known as the cotton bollworm. It is conservatively estimated that 4 per cent of the crop is destroyed.

Tobacco suffers an annual loss of approximately 2 per cent, due to the earworm activities.

In addition, considerable damage occurs to such crops as tomatoes, alfalfa, beans and peas of all kinds, and sorghums.

Its known food plants number one hundred different species of plants representing many widely separated forms. A conservative estimate placed the total loss to all crops in 1910 at $65,000,000 to $70,000,000.

In addition to the direct injury which it causes to corn, it is also responsible for much of the damage to molds and fungi.

In entering the ears the larvae leave an entrance for spores of various kinds, and the excrement of the larvae provides an excellent media for growth. The feeding of very wormy and moldy corn to horses has produced well-marked symptoms of bling staggers.

Thus we have an insect that not only destroys our crops, but is also a detriment to our livestock.

Description of Stages—Before taking up the life history, brief mention should be made of the various stages in the development.

The corn earworm in the course of its development passes through four different and distinct stages—adult, egg, larva and pupa. These stages differ so greatly that one might not suspect any relationship between them. The adult is a moth or miller about one and one-third inches across the spread wings. It varies in color from brown or olive green to pale yellow. The moths are night fliers and are seldom seen during the day, being hidden in the curl of the plants or under some suitable cover. Flight usually takes place during the evening when they are white or yellowish in color, spherical in shape and covered with minute ridges running from top to bottom. They are about one-fiftieth of an inch in diameter. In the case of corn, they are usually found on the silks, on the upper surface of the leaves or on the stalks. The larvae in general resemble the common cutworms and army worms to which they are closely related. On hatching they are very small and are to be found feeding in the vicinity where the eggs were deposited. The larger worms show a great variation in color. So much so that a popular description cannot be given. Any variation from pale green to black may be found. When full grown the larvae are about one and one-half inches long. The pupa is the resting stage in which the transformation from the larvae to the adult takes place. They resemble the pupae of the vast series of cutworms and army worms, from which they are difficult to separate. They are oval in shape. Mahogany brown in color, about three-quarters of an inch in length. They are always found in pupal cells at depths ranging from 2 inches to 6 inches below the surface of the ground.

Life History—A knowledge of the history of any insect usually forms the basis for its control. The life history varies in different localities, being influenced by many factors as temperature, rainfall, soil conditions, plants, etc. In the case of the earworm, for example, we find the number of broods varying from one or two in Canada to six or seven in Southern Texas. In the present discussion the life history will be taken up as it occurs under Kansas conditions. In many ways this will approximate the conditions of certain of the sweet corn districts. The winter is passed in the pupal or resting stage in spherical cells at a depth of from 2 to 6 inches below the surface of the ground.

A few words in regard to this pupal cell are appropriate here, since one of the control measures is based on this point. The larvae in leaving the corn plant in

McSTAY MACHINE CO., Manufacturers
510 Consolidated Building, Los Angeles

the fall entered the soil and burrowed downward for several inches. It then excavated a tunnel upward toward the surface, leaving a thin layer of top soil untouched. The larva then returned to the bottom of the burrow and transformed to the pupa. The adults from these overwintering pupae will emerge about the first of June.

The eggs of this brood are laid principally on the upper and lower surfaces of the leaves. Should any early sweet corn be in silk, many eggs will be deposited on it. It might be mentioned at this time that the moths show a decided preference for the different parts of the corn plant in ovipositing. It is a generally recognized fact that the adult of any insect deposits its eggs on substances best suited for the nourishment of the larvae, and the corn earworm is no exception. In every case the silks are selected in preference to any other part of the plant. When these are not available, then the eggs are placed on the upper surface of the leaves and the stalks. Relatively few eggs are laid on the lower surface of the leaves, the husks or the tassels. A female may deposit 2,000 or more eggs. These are usually laid singly and only one or two on a plant. This is another worthy attempt on the part of the adult for the perpetuation of the species. The egg stage is of short duration, occupying three to four days. The larva on hatching feeds for a short period in the vicinity where the egg was deposited. It then seeks a protected place for feeding either in the curl or the ear. The larvae become full grown about the last of June, leave the plant and enter the soul for pupation, as has been described. The pupal stage is from seven to ten days. The second brood of adults begin emerging about July 7. The life cycle is repeated.

Since more plants are in silk, more eggs are deposited there and more larvae attack the ears. This brood completes its growth about the first of August.

The third brood of adults begin emerging about August 10 to 15. Here we have a repetition of the life cycle.

It is the pupae of this brood that pass the winter. In Kansas we have three full broods of the earworm annually. The first brood of adults appear early in June, the second brood about July 10, and the third brood about August 10. The maximum emergence occurs about two weeks after the first emergence. The first two broods are of little importance in comparison with the third brood. This is especially true with regard to field corn. This brings us to a discussion of the measures of control.

The corn earworm has long been recognized as one of the most difficult insect pests to control. It must be admitted at the outset that a satisfactory remedy for it on corn is yet to be discovered. Numerous measures have been advocated. Many are entirely impractical.

Trap lights, hand picking, pinching ears. Some might be feasible under certain conditions.

Rotation, poison baits.—A few are practical, at least, in reducing the injury. There are a number of factors which make the control so difficult.

1st. World-wide distribution, since the earworm is generally distributed throughout the world from the Arctic to the Antarctic Circle.

2nd. Great number and diversity of food plants renders control difficult.

The larvae are known to feed on about one hundred different species of plants. These plants are scattered through many families and generations, and represent plants of great diversity of form, habit of growth, structure, etc.

Many of our injurious insects confine themselves to a single food plant or to a group of closely related plants.

3rd. Ability to fly long distances enters into control. Migration is an important factor in the life economy of any insect. It enables the species to mitigate the adverse conditions that may exist in a locality. It enables the insect to infest larger areas.

4th. Great egg-laying capacity and method of oviposition are important, since a single female is capable of deposition two thousand or more eggs, and these are usually laid singly and only one or two on a plant. This secures a wide distribution in the field and is a protection against crowding, exhaustion of food supply and extermination.

There are from 8,000 to 10,000 plants to an acre of field corn, and four or five females could readily infest all of these. And

5th. Feeding habits of the larvae must be taken into consideration. The larvae are primarily internal feeders. On corn they are usually found deep in the curl or inside the ear. Here they are protected from their predaceous and parasitic enemies, and here it is impossible to reach them with poisonous materials. Larvae that feed in the open are generally heavily parasitized. In fact, the larvae are always abundant in the fall in alfalfa fields, but parasitism is so high that few if any reach the pupal stage.

It seems to be the consensus of poinion among investigators that a complete control can never be accomplished. The problem is one of reducing the injury to a minimum. The speaker has been engaged during the past ten years in a study of the corn earworm under Kansas conditions. The first two years were devoted almost entirely to a study of the life economy in the field. Since then much of the investigational work has been along the lines of control.

A study of the life history and seasonal history reveals several outstanding facts which can be made use of in control work.

1. The winter is spent as a pupa in the soil, and they also spend some time between generations in the ground. This enables one to destroy large numbers by plowing and cultivating at the proper time.

2. The larvae feed for a short time on the external parts of the plants. At such times they may be destroyed with poisonous sprays.

3. There is a marked increase in the infestation with each generation. This opens the way for the application of methods which hasten maturity and for the growing of early maturing varieties. At the present time much of the investigational work revolves on these points, and these will be discussed more in detail.

Fall Plowing—This is one of the earliest methods advocated. It is based on the manner in which the insect hibernates. As has been mentioned, the winter is passed as a pupa at from 2 to 6 inches below the surface of the soil. Before pupating the larva constructs a U-shaped tube, one arm of which is open almost to the surface of the ground. This is a provision of the successful emergence of the adult. Pupation takes place in a cell at the base of this tube.

The object of fall plowing is to break up this pupal sell and destroys the emergence tube. The pupa is exposed to the extreme climatic conditions of winter, and is crushed by the freezing and thawing of the soil. Re-

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

A Public Service

The services of the canner are being appreciated by the American people today, more than ever, and with increased efficiency the day is not far distant when these services will be in even greater demand.

More and more, canneries are realizing that efficiency depends in no insignificant degree upon the careful handling of their sensitive food products, and are appreciating that progressive advantages in sanitation are to be derived from that sweet, wholesome, sanitary cleanliness produced through the use of

Wyandotte Sanitary Cleaner and Cleanser

Indian in circle

in every package

The unusual nature of this cleaner, its efficiency in producing a sanitarily clean surface, its easy rinsing qualities, and its economy, all contribute toward making Wyandotte Sanitary Cleaner and Cleanser most suitable and desirable for the canner's cleaning problems. A trial of this distinctive cleaner will quickly convince you of your need for Wyandotte cleanlinees.

Order from your supply house.
It Cleans Clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan.

peated experiments have shown that fall plowing always results in the destruction of 95 to 100 per cent of the over-wintering pupae.

Cultivation—The same principle is involved here as in fall plowing. It requires a knowledge of the time of pupation of the different broods during the summer. In Kansas the first brood pupates the last week of June, and the second brood the last of July and the first of August. Thorough cultivation at these times will destroy large numbers of the pupa. Is not as effective as fall plowing because many are protected by roots and they are not exposed to the extreme climatic conditions.

Time of Planting as a Control Measure—This is based on several points in the life economy.

1. That there is a more or less definite emergence period for each brood.
2. That the adults in ovipositing show a decided preference for corn silks and for plants that are in silk.
3. That most of the larvae entering the ears come from eggs deposited on the silks, and
4. That there is a large increase in the number of individauls with each succeeding brood.

The problem is one of bringing the plants into silk between broods, thus forcing the eggs to be laid on other parts of the plant. The date of planting is not a new idea, but it is one that has not been developed as generally as it should be. It is a recognized fact that there is a seasonal periodicity exhibited by many of our injurious insects and their host plants. There are periods of time which under favorable conditions offer the best opportunities for the insects to perpetuate their kind. Likewise there are periods when crops can be planted to produce the maximum yields.

In a date of planting experiment there are many factors which must be taken into consideration.

1. That of locality.

Since the life history of the corn earworm will vary to some extent with each locality.

There will also be a difference in the growth of the plants.

2. The variety of corn must also be considered.

Each variety has a different growing period and the date of silking and maturing is different. In order to be conclusive, a date of planting experiment must extend over a period of years in order to obtain average conditions.

Experiments on the date of planting field corn have been in progress at Manhattan, Kansas, during the past ten years. This investigation has consisted of a series of five or six plots of corn planted at intervals of two weeks, beginning April 15. Four standard varieties, namely, Boone county white, commercial white, Kansas sunflower and Hildreth, have been grown in each plot.

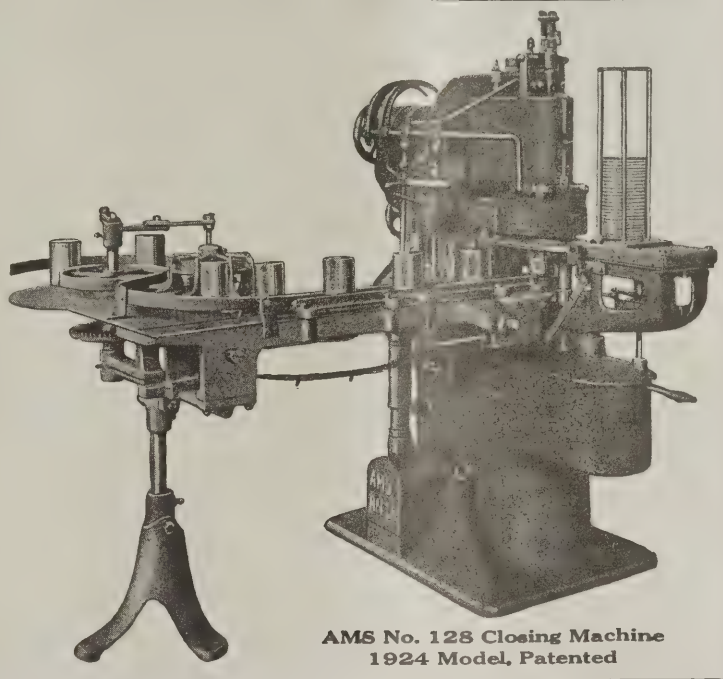
MAX AMS Closing Machines

Made by the Pioneer Builders of Sanitary Can Making Machinery and used All Over the World.

Where one head is better than two, two heads may be better than one for some things—but not for Closing Machines.

In Closing Machines with separate heads for each operation, where the can must pass from one chuck to another, it is very difficult to center the can on the second chuck. All too often it is not centered and a cut or split top seam is the result.



AMS CLOSING MACHINES have only one seaming head. The can is completley double seamed without moving from the original chuck. The seaming rollers (one for each operation) are set in the wonderful AMS SPLIT SEAMING RING (patented) which has just the right amount of spring to offset the extra thicknesses of tin at the side seams. Therefore, there can be no cutting of the side seam nor cutting or splitting of the top seams on an AMS CLOSING MACHINE.

Insure tight seams for your pack this season by using AMS CLOSING MACHINES.

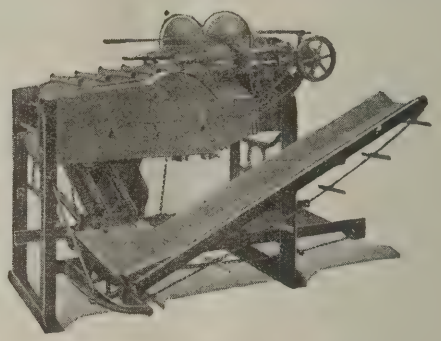
ROBINS ROTARY TOMATO WASHER.

FUSARIUM WILT OF TOMATO AND ITS CONTROL BY MEANS OF RESISTANT VARIETIES

By J. W. LESLEY

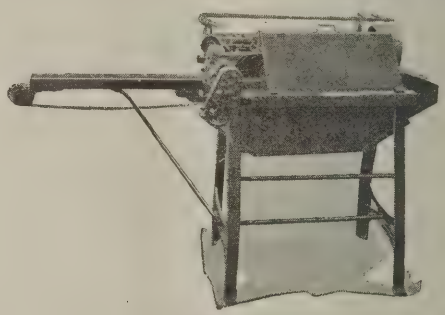
University of California, College of Agriculture,
Agricultural Experiment Station.



WILT is among the most serious diseases of the tomato in California, often inflicting considerable loss both on the shipping and on the canning crop. It is exceptional to find a field entirely free from wilt, and cases frequently occur where from 5 to 10 per cent, and occasionally as much as 85 per cent, of the crop is lost. The disease varies considerably in severity in different seasons. For instance, in the Santa Clara Valley it was more severe in 1922 than in 1923. As a rule, wilt is more important than Western blight in regions near the coast, such as Orange county and the San Fernando and Santa Clara valleys.

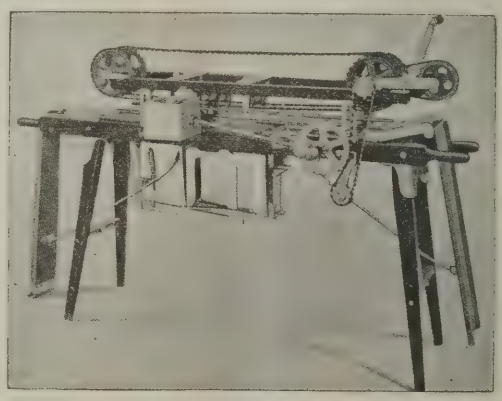
The cause of wilt is a fungus (Fusarium Lycopersici Sacc.) which inhabits the soil and invades the young roots of the tomato plants. The plants may become infected either in the seedbed or in the field after transplanting. The wilt fungus is rather widely scattered in the tomato growing sections of the State. Once present in any part of a field, it tends to spread, especially if the land is cropped to tomatoes at short intervals or, still worse, without rotation.

Very often wilt is referred to as "blight," in spite of the fact that the two diseases are quite distinct and are easily distinguished even when the same plant is attacked by both. In view of this confusion, a description of the characteristic symptoms of wilt is included here.



Fusarium Wilt Symptoms in California—Once the wilt fungus has gained entrance into the roots of the tomato plant, it grows up through the woody part of the vascular bundles into the stem, sometimes for a considerable distance. Corresponding to the growth of the fungus from below upwards, a yellow discoloration of the lowest leaves occurs, usually giving the first indication of the disease. As the disease develops, the lower leaves turn brown and the upper leaves often appear unusually dark green, while the leaflets become curled downward and shrunken. If the progress of the disease is very rapid, some wilting of young leaves occurs, as the name of the disease indicates, but the wilted condition is by no means always present. In this stage the affected plants appear as if suffering from lack of water. A good indication of wilt is the browning of the woody tissues of the stems and roots, best seen by cutting or splitting the main stem near the ground. The discoloration usually does not extend into the pith or central part of the stem until the final decay sets in.

It is common with this disease to find that, while some of the stems of the tomato plant are diseased, the remainder appear quite healthy. One side of a stem may even show browning of the wood, while the other side appears healthy and free from discoloration. Diseased plants often put out new and healthy shoots; these, however, in turn, may become infected. In the final stage of a serious case of wilt the plant turns brown, dries up, and dies. Those affected plants which continue to live through the season produce some fruit. The yield, however, is much reduced and the fruit undersized, although the seeds usually mature. If seedlings become infected while in the seedbed, they may perish early; or, if transplanted to the field, are likely to die without producing any crop.



Patented
THE MORRAL CORN HUSKER
either
Single or Double

The fastest and best husker on the market. It has an automatic ear placer that places the ear at the proper place and careless feeders will not waste corn and it will save a great deal of corn over any other husker.

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

Preventive Measures—Since the infection occurs, as a rule, either in the seedbed or in the field, the greatest care should be taken to select land which is free from the wilt fungus. If the seedlings show any "damping off" or "collar rot," the seedbed should not be used another year. Plants from such a seedbed are likely to develop wilt. Even if no disease is observed, the repeated use of the same seedbed year after year is not a good practice. Infection with wilt in the seedbed (as with some other diseases) usually has far worse consequences than infection in the field. The practice of buying plants should, if possible, be avoided, as such plants are frequently the means of introducing some disease.

It is difficult to be sure that a field for tomatoes is entirely free from disease, and sometimes it is necessary to plant in a field in which some infection is present. Consequently, some means of control must be sought. Once the plants are set out, no control measures avail. Treatment of the soil before planting with fungicides such as formaldehyde is costly and not practicable except on a small area. Rotation of crops is advisable, as it affords some protection against wilt. If, for example, tomatoes are planted once in three years, the wilt disease will probably cause less damage than if tomatoes are planted more frequently. But it should be noted that the fungus is not solely dependent on tomato plants for its maintenance. It may live for one or more years on decayed organic matter in the soil, only to reappear when tomatoes are planted there again. Crops such as watermelons, peppers and potatoes are not likely to be affected by the tomato wilt, although these crops may suffer from wilts caused by closely related fungi.

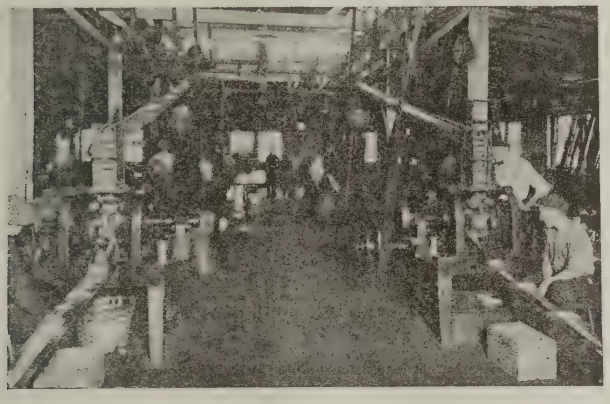
Wilt Resistant Varieties— Tbe best method of control is the use of wilt resistant varieties. This method is being successfully applied in many tomato-growing States in which wilt has caused serious loss. Such varieties are not entirely proof against the disease. On the contrary, they become infected, but are able to produce a satisfactory crop in spite of it.

At the present time the variety most widely grown in Southern California and in the San Joaquin Valley is Stone. This variety is very susceptible to wilt. San Jose Canner, a variety with large, well-shaped fruits (not to be confused with the so-called "Jap Canner") is also very susceptible. The same is true of Earliana, a variety grown to a considerable extent for the local market. Probably these three varieties are used on more than half of the tomato acreage of the State, and none of them is resistant to wilt. They are in many respects well suited to the sections in which they are grown and often produce heavy crops, but being susceptible to wilt, they are not suitable for planting on wilt-infected land. Indeed, such a practice may lead to serious loss as some recent experiments clearly indicate.

During the season of 1923 many tomato varieties reported to be wilt-resistant in other States were tested on plots situated at Riverside, La Mesa in San Diego county, and at Chatsworth in the San Fernando Valley. One variety named Norton, which proved wilt-resistant at all three places, may be recommended for commercial planting in place of the Stone wherever wilt disease has been at all troublesome.

Norton originated as a selection from Stone and closely resembles the parent variety. The principal difference lies in the fact that Stone is very susceptible to wilt, whereas Norton is resistant. In 1923, in a field in San Diego county which was severely infected with wilt, the variety Stone was practically a total failure, but Norton, growing on the same field, gave a satisfactory crop. Even on land free from infection, Norton gives results equal to Stone. For instance, in 1923 a large grower in the San Fernando Valley, who planted some thirty acres of this variety in a field almost free from wilt infection, reports that Norton, although somewhat smaller in size, was at least equal to Stone in production and seemed to have somewhat heavier fruit. If the wilt disease had been prevalent in this field, as was often the case in 1923 in the San Fernando Valley, Norton would have given much the larger crop.

It should be noted that resistance to wilt by no means indicates any resistance to Root Knot (Nematode) or to Western blight. Although Norton is recommended for planting in sections where Stone is now grown, it may not be suitable for other sections, such as the Santa Clara Valley, where the "Jap Canner" variety is now largely grown. It is not yet possible to recommend a wilt-resistant variety fully adapted to the conditions of the Santa Clara Valley or other northern coastal sections, but it is hoped in time to develop from the "Jap Ganner" a more wilt-resistant selection.



Several other promising varieties showed wilt resistance in the recent trials in California. Among them is the well-known Globe variety, which is earlier in maturing than Stone, but later than Earliana. It has pink fruit of exceptionally good shape, but considerably smaller in size than Stone. The foliage is rather scanty, thus making the fruit more subject to sunburn. Being earlier than Stone, wilt resistant, a good shipper, and prolific, Globe may be used to advantage under suitable conditions.

Certain other varieties have also shown indications of resistance to wilt disease, but need further trial of their wilt resistance and other qualities before any of them can be recommended for planting. Some of the most promising may be mentioned here. Marvel appeared to be remarkably wilt resistant and produced a good crop on heavily infested land. It bears scarlet fruit of good shape, but smaller than Stone, although earlier in maturity. Louisiana Red and Louisiana Pink were also wilt resistant. These varieties produced good yields of early maturing fruit, that of Louisiana Pink being larger in size. As with other early varieties, the vines were rather scanty. Norduke also seemed to be very resistant to wilt. This variety matured later and was not equal to Norton in production. It bears scarlet fruit equal to Stone in size, and the vines are exceptionally luxuriant, thus affording ample shade for the fruit.

Summary—Wilt disease of tomatoes, caused by the fungus Fusarium Lycopersici Sacc., inflicts serious losses on tomato fields in California. Soil of the tomato seedbeds should be free from the fungus, as infection in the seedbed is destructive to the young plants, and is often the means of spreading the disease to uninfected fields. If the field is already infected, a rotation of crops is advisable. When an infected field is to be cropped to tomatoes, wilt-resistant varieties should be used.

In sections where Stone is now the standard variety Norton is recommended in preference, as it is resistant to wilt and is a desirable commercial variety. Globe has also shown wilt resistance, and under suitable conditions may be useful where a somewhat earlier variety for shipping is desired.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

155 E. Superior Street,
Chicago, Illinois.

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Rising Sun, Md., August 3, 1924—Corn in this section is in need of rain, and with it would come considerable improvement. However, even then the crop will not be very good, as so much of corn is dirty. This is due to the fact that harvest has interfered and also the rains came just at the time when it should have been worked. Acreage larger than last year, but even this will not give any larger pack. While we believe this section will give 75 per cent, yet many fields are so poor that they will cut down this average severely. However, with more rain things may improve, but we will not have a big crop.

Hopewell, N. J., August 2, 1924—Tomatoes—Acreage a little above normal. Plants were set late, due to heavy rains, and have not been properly attended to, owing to growers being busy harvesting other crops. Prospect is that there will be a light pack unless we have a late fall.

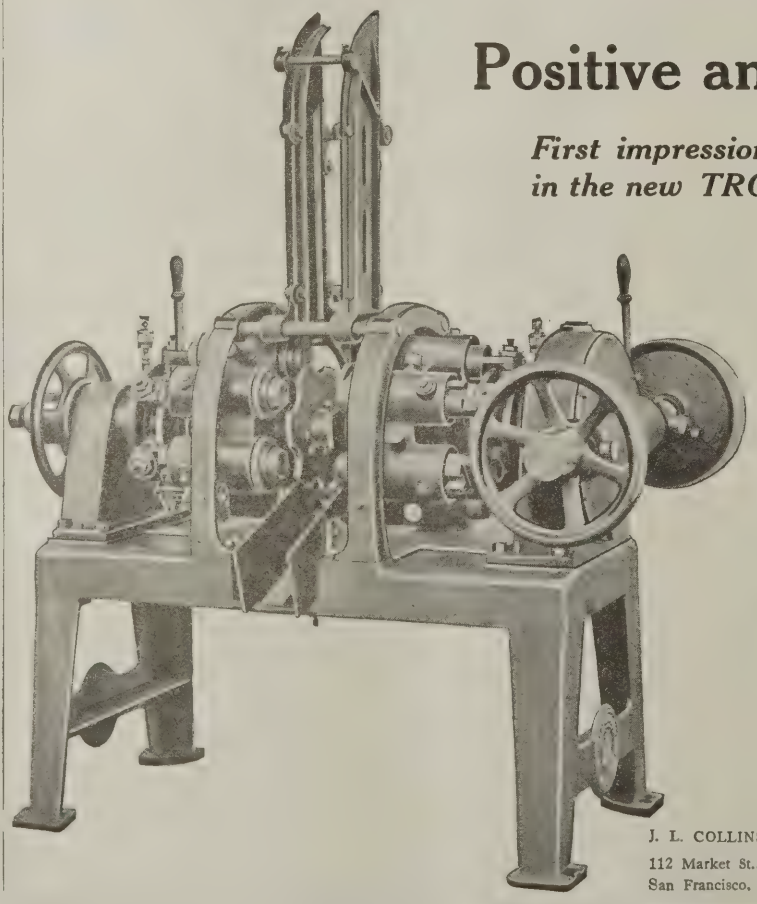
Bridgeton, N. J., August 1, 1924—Tomatoes—The crop is about three weeks late and stand is very poor. Will not be a full pack in this section.

Newport, N. J., August 4, 1924—Peas—Condition was 85 per cent and sold from $2.00 to $4.00 per bushel.

Green Beans—90 per cent. Was no market for this, sold very low.

Tomatoes—Estimated at 60 per cent and two weeks later than last year. We have had dry weather for six weeks. We generally open factory August 10th, but this year there will not be any tomatoes before the 25th of this month.

Fairhaven, N. Y., August 1, 1924—Peas—More in acreage. 25 per cent less this year.



Cherries—Normal crop.

Beans—More in acreage. Fair.

Tomatoes—Same in acreage. Normal.

Circleville, Ohio, August 2, 1924—Corn—Acreage 100 per cent. Two or three weeks late. We planted up to July 5th. Conditions bad. Heavy rains and floods destroyed much of the corn, and the weather has been unfavorable for growing right through the season. Very dry now. Our estimate today is 60 per cent of our early anticipations.

Fayette, Ohio, August 4, 1924—Corn—Looking fine, though about two weeks late and somewhat weedy. With favorable weather and late frost will have 75 per cent of a pack. Weather now very cool for time of year.

Positive and Simple Adjustments

First impressions gained by the can maker interestea in the new TROYER-FOX Six Station Rotary Flanger.

Add to this, long bronzed bushed slide bearings, for the cam actuated 3" diameter Flanging Die Pistons, and you have a smooth, even, drawn out, undamaged flange and a machine that will run for years with little cost for repairs or upkeep.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek Kewaunee, Wisconsin

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

Summitville, Ind., July 30, 1924—Green Beans—The dry weather is hurting the crop.

Corn—The weather is damaging corn to a great extent.

Beets—A great many of the late plantings have not come up yet.

Tomatoes—Looking fairly well considering the weather and the lateness of the season.

None of these crops indicate anything like a full crop.

Spencerville, Ind., August 1, 1924—Tomatoes—Looking good. They are setting good and look like a very good yield. The acreage is much larger in this county than formerly, because of some new canneries. About 100 acres.

Corn—Very poor and not very much planted on account of wet weather.

If we should get an early frost, as predicted, the crops will be very short.

Milford, Ill., July 30, 1924 — Corn — About two weeks late. There will be little or no canning done until September 1st. Indications are for a bunching of the crop. A fair pack may be expected if we have a late fall, but an early frost would be very serious.

Mill Shoals, Ill., July 31, 1924—Tomatoes—While we have twice as many acres as last year, we don't expect to can any more, namely, 4,000 No. 3 cans this year. Late spring, cold weather and then too much rain has cut our tomatoes. We will have to have a favorable season from now on to get half crop of tomatoes.

Cedar Grove, Wis., August 1, 1924—Peas—10 per cent increase in acreage. Crop normal.

Corn—Poor prospects.

Columbus, Wis., August 1, 1924 — Peas — Crop about finished. Acreage about 5 per cent larger than last year. Yield about normal, while last year was about 70 per cent of normal. Quality excellent.

Corn—Very late and backward, but now coming along nicely. It will require a very long fall without frost to make a crop.

Minneapolis, Minn., July 31, 1924—Corn—Acreage is larger than last year, but outlook not very good now. Probably 70 per cent of normal.

Marshfield, Mo., August 1, 1924—Tomatoes—Acreage is about normal, but was set very late, owing to the cold, late, wet spring. The vines are small and not much fruit yet. Patches are very grassy on account of wet weather and lack of cultivation. Will be about 75 per cent of normal.

Lowry, Va., August 5, 1924—Tomatoes—We have about 50 per cent of a prospect for a crop. We will not open factory here before the 20th of August. Crop late and very few tomatoes on vines.

String Beans—Scarce. Our acreage about same as last season. Crop was damaged by black stem rot, but it seems to be all right at present.

Newark, Del., August 5, 1924 — Tomatoes — We have in acreage about 450 which are in fair condition. This weather doing them lots of good. I am expecting about a 60 to 80 per cent pack, due to disease and inclement weather conditions at the time of planting. From the questionnaires that I sent out I find that some have excellent patches, others have plowed their patches up, but most of them report a fair yield. Where they have succeeded in getting a stand, the plants are doing very well, but in the low places they are not so good.

Corn—What is true about tomatoes is also true about corn. We have 350 acres of corn which will average us from two to three tons to the acre, depending on the farmer. As a whole, our corn is very fair. We could stand a little rain on it about now.

THE BROKERS IN CANNED FOODS WEEK

November 8-15, 1924

By Secty Paul Fishback

As President Whiteman wrote you a few days ago, here is the outline of the plan for National Canned Foods Week, November 8th to 15th, inclusive, 1924.

The purpose of Canned Foods Week is to stimulate consumer interest in canned foods, to the end that there may be greater purchases and consumption of all kinds of canned foods. Consumer interest is to be reached as follows:

Advertising—A two-page spread advertisement in the November 8th issue of the Saturday Evening Post (on sale Thursday the 6th) devoted to canned foods and Canned Foods Week. Several of the large national advertisers will devote part or all of their space in the important magazines to the subject. Regular users of newspaper space for canned foods advertising will also co-operate.

Reprints of the special advertising will be distributed among brokers, jobbers, canners, chain stores and newspapers. It is believed that in local markets special advertising will be solicited and carried by the newspapers, following the distribution of the reprint.

The canners will furnish muslin signs of the same size and type as heretofore for use on wholesale and retail delivery trucks. These should be put into use about October 20th.

The canners will also furnish window and store signs of a new design and size in five colors and very handsome. These will be distributed through the local broker and jobber organizations to the retail grocers.

Publicity—Arrangements are being made to supply the daily papers with press stories about canned foods and Canned Foods Week. Special luncheon menus will be provided, and luncheon club meetings devoted to Canned Foods Week will be planned. Wherever possible radio messages of canned foods will be broadcasted.

All of the successful plans which have been used in the past will be repeated, this being left largely to the originality and industry of local committees.

The Brokers' Job—Canned foods brokers are called upon to volunteer their services as members of local committees to co-operate with National Chairman P. J. Murphy in co-ordinating the efforts of the jobbers and retailers in their territories. Chairmen are being appointed by the American and National Wholesale Grocers' Associations, and as rapidly as broker committees are formed, contacts will be arranged, and the organization completed.

Combines advantages of all former silkers

In the Model 7 the good features of all former Silkers have been combined. The rectangular upper screens thoroughly separate pieces of cob from the corn. The square type of drum is a decided advantage over the old round type as the mass is continually being raised, thrown and dropped, preventing the corn from "balling up."

Removes greater percentage of silk

The horizontal wires are spaced so that no corn can pass thru without touching several wires, and they will remove a greater percentage of silk than any other arrangement.

These wires are equipped with a positive semi-automatic cleaning device. A moment's attention periodically keeps the machine clean.

The lower horizontal screens are furnished with smaller perforations when desired, to catch small pieces of cob and husk that may have passed the upper screens. These screens vibrate constantly in opposite directions and complete the job of removing undesirable matter from the corn. All screens are instantly removable. The machine is designed and arranged so that cleaning is a simple matter.

SPRAGUE-SELLS CORPORATION

General Sales Office:

Sprague-Sells Corporation
Successor to
Sprague Canning Mach. Co.
Hoopeston, Ill.

Sales Agents for Pacific Coast: Smith Manufacturing Co., San Jose, Cal.

SPRAGUE-SELLS SILKER

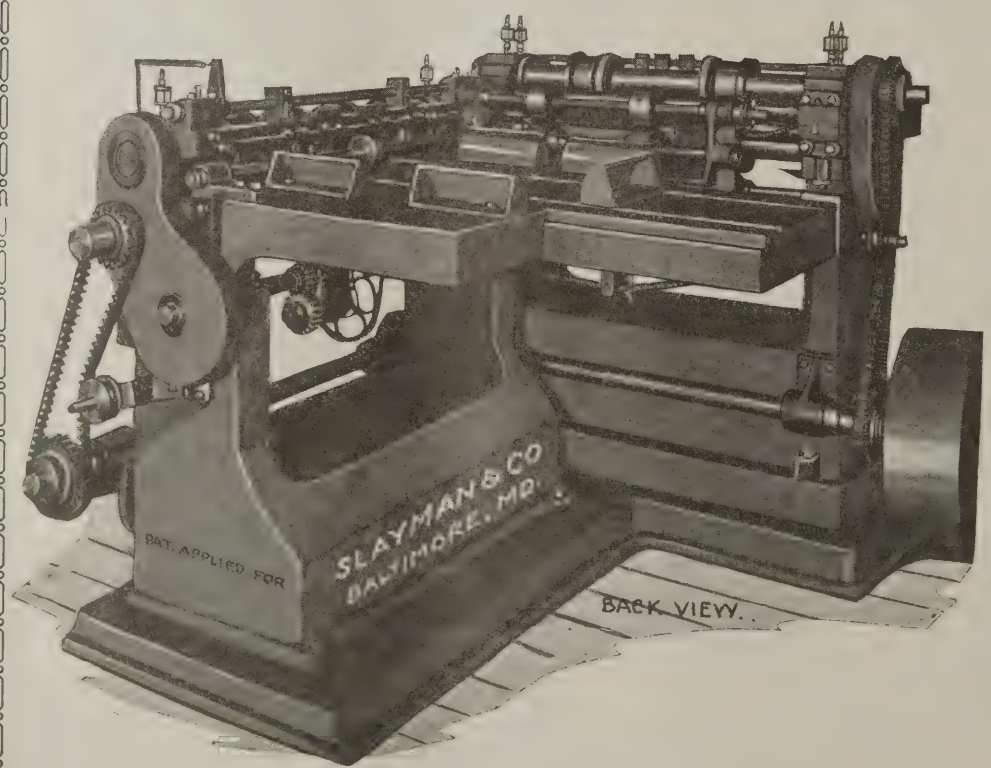
This advertisement is published jointly by the Peerless Husker Company, Inc., Buffalo, N. Y., and the Sprague-Sells Corporation, Hoopeston, Illinois

It will be up to the brokers to see to it that all jobbers in their territory are fully sold on Canned Foods Week, and ready to help make it a success. It is the jobbers' salesmen who will make Canned Foods Week a marked success this fall, and it is up to the brokers to make sure that the jobbers themselves are in complete harmony with the plan, to begin with, and that they impart their enthusiasm to their salesmen. Meetings of the salesmen should be arranged, at which a broker should tell the story.

If the jobber's salesman is for us, he will make sure that every retailer in his territory has a display of canned foods and of Canned Foods Week streamers and cards. And that means success. The salesman can be sold on the plan by calling his attention to the fact that the time is most advantageous. New goods will have been delivered. Consumers will be ready for them. Retailers, loaded with deliveries on their future purchases, will be glad of anything to stimulate consumer purchases, and in the end there will arise a need for additional purchases, which will mean more business for the jobber and his salesman. Of course, the canned foods broker's share comes in replenishing the stock of the jobber, and that is an item for consideration.

Please take this matter seriously, promptly. Get your market lined up as quickly as you can, and then report the names of your local committee, with its chairman, to this office, or to Mr. P. J. Murphy, 326 West Madison street, Chicago, Ill. As quickly as you are organized you will be required to furnish information as to the amount of advertising matter that can be judiciously distributed in your territory, and supplies will be sent to you amply early for complete and effective distribution.

The time is short to complete the work to be done, but ample if you work quickly and effectively. This Association believes that there is at least one canned foods broker in each market where we have members who will volunteer to serve as broker member of the general committee composed of brokers, jobbers and retailers, also canners in those markets where there are canners located or close at hand. In markets where there are no volunteers, there will be appointments, but if you volunteer quickly, your work will be quickly done.



The preliminaries will not require much time. A week or so now will put you in shape for the final drive, beginning about November 1st and running up to the 8th. Thereafter the results will pay you for your time and efforts, to say nothing of the satisfaction which comes from having co-operated with two other great branches of the food distributing industry in work which is helpful to distributers and consumers alike.

INTERESTING FIGURES FROM ALL BEAN STATES

The Michigan Crop Reporting Bureau on July 11 released the following statement:

The preliminary estimates on beans offer some very interesting comparisons and Michigan farmers and dealers will do well to keep these figures in mind during the coming year. While the total acreage planted is 60,000 greater than in 1923, there is an actual decrease of 116,000 acres in the States growing the white pea bean and an increase of 176,000 acres in Colorado and

SLAYSMAN DUPLEX TRIMMER—SLITTER

ZASTROW MACHINE CO., Inc.

Foot of Thames St.,
BALTIMORE, MD.

New Mexico whose crops are principally of the Pinto variety. While it is too early to predict what the volume of the crop will be, the present condition represents an increase in the two Pinto States of 1,190,000 bushels and a decrease of 3,301,000 bushels in the pea bean States, as compared with last year. As two and three-fourths millions of this decrease is in California, the Michigan crop will constitute a larger percentage of the white beans and undoubtedly be of greater influence on the bean market than ever before, according to official statement issued by V. H. Church, U. S. Agricultural Statistician for Michigan, and L. Whitney Watkins, State Commissioner of Agriculture.

The estimates for the important producing States are as follows:

	Acres Planted	Condition Per cent	Production Bushels	Farm Price June 15
New York	131,000	86	1,746,000	$3.80
Michigan	557,000	87	6,057,000	2.66
Wisconsin	10,000	83	104,000	3.80
Colorado	306,000	85	2,237,000	2.70
New Mexico ...	110,000	75	660,000	3.20
Arizona	5,000	85	37,000	4.00
Idaho	65,000	90	819,000	3.50
California	173,000	69	1,969,000	3.70
United States ..	1,357,000	82.9	13,629,000	3.38

—The Bean-Bag and Pea Journal.

ATTACK ON HIGH COST OF SHIPPING

Commerce Department Starts Campaign to Reduce Enormous Losses Due to Poor Packing.

AN attack on the high cost of domestic shipping by way of scientific studies destined to reduce the present enormous losses due to poor packing has been launched by the recently organized Domestic Commerce Division of the Department of Commerce, Director Klein announced today.

The public and all factors of industry as well as transportation agencies should benefit from the investigations which are being undertaken at the request of manufacturers, shippers and carriers, in Klein's opinion. He said the new domestic studies are a direct result of the investigations into export packing carried on by his Bureau some months ago at the suggestion of the House Committee on Merchant Marine and Fisheries.

According to Dr. Klein, losses to railroads alone during 1922 because of improper packing are estimated at $11,800,000. It cost carriers last year $5,000,000 just for repairs to damaged containers. More than 5,000,000,000 containers are used in domestic shipping every year.

With the help of the Forest Products Laboratories, the Interstate Commerce Commission, the Post Office Department, and such organizations as the Chamber of Commerce of the United States, the American Railway Association, the American Society for Testing Materials, the National Association of Box Manufacturers, the Associated Cooperage Industries of the United States, the Wire-Bound Box Association and the American Railway Express, the studies have been inaugurated along two basic lines.

First, the need for stronger and better containers so as to reduce loss and damage in transit, and, second, the need for cutting down the constantly growing costs of distribution in which packing plays an important part. Representatives of the different organizations named are now assisting in drawing up plans with the Department of Commerce. John F. Keeley is the Commerce Department's representative.

1924 BEET SUGAR CROP SHOWS 25% GAIN

From Facts About Sugar.

American farmers have planted 915,000 acres to sugar beets this year, as compared with 733,000 acres in 1923 and 606,000 acres in 1922. This is a gain of nearly 25 per cent over the area devoted to the crop last year, and with favorable growing conditions should result in the production of over 2,000,000,000 pounds of sugar.

Colorado is the leading State in the extent of its sugar beet plantings, having 237,301 acres. Next comes Michigan with 155,176 acres, Utah 96,368 acres, Califronia 92,362 acres, Nebraska 66,372 acres, Idaho 58,522 acres, Ohio 55,513 acres, Wisconsin 34,200 acres, Wyoming 26,306 acres and Iowa 25,200 acres. The remaining 68,000 acres is scattered among a number of States, including Indiana, Illinois, Minnesota, Kansas, Montana, Nevada and New Mexico.

The crop has suffered from dry weather in Southern California, Utah and Idaho and the tonnage in these States probably will not be much higher than last year in spite of the increased acreage. In the Rocky Mountain section and in the Central States the condition of the crop is reported fully up to the average of previous years, and in some localities better than average. In Michigan field conditions are exceptionally good.

While the gross value of the crop probably will be larger than in any one of the past three years, farmers are not likely to obtain as large a revenue per acre from sugar beets as they did in 1923. On account of the prospective increase in the crop, combined with a heavy production of cane sugar in Hawaii, Porto Rico and Cuba, prices are at present nearly three cents a pound lower than a year ago. Refined sugar is quoted wholesale in New York at 6.40 cents a pound as compared with 9.25 cents in July, 1923.

She was applying for a pension.

"And pray, madam," asked the examiner, "why do you think yourself entitled to a pension?"

"My husband and I fought all through the war," was the reply.

THE MEAN THING

Peggy—"Does your husband talk in his sleep?"

Polly—"No, and it's awfully exasperating. He only smiles."

CANNED FOOD PRICES

Prices given represent the **lowest** figure generally quoted for lots of wholesale size, usual terms f. o. b. Baltimore (unless otherwise noted) and subject to the customary discount for cash. ****Many canners get higher prices for their goods; some few may take less for a personal reason, but these prices represent the general market at this date.

Baltimore figures corrected by these Brokers: (‡) Thos. J. Meehan & Co. (†) Jos. Zoller & Co., Inc. (§) A. E. Kidwell & Co. (*) Howard E. Jones & Co. New York prices corrected by our special Correspondent.

The Markets

BALTIMORE, AUGUST 11, 1924

WEEKLY REVIEW

Wisconsin Suffers From Too Much Rain—Maryland Needs Rain—Pea Pack Is Affected—Tomatoes and Corn Have Made Progress Under Better Weather—Tomatoes Are Weak in Baltimore—Corn Canning Will Be Late—Market Is Steady.

THE DELUGE—Just as reports began to seep out from Wisconsin that the 1924 pea pack would be much better than supposed, owing to the unusually good pea weather which that State had experienced recently, there came over the wires news that a deluge had struck the State and done considerable damage. Fears, of course, were felt for the sweet peas yet to be canned, and now it seems that they were badly caught.

Under date of August 7th, the Secretary of the Wisconsin Pea Canners' Association, W. E. Nicholoy, wired us as follows:

> "Wisconsin pea pack seriously curtailed account of recent torrental rains. Excessive rains during the past ten days have slowed up canning operations, but heavy downpours of Sunday and Monday finished the job. One canner compelled to abandon 500 acres sweets; others harvesting with hand scythes account ground too muddy for mowing machines. Checking of loss slow because of damage to telephone and telegraph lines, but satisfied loss will run into hundreds of acres."

You can read the story of pea packing in that wire, and see where the hopes of the canners for a good big pack of the late peas, sweets, have gone a-glimmering. This deluge hit this pea crop at its worst time, just when the canners may not wait for drying fields or better weather; right when the peas were ready for the canners and when delays are fatal.

It has been known that Wisconsin has had rather too much moisture during the past two weeks, and the same may be said of New York State, in parts at least, but as Secretary Nicholoy intimates, the finish came with the cloudburst, or whatever it was, which was reported by the daily papers as having done much damage in Milwaukee. We have heard of no such climax in New York State up to this writing. It was thought that peas had squeezed through with a good crop and pack in this most eventful year of 1924, as the only major crop able to do so; and while there will be a good pack of peas, this happening may change the whole complexion.

OTHER CROPS—Locally it has been as dry as a bone for more than six weeks, and the ground is parched as it has not been since last season's long dry spell. This is not helping any crop, and there are those who predict that in and around Baltimore it will kill the tomato crop. That crop was in a bad way, and has been all season, and this visitation is, accordingly, the more harmful.

However, other sections seem to be profiting by the heat and the occasional rains. The general tenor of our Crop Reports is brighter and more hopeful, and it is even said that some of the lost time is being regained. But all agree that it will take a very late fall to insure anything like a good pack of either corn or tomatoes.

Writing us from the heart of the Peninsula, one who says that he has spent the last four weeks "out in the tomato patches," says:

> "Condition much improved in the last three weeks. Vines are growing fine and are fruiting in fine shape. Needing a shower.
>
> "Yield as to vines looks O. K., but many vines missing. Average set about normal, or a little larger than last year, but so badly broken the average will not be over 75 per cent, if that high. We will, with favorable weather from now on, get 60 to 80 per cent of last year's pack; but if early frost, the pack can't be over 50 per cent."

This about summarizes the feelings of most canners and growers, and that is that under the better weather conditions the tomato crop has improved, and gives promise of better yield on such vines as are out and growing. The trouble is that so many of the vines have been killed off from one cause or another that the crop cannot be a full one, regardless of weather. And it will not be far from correct to say that this is the condition in all great tomato canning regions. If there is an exception, it will probably be found on the wrong side of the ledger. Of course, the weather continues to be the controlling factor in the matter, but only as to yield per plant, for the acreage cannot be added to, needless to say.

For some unaccountable reason the tomato market in Baltimore shows a weakness this week. It is possible that the early report of scarcity of the No. 2 size canned tomatoes in this market was overplayed, for during the rush to cover on this size the market here went above $1.20, and as high as $1.25, while New York and other sections seemed to remain at or around $1.15. The market here has now reacted to that figure, and is so quoted this week. On the other hand, No. 10s have advanced from $4.25 to $4.50, showing that there was a possible error in the reported heavy supply of this size tomato. No. 3s are quoted at $1.35, both county and city. It may be possible that the first appearance of new tomatoes in the canneries here—a few early arrivals from Southern New Jersey—caused this weakness. Baltimore will always knock its prices down as soon as new goods come to the tables. The anxiety to sell goods as fast as packed, but actually as or before packed, is to blame for this.

CORN—The consensus of reports from Iowa and that territory generally is shown in one report just at hand as this is being written, and which says: "Sweet corn about 70 per cent of a stand; two to three weeks late. Will depend entirely upon when we get a killing frost."

Again, all corn-growing sections might echo this statement. Usually by this time of the year corn canners are beginning steady operations, and we have known times when the pack was quite well along at this time, but while roasting ears are in the market in more plentiful supply, you can imagine that the canneries are far from running when the hucksters ask 60c per dozen for it. A careful reading of the crop reports shows that corn canning will be unusually late, and that the crop and, consequently, the pack cannot amount to more than 70 per cent of normal. And it must have a late frost to get through on that schedule.

Owing to this uncertain outlook, corn canners are not willing traders, but demand and inquiry for corn are both quite good. There are no price changes from last week, but the market is firm, with promise of further rises. The western section of the country seems to be particularly confident of corn prices, and there is no weakness there.

STRING BEANS—Just after the Government made its favorable report upon the string bean crop of the country, reports began to come in to us of the poor condition of this crop. As we said when commenting upon the Government's report, it was surprising to see this crop in good condition in the face of weather which was anything but good for beans. If the stringless bean crop and pack comes through with a good showing, we will acknowledge our surprise. Bean canning is on in full swing, but the prices are too high. The bean growers blame this on the high prices they have to pay to get the beans picked, and say that they must get $1.25 per bushel to come out even. Bean picking is becoming a little too strenuous for most labor nowadays, and the big colonies of Italians and other foreigners are not to be had any more. This is just one instance where the present un-American immigration laws are hitting the American consumer under the belt, and hitting the canners in particular a wallop. And it will grow worse instead of better.

We heard reports to the effect that, owing to the recent law passed by the Government regulating the taking of salmon, that that industry would be badly crippled, if not killed, and that the packs would be only a percentage of former ones. A disinterested fishing source now reports the greatest run of salmon ever known, and that some canneries have taken as much in two weeks as they did a whole season before. Nature has a funny way of making a liar out of a market prognosticator, hasn't she?

The sardine canners, however, are still waiting patiently for their boats to come in, and the sardines are wanted.

NEW YORK MARKET

New Packs Coming In—Carryover About Exhausted—Florida Tomatoes Substituting Tri-States—New Corn Goes Well —Pea Pack Larger Than Was Looked For—California Fruit Prices Higher—Red Salmon Are Running Short—Maryland Stringless Beans Are in Demand.

New York, August 7, 1924.

By "New York Stater,"
Special Correspondent "The Canning Trade."

THE SITUATION—There has been some easing up in the spot situation during the past week. The time for early deliveries of future purchases of some varieties of canned vegetables has arrived, and as a result many of the buyers are now out of the market for spot supplies, temporarily, and are devoting their attention to the handling of their early shipments of new packs. Despite this situation, however, there has been no weakening of the spot price basis, and the general impression seems to be that the limited spot holdings will be absorbed at current values before the end of the season.

Stocks Light—The trade goes into the new season in a very strong statistical position. Holdings of 1923 pack have gone into consumption to a great extent, and the carryover is practically nil on many lines. This scarcity of 1923 packs applies not only to jobbers' and canners' stocks, but is true, also, to a great extent of the retail grocers' holdings.

Florida Tomatoes—An indication of the shortage of tomatoes from the usual sources of supply for this market is furnished by the action of a leading chain store operating locally, which is featuring Florida packed standard tomatoes. The stores in question normally run on Tri-States pack.

Tomatoes Lower—The old tomato season is now merging with the new one, and the usual readjustments of prices are being made. While Baltimore canners quote spots from the old pack for prompt shipment at $1.12½ to $1.15 per dozen, country packers are offering standard 2s for immediate shipment at $1.00 to $1.05 per dozen, while business is being taken on new pack for later shipment at 92½c per dozen for this size and grade. Standard 3s offer at $1.35 per dozen for prompt shipment, and $1.32½ on future contracts, while 10s are quoted at $4.25 for prompt shipment, and the same price for later shipment. All of the foregoing prices are f. o. b. cannery. Buyers are now weighing all of the reports received regarding pack outlook, etc., in an effort to gauge the future situation more accurately. Fair buying during the week, however, indicates that buyers are fairly certain regarding the outlook for the immediate future. Present indications point to a probable pack of between 3,000,000 and 3,500,000 cases of tomatoes in Maryland and Delaware this season, but these figures, of course, are nothing more nor less than a guess. The story will not be told until the crop is in the cans.

New Southern Corn—Canners are offering new pack standard crushed corn at 95 cents per dozen, f. o. b. cannery, for the No. 2 size, and there has been a little buying interest at this figure. Many jobbers, however, continue to voice their disapproval of the designation of the corn as "crushed," feeling that this creates a prejudice against the corn in the minds of consumers. The term standard sugar corn meets with a much better reception from the jobbers and consumers alike.

Western Corn—Mid-Western packers continue to offer new pack at 95 cents to $1.00 per dozen, f. o. b. cannery, with extra standard 5 to 10 cents per dozen higher. A good buying movement was reported during the week.

Fancy Corn—A little Minnesota fancy Crosby was reported available at $1.30 to $1.35 per dozen for new pack for later shipment. Fancy Minnesota Golden Bantam was quoted at $1.65, factory. The outlook for the pack in Maine is more favorable than earlier reports had indicated, but little is being offered, most canners having sold sufficient futures to take care of the pack they are sure of making. They prefer to withhold any surplus corn they may have this season for the later market.

Maine Peas—Several of the Maine canners are working on peas this year. The pack last year was more or less of an experiment, and it turned out very satisfactory. The pack is of fancy, extra standard and standard quality, and has met with a good demand this year, the quality being reported as excellent.

Wisconsin Peas—Late reports indicate that the total pack of peas in Wisconsin this year, the yield of Alaskas being much larger than packers had looked for. There is some surplus of Alaskas available, and packers are now offering these goods at $2.50 for fancy 1s, $1.95 for the "near fancy" grade of 2 sieve, $1.35 for extra standard 3 sieve, $1.20 for extra standard 4 sieve, and $1.15 for standard 4s Alaska.

California Fruit Quality—Disquieting reports are being received from California regarding the quality of peaches and apricots for canning this season. Present reports indicate that the pack of seconds and standards apricots and peaches will be large, while the production of the higher grades will be correspondingly small. The California Packing Corporation has issued a revised price list on new pack fruits, showing slight upward advances on many grades. Standard peaches are advanced to $2.25 in the new list. Other packers are either advancing their prices, or withdrawing from the market. Some buyers, however, have consistently discounted the bullish reports of the California canned fruit situation, and have bought only enough to take care of their early requirements, expressing the belief that when deliveries of future purchases have been made by the packers there will be sufficient surplus stock on hand to take care of the demands of buyers for the balance of the season.

Salmon—Reports from the Northwest indicate that the pack of reds in the Western Alaska district is running short. The run of chums has been good, however, and it is understood that the pack to date has been large. Pinks, however, are running short, and packers are predicting a marked reduction from 1923 production figures on this grade. Warmer weather all over the country has stimulated the demand and sales, but the market has remained unchanged as to price.

Sardines—Buyers are still remaining out of the Maine sardine market to a great extent, and are buying only in small lots for immediate requirements. The market has evolved into a test of staying powers on the part of the jobbers and the packers. The latter have held consistently thus far for an inside price of $3.75 per case, f. o. b. cannery, on quarter keyless oils, while distributors have been trying to force the market below that figure.

Tuna—The position of the market has strengthened a little as a result of the fishermen's strike, which has tied up the packers. Buyers, however, continue bearish on tuna, following recent price reductions.

Beans—There has been a good demand reported during the week for Maryland pack string and stringless beans. No. 2 cut green stringless have sold as low as $1.10, it is reported, but the general market holds at $1.25. Wax stringless beans range $1.15 to $1.25 for standard 2s, with 10s at $6.00 per dozen for full standards. Maine packers are starting their run on beans this week, and look for a good pack.

ST. LOUIS MARKET

The Market Generally Firm—The lateness in Tomato Pack An Advantage in Cleaning Up 1923 Pack—Weather Influences Future Corn—No Overproduction of Peas —California Fruits Are Strong—Canned Foods Prices August 7, 1924.

St. Louis, August 7, 1924.

By "Missourian,"

Special Correspondent "The Canning Trade."

THERE is little change to record in the market for canned foods. Most canned foods distributors are devoting their attention to pickups, and are keeping their assortments down in order to replace them with new packs as they appear on the market. They can readjust prices in that way if the occasion should require and no long lines which might cause losses by being bought too high. Buyers are always looking for real bargains. The volume of future business is limited, as canners are more or less withdrawn from the market, or where they are open for business they are quoting figures which do not appeal to jobbers.

Tomatoes—Prices on new pack tomatoes are firm. The Tri-State season is late, and there will be no early deliveries. There is enough of the old pack, so the lateness will not bother the trade. It will only help a better cleanup of the 1923 pack. Canners in the South are not willing to sell freely because they do not know how their packs will turn out, and buyers are not so sure that the production will be as low as the canners predict. It is a standoff. California packers are more or less out of the market.

Corn—Corn is moving, but only in a routine way. Standards are steady and fancy firm. Futures are influenced by weather conditions, so canners are a little cautious about accepting new business. In fact, they are withdrawing their quotations and offerings. Very few cheap Southern standards can be had.

Peas—Conditions in peas have not changed. Wisconsin packers are not ready to push their insold packs, and insist there will be no overproduction of any sizes or grades. It is said, however, that if the Wisconsin pack is short, it will be in the larger sizes in particular. As for sweets, the weather has to be considered. Indications point to a fairly full crop. There has been a heavy future contracting, and while trading is quiet, the volume of business will be much greater than it was a year ago.

Miscellaneous—String and stringless beans from the South and beets, succotash, spinach and asparagus are well taken locally, with prices holding firm. New pack business, with the exception of spinach and asparagus, is of good volume. Trading on the spot and from packing centers for quick shipment has been of more importance. Stocks of free-selling lines are going into consumption at a wholly satisfactory manner.

Fruits—As the season advances California packers become more firm in their views. They are less anxious to sell and are more inclined to withdraw or advance their quotations on the whole line. It is difficult to get confirmation on pears. There is a stronger feeling, also, in peaches. Canners maintain that the pack of the State will be very small. The altered situation has caused more interest in fruits. There is more general buying of the whole line. Some dealers are looking for discounts under quoted prices, but they show more inclination to buy, and where sales have been accomplished it has been the buyer who has met the packers' views and not the packer who has made the concession. Pineapple is steady and is in fair demand.

CHICAGO MARKET

New Packs Are Fine Quality Packs—Big Demand for All Varieties—Another Consideration of Quality—Very Few Price Changes to Be Noted.

Chicago, August 7, 1924.

By "Wrangler,"

Special Correspondent "The Canning Trade."

THE canned foods market has begun to take on some life, and brokers and buyers have turned up the corners of their mouths, which have been turned down for some time, and are now smiling.

New Pack Arrives—The reason is that cherries, berries, peas and a few other articles of the new or 1924 pack have begun to arrive in Chicago and the shipping floors, railway stations and steamer docks are beginning to take on the appearance of canned food warehouses, as the fine quality, new pack of 1924 commences to roll into this market.

Immediate Delivery—The goods are delivered to city retailers and shipped to country retail grocers as fast as they can be handled, for there is an urgent demand for all kinds of canned foods.

Condition of the Market—This despite the fact that the markets are heavily supplied with fruits and vegetables in their natural state. All of which goes to show that no other form of food is so convenient, or more popular than canned foods. It also shows that the market has never been in as good situation, from a supply and demand standpoint, as it is at this time.

The Reason—Canners are to be congratulated, for their determination to pack quality goods has had most to do with the condition of the market, and the "sold out and gone" condition of the pack of last year. Then, the canners have loyally given their co-operation to the distributors in helping them to educate the consumers of this country as to the desirability, safety, wholesomeness and excellence of canned foods.

Canners have come to see that "the foundation of business is confidence, which springs from integrity, fair dealing, efficient service, and mutual benefit."

Those who are engaged in the canning and conservation of the food supply have reason to hold their heads high, and to be proud of the blessed usefulness and humane value of the industry in which they are engaged.

We hear a great deal said in these days of many preachments about quality, and it is true that too much can hardly be said in advocacy of quality in canned foods, but we must not forget that the economies of food conservation and production must be remembered, and that nothing which is edible and nutritious must be wasted. If standard foods must be packed, let them be really standard and not sub-standard. There are

millions of people who cannot afford to buy fancy qualities, and good standard quality in canned foods is just as wholesome, nutritious and more economical as fancy quality. Then, a producer, grower or canner of food products must take what nature gives him and make the best he can of it, wasting nothing and discarding nothing except that which is unfit for food for people, and even that can be used for food for animals. If canners undertake to put only extra-standard or fancy quality into their cans, discarding everything below those grades, it would so increase the cost of their output that prices would be burdensome to the consumers and almost prohibitive, and would illustrate the old proverb "Wilful waste makes woeful want."

Prices—There is very little to be said about prices or market changes, as there are very few. The marekt as to prices is steady, and this applies to futures, as the spot market is practically closed for lack of supplies.

It is known that Iowa has sold a million cases more corn for the delivery from the pack of 1924 than at this time last year, but it is not known what the situation in Minnesota, Maine, Maryland, Illinois, Ohio, Indiana, Wisconsin or other corn-canning States is in that respect as to advance sale of canned corn. Nor is there any information as to the volume of sales of any other articles in canned foods.

I like the position of Iowa in that particular as to furnishing the statistics of the future pack as sales progress, and think that all the canning States should furnish that information through their State Associations to the buyers and distributors. I think the canning industry is now so strongly established in confidence and credit that it can play the game in the open without evasion or concealment or reservation, and that the candid presentation of the facts of the season's progress in sales and contracts would give to buyers again that confidence which they seem to have lost to an extent, and inspire and encourage them to buy goods for future delivery as they used to, and not be feeling cautiously along, believing nothing that their brokers tell them, and constantly bearing the market like a man groping in the darkness, not knowing the way and without a dependable guide.

What Canned Foods Distributors are Doing

President McLaurin Advises Jobbers to Stop Price Cutting and Giving Away of Discounts—John W. Morey, New President of National Wholesale Grocers' Association, Appeals For Cooperation and Suggestions—National and American Associations Resume Diplomatic Relations—Notes of The Trade.

AN interesting bulletin on the subject of gross margins, and economies in the wholesale grocery field, containing many interesting figures on costs, etc., has been prepared and sent out to the trade by J. H. McLaurin, president of the American Wholesale Grocers' Association. In this bulletin Mr. McLaurin writes:

"We have challenged the fairness to the trade and the accuracy of the statement that has been widely published, to the effect that—

> "'The solution of the problems that confront the trade does not in any way lie in the direction of wider margins, but rather in the introduction of economies.'

"In questioning the fairness and accuracy of this statement we have fully appreciated the value of the studies that have been made of operating costs in the wholesale grocery trade and the dire need for realizing all possible economies in operation.

"We have said and now repeat, with full conviction of its essential truth, that sound economics must have prior line to economies, important as they are. Every service which you perform has its expense attached, and just as far as that service is necessary and worth while, just that far it requires and deserves recompense. A merchant is the servant of his customers and the true servant is worthy of his hire.

"The gross margin, as we have pointed out, is computed by substracting from total net sales the total cost of merchandise sold. Obviously the difference between this gross margin and the total cost of operation measures the profit realized from carrying on the business. This difference between gross margin and expenses of operation is affected both by variations in operating expenses, increasing as these expenses decrease and decreasing as these expenses increase, and by variations in the gross margin itself either by a relative increase in net sales or by a relative decrease in cost of merchandise sold.

"The issue which we have raised is, then, whether or not a better profit showing can be realized in no other way than by reducing operating expenses through economies or savings in the expenses of operation.

"On this issue our position is that until sound principles of economics are introduced into the trade and unswervingly practiced by wholesale grocers, economies or savings in operation may be and too often are futile. Of what use is a saving in expense that is given away? Of what use is a "paper" gross profit that is not realized in the prices actually received? Of what use is an attempt to cut down operating expenses when certain services at an increasing cost are given free of charge to the customer?

"Are we not right in our position that sound principles of economics, including correct and fair price levels, fair and uniform merchandising practices, performing in the most efficient way possible those economic services falling within the scope of wholesaling, asking and receiving a fair and only a fair reward for services performed—that these principles are the only safe foundation upon which to build a business?

"Surely, the primary motive behind the movement to study costs of operation is that such information is necessary to a fair markup of price policy. There are, of course, other very important advantages to be gained from a knowledge of operating costs, but there is no possibility of an intelligent pricing system without it. Such knowledge has a direct bearing upon the gross margin. It means a more equitable distribution of costs among the various commodities handled. This is the most difficult and complex problem which the wholesaler has to face.

"A typical wholesale grocery establishment will have around 1,000 live accounts, each one representing on the average from about $800 to $1,200 in annual purchases. While compared with some complicated manufacturing processes, the wholesale grocery business is a simple process, so far as the actual handling of foods is concerned, the great number and variety of items carried makes very difficult an accurate accounting system. In the larger establishments the number of different individual items ranges from 7,000 to 10,000. It is the task of the manager of such a business to give to each item its appropriate markup, with due regard for original cost, handling, warehousing and delivery charges, a proportionate amount of overhead expense, selling cost, and competitive price in the market.

"Furthermore, in only a small and indirect way is the wholesale grocer affected by the introduction of machinery, by new inventions or by progress in the industrial arts. It is not possible for him, as for the manufacturer, to transfer human skill and intelligence to iron and steel in the form of machinery and command them to apply their tireless energy in his service. There is apparent today no possibility of revolutionizing the handling of goods by wholesalers, by the introduction of labor-saving machinery. To be sure, the building of good roads and the increased use of motor trucks have brought certain changes and certain complications, but no simplification or saving—rather a new service without adequate recompense.

"The wholesale grocery business is notoriously run on a narrow margin of profit. A relatively large annual sales for the investment is typical. Hence, a minute saving on each item or on several items might bulk large in the net profit showing. This is the value of even small economies in operation. The very same principle applies to correct pricing and the adherence thereto. There is no value in the principle of economy in opera-

tion that does not apply equally to proper pricing and the unfaltering maintenance of honest, fair-to-all merchandising methods.

"This is our plea: Economies or savings mean nothing if given away. Discounts mean nothing if given away. Service means nothing if given away. A merchant really has only what he retains. If he breaks packages for nothing, if he delivers goods for nothing, if he transfers to customers his discounts, if he does not have the courage to live up to a price carefully prepared to be honest to the manufacturer, to the retailer and to himself, there is really little practical use in his seeking earnestly after economies in operation."

Morey Asks Support—John W. Morey, of the Morey Mercantile Co., Denver, Col., new president of the National Wholesale Grocers' Association, has addressed a personal message to members, as follows: "The great honor conferred on me by our Association at its annual meeting in Chicago recently deserves more than a general acknowledgement. I would like to thank each member individually, but in the absence of a better method will ask you to consider this a personal expression of my sincere appreciation. In administering the affairs of our Association we will endeavor to follow in every way the principles and policies so wisely established by the founders of the Association and so consistently adhered to by previous administrations. There has been a tendency on the part of some in various lines of business to look to their trade associations for relief from all their difficulties caused by present business conditions. This is wrong. There are certain very definite boundaries beyond which the Association cannot legally go and also certain activities which cannot be handled satisfactorily by the Association, even though they might be entirely proper from a legal point of view. There are some problems which can be solved only by the individual business man for his own business. On the other hand, our Association, through educational co-operation with retail grocers, manufacturers, canners, government agencies, etc., will continue its efforts to improve business conditions where it can legally do so and to ward off action that might prove unfavorable to our business. Every effort will be made by our Association to further the interests of wholesale grocers in every way possible, and at the same time to avoid all activities which are even questionable for legal or other reasons. The advice and criticism of individual members is essential to the success of any administration, and I hope that everyone will feel free at all times to communicate with me or with any other officer or Executive Committee member. A personal exchange of ideas would be of even greater advantage, and I and the other officers and directors of our Association will deem it a personal favor if you will call on us whenever the opportunity presents itself. Please do not hesitate to suggest and criticize freely regarding matters which we have done or activities which in your opinion should be undertaken."

American Opens Federal Tax Service—The American Wholesale Grocers' Association, which has just removed its headquarters to Washington, D. C., announces that it has established a Federal tax service, under the direction of C. B. Hurrey, former deputy commissioner of internal revenue, and a well-known attorney of Washington, specializing in taxation problems. It is the purpose of the new service to furnish free all information requested by wholesale grocers concerning all matters of Federal taxation. The service is open to all wholesale grocers, whether or not they are members of the American.

Harmony in the Industry—After several years of strained relations between the National Wholesale Grocers' Association and the American Wholesale Grocers' Association (formerly the Southern), the two organizations have worked together to a point where co-operation in trade problems is assured, and the old feeling of hostility has vanished.

Following the election of John W. Morey as president of the National Wholesale Grocers' Association, J. H. McLaurin, president of the American, wired Mr. Morey as follows: "It is with profound satisfaction that I learn of your election to the presidency of the National Wholesale Grocers' Association. Permit me to express to you my sincere good wishes for a most happy and successful administration."

In reply Mr. Morey wired: "I very much appreciate your telegram, and reciprocate your good wishes. I hope that we may be able to work together in every way possible for the good of the grocery business."

Notes of the Trade—J. W. Herscher, president of the Hubbard Grocer Co., of Charleston, W. Va., former president of the National Wholesale Grocers' Association, was a visitor in the New York market this week.

Joseph Diflo, spot canned foods buyer for R. C. Williams & Co., of New York, is vacationing at his summer home at Rockaway Point.

The General Stores Syndicate, managed by M. Eiseman & Sons, Philadelphia, wholesale grocers, and formed by the merger of several Philadelphia jobbing houses, will operate a chain of grocery stores in the Quaker City.

M. L. Toulme, secretary of the National Wholesale Grocers' Association, is on a Western trip.

M. L. Morgan Co., wholesale grocers, of Bowie, Ariz., have moved their main office and warehouse to Globe, Ariz. A branch warehouse will be maintained at Bowie. All buying will be done at Globe hereafter.

HEEKIN CANS

What are your Requirements?

FOR years the Heekin Can Company has been a leader in its line. Tough, sturdy and air tight Heekin Cans are today the finest that can be made.

The Heekin line is complete—from the small vegetable and fruit cans to the large lard or sorghum containers, there are Heekin Cans for every need. And every one is an example of quality manufacture.

Heekin Cans are giving complete satisfaction to thousands of canned foods consumers every day. Heekin Cans will be delivered at your door in any quantity your fruit or vegetable crops specify.

Write us today and let us know your estimated canning requirements. We will gladly send you prices and complete information.

THE HEEKIN CAN CO.

New, 6th & Culvert Sts. **Cincinnati, Ohio**

Are people familiar with your brand?

Goods well displayed are half sold, and actual tests prove that good looking counter displays (silent salesmen) will positively increase sales.

How many brands of Canned Foods are actually called for by name? And isn't it true that crowded shelves confuse the purchaser so that the grocer's suggestions are usually accepted.

Why not let people become familiar with your label and ask for your brand by name? An attractive counter display will bring your can off the shelf down on the counter where it can be seen by everyone entering the store.

We have made a study of this subject and originated some particulary successful displays. May we plan one for you?

SMILE AWHILE

IT'S A FREE COUNTRY

Customer—"You say these trousers are all wool?"
Dealer—"Absolutely!"
"Nonsense! Why, man, I see boll weevil tracks on 'em!"
"Well, ain't a boll weevil got a right to change his diet once in a while, huh?"

THE REASONABLE DOUBT

Mrs. Nerveley—"Hear that burglar downstairs?"
Mr. Nerveley—"Nonsense! That's just the cat."
"Well, go down and make sure."
"Not on your life! I'm not that sure!"

ILLUSTRATED SONGS

Mrs. Murphy (fifth floor)—" 'Tis a fine voice yer husband has. Last night I heard him singin' to yez, 'Sleep, Baby, Sleep; Close Yer Bright Eyes.' "

Mrs. Casey (fourth floor)—"An' he closed wan of them, too. Look at ut!"

MOST APPROPRIATE

In signing a state bonus blank a New York City notary accidentally affixed this stamp under his name:

"Past Due. This account has, no doubt, escaped your notice. Will you please favor us with remittance by return mail?"—Signal Post, New York City.

HOT OFF THE WIRE

Voice on Phone—"Gimme Main 4."
Operator—"You should say 'Main oh, oh, oh, four."
V. O. P.—"Oh, oh, oh, yes."

IN THE ROOTING SECTION

Angry Patient—"I thought you were a painless dentist? Didn't I just hear a man howling in there?"

Dentist (brilliantly)—"Ah, sir, he was just cheering my feats of strength."

THE PROPER AUTHORITY

First Hobo—"Dese prohibition people are tryin' to tell us wot we had ought and wot we had oughtn't to drink."

Second Bum—"De noive! Dat's a discrimination wot had ought to be left to de bartender."

RENOVATED HISTORY

It has been definitely admitted that Sir Walter Raleigh's remark to Queen Elizabeth in the famous cloak-and-puddle episode was: "Step on it, kid; step on it!"

OH, I SYE!

Peggy—"How did you get along with the Englishman?"
Polly—"Fine! Told him some funny stories and he took them seriously."

D——!

Mother—"Did I hear you say 'darn'?"
Susie—"No, mother. I don't use baby talk."

ONCE A GENTLEMAN—

Whazzle—"Well, did you work out that plot all right?"
Wackum—"Yes. The hero's washed ashore with four cases of food but no fork, so he starves to death."

FROM EXPERIENCE

Patron—"I want to get a pair of stockings for my wife."
Salesgirl—"I'm sorry, but we only carry silk ones in this department."

EDITORIALS

ABOUT TIME TO QUIT—We are ever loath to condemn any kind of food, and, in fact, we cannot recall ever saying before that any food should not be attempted in tin cans; but we feel like saying that now—in the case of ripe olives. Ripe olives are a new form of food but recently introduced, and they look like a very unwelcome guest among canned foods. They seem to be a breeder of trouble, and trouble of the kind to which the other canned foods may, very properly, seriously object. Leaving the chemical, bacteriological and other such technical considerations for men of those callings, we can but observe, as does all the consuming public, that ripe olives are the cause of much unfavorable criticism in the daily press, their main trouble seeming to be as the "carrier" or the cause of botulinus poisoning.

It may be hard, and is hard, upon the packer of ripe olives to have his favorite child thus branded, but there is such a thing as "a disease carrier" known to medical science among humans, and ripe olives would seem to be such among canned foods. Therefore, some steps must be taken against the unfavorable reflection cast upon all canned foods. Because the average consumer does not draw any fine distinctions. Tell her that any canned foods contain, or are liable to contain, or have contained botulinus poisoning, and she will straightway discard and draw a severe embargo against all canned foods. The man who would say that the recent poisoning in Wyoming, due to ripe olives in cans, has not hurt general canned foods consumption is blind to the facts. Certainly he can well recall the original olive-poisoning cases and their terrific effect upon this industry; and if he does not, we would remind him that in some States the sale of all canned foods was forbidden for a time by the food authorities. Repetition of the trouble has dulled the edge of this scandal, but that is all, and the danger is still very grave. And it has been the ripe olive that has been the cause of it in nearly all cases.

If this were a product of great importance in the list of canned foods it might be worth fighting for, but as the case stands it would seem to be the better part of valor to discard ripe olives from cans entirely, and take no chances.

You have probably noticed that the Association of American Importers of Spanish Green Olives are taking steps to make the public understand that the accusations against olives do not apply to the green olive as generally known and very largely consumed. In large display advertisements they have just recently said:

All Olives Are Not Green Olives—

There Are Two Kinds

Folks have been familiar so long with green olives that a great many have not heard of the newer variety called ripe olives. Therefore, many people are apt to call all olives alike.

Such is not the case. The two kinds of olives are widely different. They are grown in different parts of the world. They don't even look alike. Ripe olives are black or deep purple. They taste nothing like the well-known Spanish green olives.

Green olives are, of course, green in color. They are picked when green, cured when green, and bottled when green. They are always packed in glass—**never in tin!** Green olives are healthful and always have been, as long as man can remember. Don't ask for just "olives." Say "Spanish Green Olives" to your grocer.

ASSOCIATION AMERICAN IMPORTERS OF SPANISH GREEN OLIVES

200 Fifth Avenue New York City

(The black-face type is ours.—Editor.)

This advertisement appeared in the daily papers, occupying a quarter page space, set in large type, so that no one could miss it. The imputation against the use of "tin" will not be found to the liking of the canned foods industry; but who can blame the growers and packers of the old, well-known and highly appreciated olive for defending this original article? As they say, the Ripe Olive is nothing like the big, fat, juicy, green olive, neither in appearance nor in flavor or taste. The ripe olive must be the fruit of an olive tree—and we

have seen them growing and tried to eat one from the tree, we will never forget—and they are, therefore, entitled to the name "olive"; but that is as near as they come to being an "olive" as known from earliest history, and the wonder is that the olive men did not long ago object to their being called olives.

However, the matter of taste is a personal matter, and we do not mean to enter into a comparison of the two. The ripe olive has earned a reputation for itself which the other items of canned foods seriously object to and must not be associated with, and it seems to us that we have about reached the time when steps should be taken to stop the canning of ripe olives. It is a protection the industry owes itself, and the fair name of all its products, and while it is unfortunate that it is so, it is not of our making, nor have we the control of it. It will not do to say that if the ripe olives are canned properly, in all particulars, that they will be perfectly safe. If the reports of the recent poisoning case are true, the packer of those olives is one of the largest and best in the industry, and the inference is natural that they are among the most careful—and yet the trouble resulted. There is a horror about the death of people from any food poisoning that nothing can obviate. Humanity will not stand this, and certainly the consuming market cannot.

CROP PROPAGANDA—At least a few men took the recent booming of the wheat price as pure political thunder, as a sop to the farmers to bolster their own political position. The daily press rushed out with the news of the wonderful fortunes this meant to the wheat growers, and how it had relieved their poverty and distress and brought millions into their bank accounts. On paper it undoubtedly did; but just how the farmer with no wheat to sell—because the advance was based upon the poor condition or destruction of the wheat crop here and abroad—could make money out of the absence of wheat on his acres is a style of mathematics we did not reach in school. We hope they all had wheat, and plenty of it, and fattened, or will fatten, their bank accounts as stated. They need it.

And the canning industry has not been entirely free of this sort of thing.

On the one hand, we have the canners reporting troubles with their crops; that the best they can see in prospects is from 60 to 70 per cent of a normal yield and pack. And then, on the other hand, come the professional—we will call them—crop reporters with reports of mammoth crops and great prosperity. The pea crop and pack of Wisconsin, for instance, is reported as unprecedented, with a possibility of 9,000,000 to 10,000,000 cases of peas for that State alone. Credit for these reports is given to the most reliable authorities on the one hand, and blame is placed with another source of the most trustworthy character for circulating such reports. But we believe that it is just the same virus working through the veins of men to place the farmer in a favorable position and make it appear that he is wallowing in prosperity in this eventful political year.

In any event old Dame Nature is not throwing down her hand. This big result predicted for Wisconsin had hardly been broadcasted before a deluge descended upon those pea fields, which reliable authorities say cut the "sweet" pea crops down by 25 per cent, and these same authorities now say that Wisconsin will be lucky if it produces 8,500,000 cases of peas as her 1924 effort. And, then, as if fearful that Minnesota, which is becoming a great pea-canning State, might make up for this shortage, there is reported severe rains and storms there, which have created havoc. Monday of this week saw the daily papers with reports of exceptional damage to all crops in Indiana, the whole State affected, and if you will take the trouble to look at the bottom of our Crop Reports this week you will find that in a place in New York State they had five feet of hail! You have it on the authority of the Associated Press.

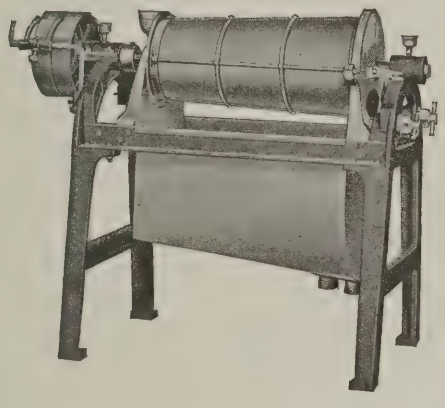
What is a canner to do in the midst of these conflicting reports as to crops and prospects? Sit still and don't rock the boat. The canners have never acted better than they are doing this season in refusing to be stampeded one way or the other, and to keep off the market with further futures. It is possibly the most eventful season any of us have so far seen; but the canners are playing the game to get some of the good profits when the year finally terminates by refusing to sell any more futures, and that is where they are wise.

MODERN REFRIGERATING AND CANNING PLANT AT ROSARIO, ARGENTINA

ONE of the large packing companies of Argentina has broken ground for their new $2,500,000 refrigerating plant in Rosario, Argentina, according to trade reports received from Consul Robert Harnden, Rosario, by the Department of Commerce. It is stated that this plant will be the most modern and best equipped in the Argentine. A tract of land comprising 160 acres fronting on the river has been acquired for the various buildings, corrals, etc., and the plant's capacity will be 1,200 cattle daily. These cattle will be drawn from the ranches surrounding the city.

In addition to refrigerating, canning will also be done, and a certain amount of pork products packed. Modern and substantial docks, warehouses and railway terminals are included in the plans, and when completed, as excepted, next September, 1,200 men will be given employment. At present some 600 are engaged on the construction work. All the machinery for the plant is being imported from the United States. Frozen meat will be shipped direct from Rosario to England and the Continent. Great interest is being shown locally in this new enterprise, and it is felt that large benefit will accrue to this entire district.

PRENDERGAST NOW WITH LOUIS HILFER



MR. RICHARD PRENDERGAST, who until recently was connected with J. J. Maloney, of Chicago, Ill., has joined our sales force. Mr. Prendergast has been "on the street" in Chicago about 12 years, is favorably known by the entire trade, and recognized as being thoroughly posted, especially on dried fruits.

We bespeak for Mr. Prendergast the same consideration and confidence bestowed upon us under our well-known policy: "We cannot succeed unless you prosper."

THE LOUIS HILFER CO.

THE INDIANA KERN FINISHER

All metal. Satisfies the most exacting demands of any packer. Is of sanitary construction throughout. Monel Metal used on the screen, under pan, and hood. Shaft of Tobin Bronze. Supplied with packing gland. A special washout plug is also now a part, with other added features. Has an increased capacity of 35%

Cincinnati, Ohio.

The Corn Ear Worm

By Mr. J. W. McColloch

Kansas State Agricultural College, Manhattan Kansas

Note—The above address delivered by Mr. McColloch sometime ago will be found very timely right now as the corn crop is coming on. You must be prepared to combat any attack, and you will find this helpful.

(*Continued from last Week.*)

A summary of the results of this experiment show that May 1 is the optimum time to plant field corn to obtain the maximum yield and the minimum amount of earworm injury. A study of the factors connected with the date of planting shows that early planted corn experiences less injury than corn planted later, because it passes through its most attractive stage, silking period, before the third and by far the largest brood has appeared.

The experiment further shows that corn planted so early as to receive a setback is injured more than if it were planted just a little later.

In connection with this experiment a study was made for six years on the number and location of the eggs deposited on definite plants of each variety in each plot. The results show that there is a direct relation between the number of eggs deposited on a variety and the date of planting, and that there are several factors to be considered in developing an optimum time to plant corn.

The variety of corn must be considered, since each variety exhibits certain variations with regard to growth, time of silking, period of silking and maturing. An analysis of the data indicates that from the standpoint of the number of eggs deposited, Boone county should be planted from April 15 to May 1, commercial white about May 1, and Kansas sunflower and Hildreth from May 1 to May 15.

In addition to the work with field corn, a date of planting experiment was conducted with sweet corn in 1912. The results were similar to those obtained with field corn in that the injury increased with the delay in planting. The plantings of April 15 and May 1 did not germinate.

Date Planted	% Ears Injured	% Grains Injured
5-15	30	6.4
6-1	75	5
6-15	98	24
7-1	92	22

Garman, working in Kentucky, has also made some observations on the date to plant corn. His results are in accord with those secured in Kansas. In his work he used such varieties as Stowell Evergreen, Early Red Cory, Iowa Gold Mine, Boone County White, Little Willis and White Flint.

In summarizing his results he says the varieties showed an increase in the injury with the advance of the season, the early plantings, without regard to variety, generally showing less injury than those planted later.

Spraying—The control of the earworm by spraying is based on the fact that the larva on hatching feeds for a short time externally in the vicinity where the egg was deposited, and also on the fact that most of the injury to the ears is due to the larvae hatching from eggs laid on the silks. Since most of the injury to corn is to the ears, the problem is one of keeping the silks covered with poison during the time they are fresh.

The results of the work in Kansas and elsewhere show that spraying is successful in reducing the earworm injury, but a satisfactory method of applying the poison is yet to be developed. The dust spray has proved the best under Kansas conditions. The material used is composed of powdered arsenate of lead three parts to sulphur one part. Other carriers may be used for the poison, but we have found sulphur superior to flour or lime, and there is some indication that it also serves as a fungicide.

As already stated, the methods of application are in need of development.

In Kansas, where the sweet corn areas are limited to home gardens and small truck farms, the use of a hand blow-gun, a cheese cloth bag or even a perforated can has proved practical. Several attempts have been made to devise a large power dusting machine for use in general fields. Thus far they have been futile. The principal objection to the power machines has been the great waste of material. As it is only necessary to get the poison on the silks, any additional spreading of the dust is waste. In the case of the power machines, large amounts of the powder do not fall on the plants but light on the ground.

Hadlee, working in New Jersey, gave the large machines a trial and found that they would not do the work of distributing the poison properly.

Spraying experiments of various kinds have been under way at the Kansas City station for a number of years. The work has been done on both sweet corn and field corn.

A dusting experiment carried on during August and September, 1912, on sweet corn, in which five applications of powder arsenate of lead were made, showed 37 per cent of the ears injured in the dusted plots to 86 per cent in the check. In other words, 63 per cent of the ears were entirely free of injury.

This test was especially significant since it was conducted in late summer at a time when the earworm is most destructive. Since that time numerous other experiments have been conducted, with similar results.

Time will not permit a statement of all the figures collected in these trials.

The following conclusions may be drawn from the work:

Proper dusting of the silks will reduce the normal injury by 50 per cent or more.

The percentage of earworm and mold injury decreases as the number of applications are increased.

The cost of dusting is prohibitive where corn is grown for grain or forage, but is practical where corn is raised for roasting ears, show purposes, or seed.

Many truck and home gardeners are now dusting their sweet corn in Kansas, with apparently good results. In addition to the results secured in Kansas with regard to dusting, mention should also be made to work done elsewhere.

Headlee, working in New Jersey, had excellent results when the dusting was done by hand. He reports that when the poisonous dust is properly placed on the corn silks, and maintained throughout the period, the silks are green and succulent, more than 75 per cent of the normal damage is prevented.

Garman, in Kentucky, reports rather poor results. This, however, is probably due to the fact that only one application was made and this was put on lightly.

Haseman, at the Missouri Experiment Station, secured a reduction of 45 per cent in the number of ears injured when dusted with powdered arsenate of lead.

To summarize the measures of control, the following recommendations may be made:

1. Plow during the fall or early winter.
2. Plant as early as possible without danger of a setback to the crop.
3. Plant the standard variety of corn best adapted to the locality.
4. Thorough cultivation during the summer.
5. Use arsenical dust sprays in case the crop is being grown for some special purpose whereby it will command a good price.

These methods have been given a thorough trial in many regions, and have been found effective and practical.

With certain modifications they may be applied to sweet corn as well as field corn. The chief prerequisite for their success is a knowledge of the life history of the earworm and then adapting the control measures to meet the conditions.

While the injury due to the earworm is materially reduced by the methods outlined, it is not reduced to the point where we would like to have it. In fact, nearly all of our injurious insects can be controlled to a much higher degree than the corn earworm. There is room for much additional investigational work, and in closing this discussion brief mention will be made of some of the more important lines of research which are now under way or should be taken up.

In the first place, the methods already discussed should be developed to a greater extent.

Date of planting tests with standard varieties of corn should be conducted in different localities throughout the range of insect.

In the case of the Hessian fly, which is so destructive to wheat, there is hardly a place but what the approximate date for safe sowing of wheat can be given.

In Kansas the exact date to plant wheat to obtain the maximum yield and the minimum injury from fly has been determined for every locality.

The poisoning of the larvae is still open for investigation.

While the proper poisons to use are fairly well established, the methods of application are still to be developed.

Another field of investigation is that of a study of the varieties of corn with relation to their resistance to earworm injury. It is a well-known fact that in the case of most of the injurious insects and plant disease that certain varieties or strains of plants are less susceptible to injury than others. Certain varieties of wheat are practically immune to rust. Other varieties show a marked resistance to the Hessian fly. We are just beginning a study of this phase of the problem with regard to the corn earworm.

General field observations in the past have often shown certain varieties of corn more heavily infested than others. For example, in a series of experiments with five standard varieties extending over a period of six years, Boone county white has invariably had the fewest eggs deposited on it, and the lower per cent of injury. On the other hand, Hildreth has had the largest number of eggs and the greatest injury.

A variety of corn known as White Democrat and recommended to the Kansas station as a variety resistant to the earworm was grown up in competition with twenty-five varieties during the past season. It was markedly free from injury and ranked high in yield.

Numerous other observations similar to those cited have been made both in field corn and sweet corn. The results are suggestive and indicate the possibility for future work.

This is one of the major projects in the earworm work at the Kansas station at this time.

A variety test involves the study of many factors and the accumulation of a vast amount of data over a period of years. It also requires the close co-operation between the entomologist, plant breeder, agranomist and chemist.

The habit of growth and behavior of the different varieties must be studied under varying conditions. The date of silking must be determined with relation to the number of broods of earworm. The period of silking is an index to the period that the plant is most attractive to the adults. The period between silking and maturing determines the time the ear is subject to injury by the larvae.

The morphological and physiological characters of each variety must be investigated, since, as will be pointed out, there is an apparent correlation between certain of these characters and the activities of the insect.

The speaker is of the opinion that morphological and physiological studies open the way for certain intensive studies which ultimately will prove valuable in the development of control measures.

There is no question but that more fundamental study of many points in the life economy of the earworm are necessary.

The antamologist has devoted too much time in the past to general life history studies. Too much emphasis has been placed on the length of the various stages in the development of the insect.

We say that the egg of the earworm is placed on the silk or the upper surface of the leaf, but we do not stop to consider why this is so. The research work of the future not only with the corn earworm, but also with other insects, is going to investigate the why.

In connection with this line of thought, permit me to call your attention to certain investigations which are now under way at the Kansas station.

Service Counts

The ability to obtain deliveries in times of stress is one of the determining factors in selecting one's Source of Supply for Sanitary Cans.

Quick and Efficient Service in connection with Double Seaming Equipment is also of the utmost importance.

Our constantly increasing Clientele is convincing evidence that we excel in both of these phases of Can Manufacturing.

Greater Efficiency

Just as the modern canner's machine method of canning and sealing is an improvement over the housewife's hand method, so the distinctive sanitary cleanliness produced through the use of

Wyandotte Sanitary Cleaner and Cleanser

is an improvement over ordinary cleanliness.

This cleaner embodies certain principles not common to ordinary cleaning agents. Its uniformity, its purity, and its easy rinsing qualities, all contribute toward an unusual cleaning action which produces a film-free, oderless, sanitarily clean surface.

The advantages of Wyandotte cleanliness in the cannery are shown by the sensitive nature of the canner's product, and the saving its maintenace makes possible, by a preventable cleaner which eliminates flats, sours and swells.

Indian in circle

It Cleans Clean.

The J. B. Ford Co. Sole Mnfrs. Wyandotte, Michigan.

I have called your attention to the fact that the moths show a decided preference for the silks in ovipositing. When these are not present the upper surface of the leaves and the stalks are selected. Certain preliminary experiments have been conducted during the past two years for the purpose of determining why the adults select these parts.

In the case of the silks the attraction appears to be the odor, and adults have been drawn to foreign substances for oviposition by impregnating these substances with the odor of corn silk. The upper surface of the leaves and the stalks seem to be selected because of their rough, hairy surface. Plants with smooth leaves and stalks have very few eggs deposited on these parts.

It is also worthy of note that throughout the wide range of plants on which the earworm oviposits, there is an apparent selection of rough, hairy surfaces.

Other morphological characters are associated with various activities of the corn earworm.

Collins and Kempton, of the U. S. Department of Agriculture, have conducted certain experiments of the breeding of sweet corn resistant to the corn earworm. In their work they considered four protective characters:

1. The prolongation of the husk beyond the ear.
2. The thickness of the husk.
3. The texture of the husk.
4. The presence or absence of husk leaves.

They found low damage to be associated with a number of morphological characters.

Of the characters measured, they found the prolongation of the husk beyond the ear to be most closely related with low damage.

They summarize their results by saying that it appears that by increasing the length and thickness of the husk covering and reducing the husk leaves, varieties of sweet corn can be produced in which damage from the earworm is materially reduced.

The practical application of many of the results obtained in these morphological and physiological studies may appear somewhat vague at this time.

Mr. Parker, in charge of the plant breeding work at the Kansas station, tells me that the plant breeder can probably handle any promising characters which the entomologist may find as offering resistance to the earworm. For example, the rough, hairy surface of the leaf and stalk may be changed by breeding.

Likewise, the characters mentioned by Collins and Kempton can be developed to a high degree.

In conclusion, the speaker would call attention to the fact that the corn earworm has not been given the study that it should receive as a pest of sweet corn.

The entomologists of the various experiment stations in the sweet corn area should be asked to conduct a thorough investigation of its life economy and methods of control.

The corn earworm presents a problem of great importance and one worthy of the attention of the entomologists wherever corn is grown, whether it be field corn or sweet corn.

The Kansas station considers it one of the big problems and the work is being enlarged from year to year. Ultimately we hope to have something to offer whereby the loss due to the earworm may be reduced to a minimum.

FRENCH SARDINE INDUSTRY STILL IN DIFFICULTY

NO compromise has yet been reached by the sardine fishermen and packers of the Brittany coast, reports American Trade Commissioner Green to the Department of Commerce. A dispute has been raging for some time between the two factions, the packers claiming that the fishermen have in the past deliberately destricted their sales in order to keep prices up. Intense feeling has been aroused among the fishermen over the continued activities of the packers' boats, which, it will be recalled, were first out into use two years ago, when the regular fishermen refused to deliver more than one-half of the normal number of fish. Contending that their deliverate restriction on the amount of the catch was not only lawful, but essential to their welfare, the fishermen now insist that these boats be withdrawn permanently from service. The abundance of the catch has forced down prices paid the fishermen.

The latest compromise suggested and agreed to by the manufacturers is that the price to be paid for the fish by the factories be changed no oftener than once a week, and that the factory boats be removed to another district as soon as the catch in a given district becomes so large as to force down the price. Pending adjustment of ths dispute, fishermen in the principal sardine district of France—that is, Brittany—have entirely suspended their work. Realizing that this action would not be effective as long as the factory boats continued to operate, the fishermen have also succeeded in causing a strike among the crews of the factory boats, thereby depriving the factories of all their sources of sardines.

Newspapers in Paris interested in the question are clamoring for an early adjustment of the dispute, but neither of the two parties involved shows any inclination to give in to the other. If they continue being able to persuade employees of the factory boats to stay in port, the fishermen will probably be successful in forcing the packers to dispose of their boats and leave the fishing entirely in their hands. They promise that once these boats are withdrawn permanently they will see to it that the factories do not suffer from a shortage of sardines.

COMMITTEE ON STANDARDS TO HOLD MEETING

THE Joint Committee on Definitions and Standards will hold its 26th meeting in the Bureau of Chemistry, August 18 to 22, inclusive, according to an announcement by Dr. W. W. Skinner, Chairman of the Committee. Proposed standards for ice-cream, meat and meat products, wheat flour, jams and jellies will be discussed.

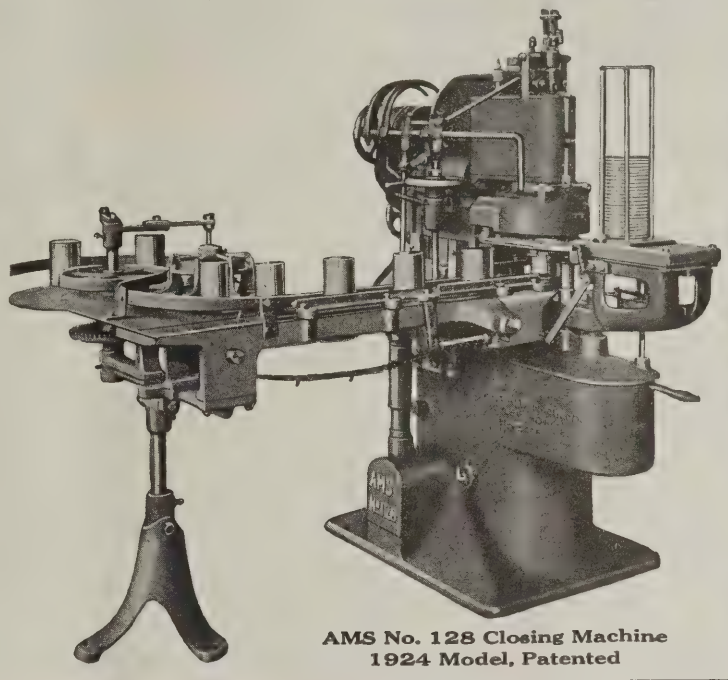
The Joint Committee is composed of nine members, three representing the Association of Official Agricultural Chemists, three representing the Association of American Dairy, Food and Drug Officials, and three the United States Department of Agriculture. This committee recommends definitions and standards for food products for the guidance of Federal and State officials in the enforcement of food laws.

MAX AMS Closing Machines

Made by the Pioneer Builders of Sanitary Can Making Machinery and used All Over the World.

Two heads may be better than one for some things—but not for Closing Machines.

In Closing Machines with separate heads for each operation, where the can must pass from one chuck to another, it is very difficult to center the can on the second chuck. All too often it is not centered and a cut or split top seam is the result.



AMS CLOSING MACHINES have only one seaming head. The can is completley double seamed without moving from the original chuck. The seaming rollers (one for each operation) are set in the wonderful AMS SPLIT SEAMING RING (patented) which has just the right amount of spring to offset the extra thicknesses of tin at the side seams. Therefore, there can be no cutting of the side seam nor cutting or splitting of the top seams on an AMS CLOSING MACHINE.

Insure tight seams for your pack this season by using AMS CLOSING MACHINES.

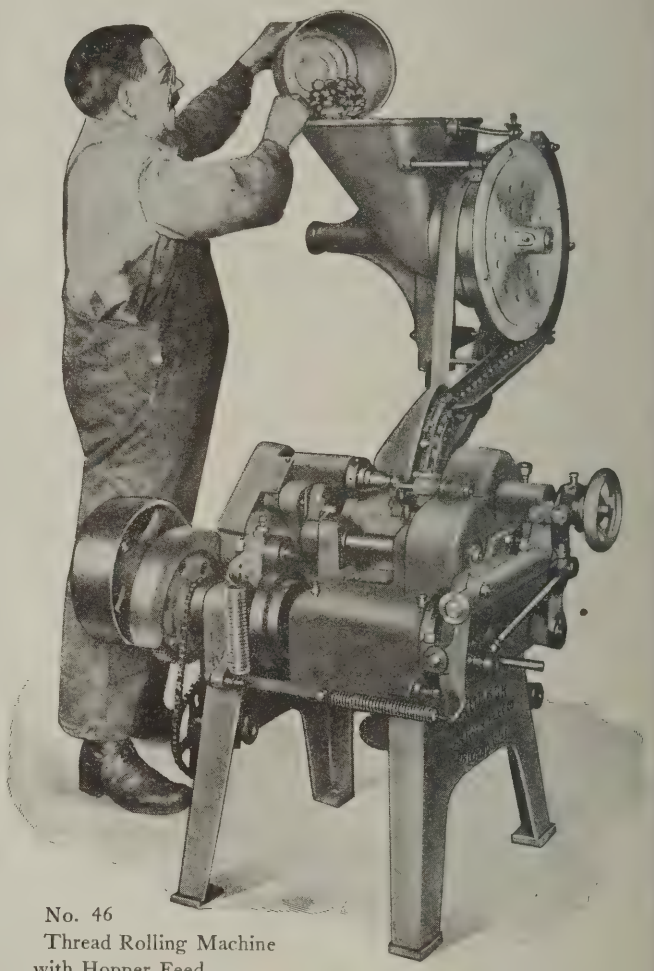
SOME NEW CANNING LITERATURE

Recent Issues of Books Interesting to the Industry

SOME years ago there were but few books on canning, and some of these were foreign books dealing in part upon the art of canning. This past year, however, has seen a wonderful increase in this effort, all seemingly having taken the fever at once, and as a result there are several new books on our desk, and all dealing with canned foods in some way. The first of these, in importance, we believe, is:

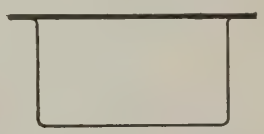
"A Complete Course in Canning," 5th edition, and not because it is published by us, but because it is one of the oldest books of them all, if not the only book which gives specific and definite instructions upon the handling of all canned foods, preserves, pickles, condiments, etc., from their growing and harvesting to the finished product in the warehouse, it is mentioned first. In other words, it is a practical treatise upon the entire subject, written so as to help the processor or old canner, as well as the beginner at the business.

This 5th edition is just the old book, but thoroughly revised and greatly enlarged, 400 pages, every process in it having been carefully revised and brought into line with the latest and best in scientific discovery, and all new items added. Owing to the many necessary alterations in processing methods, this makes this 5th edition practically a new book, and helpful to a remarkable degree to every man handling canned foods, or the kindred lines. An addition of value has been the food law regulations, covering every article on which rules or regulations have been issued, and also a compilation of all these rules and regulations, the first time and the only place where this can be found. The new edition, therefore, lends itself directly to the manufacturer, to the broker and to the jobber handling canned or preserved foods, condiments, etc. The book is well printed, in large type, on clear white paper, permanently bound in leather cover, stamped in gold. The price is $10 per copy. For sale by all canning machinery dealers and by The Canning Trade, the publishers.



"The Story of Canned Foods," by James H. Collins, is a novel-like story of canned foods of more than ordinary interest. The author, a famous writer on industrial subjects, has mastered the real truths of canning in a way not often seen in the laiety, and he gives his reader many interesting historical tit-bits about this industry that makes one loath to put down this book until he has finished. It is a story about canning for the housewife and user of canned foods, and not intended as a scientific treatise on canning. As the publishers say of the Story of Canning:

"In an informal style the author tells how practically everything from hors d'oeuvers to pudding has found its way into cans, and how food so preserved can be kept in perfect condition not only for months, but if necessary for more than half a century."



The book is printed in large, clear type, on fine white paper, bound in cloth, stamped in gold, and sells at $3.50 per copy, by the publishers, E. P. Dutton & Co., 681 5th Avenue, New York City.

"Commercial Fruit and Vegetable Products," by W. V. Cruess, Associate Professor of Fruit Production, University of California, is one of the new books, and is termed "A thorough treatment of the applications of the fundamental sciences to the fruit and vegetable manufacturing and preserving processes, of the practical operation and control of fruit aid vegetable pre-

LANDRETH'S SEEDS

When you think of Seeds, think of Landreth, either for spot or for future. We are the oldest Seed House in America, this being our 140th year. If we had not given good seeds, good attention to business, and fair prices, we would not have existed so long. Write us for prices on any variety, in any quantity, at any time.

D. LANDRETH SEED COMPANY

Established 1784 BRISTOL, PA.

serving plants, and of all the technical phases of the commercial handling of fruit and vegetable products." Professor Cruess is well known to the canning industry, having contributed many helpful scientific articles to canning literature, and, as might well be supposed, he has embodied this knowledge in his new book, and a great deal more that the industry will find helpful. He covers canning in a practical, detailed manner, and the book is particularly serviceable in the fruit lines, preserves as well as canned, because of the Professor's long experience with California productions. The book is printed in good-sized type on fine paper, 530 pages, thoroughly indexed, and is for sale by the McGraw-Hill Book Co., 370 7th Avenue, New York City.

"Marine Products of Commerce," by Donald K. Tressler, Ph. D., of the U. S. Bureau of Fisheries, is, as the preface says, "designed for both the scientific and the practical man. It attempts to give the chemist and biologist a general survey of the fishery industries, pointing out their relative importance, indicating their location, and describing the methods in common use." In the nearly 800 pages of the book, printed on fine paper, it deals with fishery products of every kind; the life habits and methods of catching and preserving all manner of fishery products; is profusely illustrated and completely indexed. The book is published and for sale by The Chemical Catalogue Co., Inc., 19 E. 24th Street, New York City.

EXTRACTS FROM WESTERN CANNERS' ASSOCIATION "REVIEW"

Written and Edited by John A. Lee
12 E. Grand Ave., Chicago, Ill.
July 31st, 1924.

This association is a member of the Chamber of Commerce of the United States, an organization which has a membership of about ten thousand of the most potent and important business organizations of the United States. It held an annual national convention recently at Cleveland, Ohio, and among other important matters adopted the "Principles of Business Conduct."

With the naming of local committees in over two hundred of the country's principal markets, the organization of Canned Foods Week, November 8-15, is well under way. These committees are being appointed by chairmen selected by the wholesale grocers' associations and the National Food Brokers' Association. Leslie Lieber, of the Haas-Lieber Grocery Co., St. Louis, is acting for the National Wholesale Grocers' Association; T. G. Perfect, of the Huntington Grocery Company, Huntington, Ind., for the American Wholesale Grocers' Association, and P. J. Murphy, of Deming & Gould Company, Chicago, for the National Food Brokers' Association.

Co-operating in the organization of the campaign are the American Wholesale Grocers' Association, the National Wholesale Grocers' Association, National Association of Retail Grocers, National Chain Store Grocers' Association, National Food Brokers' Association, Canning Machinery and Supplies Association, Glass Container Association, and the National Canners' Association. In addition to these, State canners' associations, State and local retail grocers' associations and kindred organizations will be invited to assist the local committees in making Canned Foods Week a success in their respective districts.

Provision has already been made for materials necessary to the campaign and for national advertising. A contract has been let for 30,000 muslin streamers for outdoor use on trucks and delivery wagons, and 600,000 four-color posters are being lithographed for use in windows and other indoor displays. One and two color electros reproducing the now familiar Canned Foods Week streamer will soon be available to the local committees, along with attractive stickers.

The semi-annual convention of the Western Canners' Association will be held in November, 1924. The location will be chosen by our Board of Directors. If you want to make any recommendations to them, write to them direct.

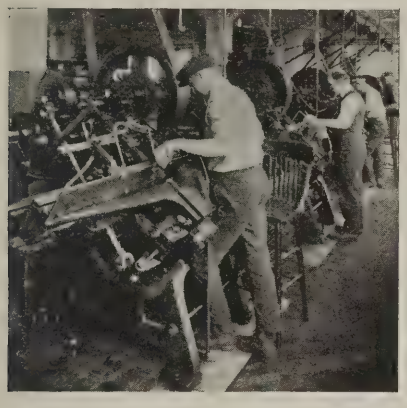
The exportation of canned foods for the year ending June 30, 1924, increased heavily over the previous year.

We gave you a complete list of all our standing committees in Review No. 9—this is No. 10—also a list of our new members. We sent you a copy of our constitution recently, containing a list of all our active and associate members.

From that and the list of new members mentioned you can tell who are members of the Western Canners' Association. We earnestly request you to secure for us, previous to November 1st, 1924, one new member, a canner, a broker, or machinery or canners' supply firm. Please do this. You need not collect the membership fee; that will be done from this office.

The wholesale grocery business is fairly good and a heavy fall business is anticipated. The big mail-order houses and ten-cent stores have been doing a large business, and the chain stores are doing a heavy business.

The independent retail grocers are enjoying a good trade, and their stocks are low. The iron and steel mills are not running full time, but nearly all other lines are active. Wheat and corn have advanced heavily and in good time for farmers to profit by the higher prices, as their crops are still in the field. The country is in good shape. We are in the midst of a presidential campaign, but no one seems to be excited about it.



Growing weather throughout the great Central West is now fine. Warm temperature interspersed with light and frequent rains is the rule, and one can almost stand still and hear the crops growing.

Canners should not be afraid of too large an output for every can they will be able to fill will be needed and will be salable at a good price. This, however, does not mean that quality should be sacrificed to quantity, as quality goods will sell well and bring good prices when poor quality goods will be hard to sell and will usually have to be sold at a loss.

All the big dried fruit, nut, raisin, orange, apple and other growers' associations are putting on intensive selling campaigns this fall, and, with National Canned Foods Week, November 8-15, 1924, combined, this United States is preparing to put on the dawgondest, peppiest, pushinest period of promotional publicity in food selling ever heard of.

Say! Mr. Good Fellow! Try to get us one new member between now and September 1st. If he wants to know about the association, tell him the facts presented in the Questions and Answers which you will find as a part of this Review. The arguments are there. Present them to your prospect and get his signature on the dotted line. If you need some application blanks, write us and we will send you some. You will confer a favor on any canner, broker, or supply man by making him a member.

CANNERS!

At this season many important things demand your attention. One of the most important is the necessity of increasing your fire insurance to protect your rapidly increasing values.

The latest improved form of policy issued by

CANNERS EXCHANGE SUBSCRIBERS at WARNER INTER-INSURANCE BUREAU

enables you to do away entirely with the daily checking of your values against your fire insurance, and yet it assures you 100% protection at all times.

From the beginning to the end of the season your fire insurance may be taken care of easily, smoothly, and satisfactorily, with less effort on your part.

You will also share in the usual saving in proportion to the amount of insurance you carry. The saving for 1923 amounted to **$493,252.78**

Crop Reports

By The Canners Themselves.

The condition of canners Crops, in all sections, as reported by the men on the ground. Read how the crops are in your fellow canner's locality, and then return him the favor by sending us your report. A little from each one and the aggrigate will be immensly helpful. Do your part, too. Now.

Huntsville, Ark., August 8, 1924—Tomatoes—The crop will be fairly good if nothing comes to damage it. It will need occasional rains to hold it up.

Preston, Md., August 6, 1924—Tomatoes—Conditions much improved in last three weeks. Vines growing fine and fruiting in fine shape. Needing a shower. Yield, as to the vines, looks O. K. So many vines missing. Acreage about normal, or a littte larger than last year, but so badly broken that the yield will not be over 75 per cent, if that high. We will, with favorable weather, from now on get 60 to 80 per cent of last year's pack; but if early frost, the pack can't be over 50 per cent.

Woodbury, N. J., August 5, 1924—Cherries, sour, pitted, about 75 per cent.

Beets—Large acreage here for this district, but not heavy crop. About an average pack.

String Beans—About an average crop.

Tomatoes—Very late. With a late fall might get from 60 to 75 per cent of a pack. About the usual acreage contracted.

Georgetown, Del., August 5, 1924—Tomatoes—Fair. Looks like about 75 per cent of crop, as compared to last year.

Beans, Green, Stringless—Crop on first and second planting very light. Third planting about 50 per cent of crop.

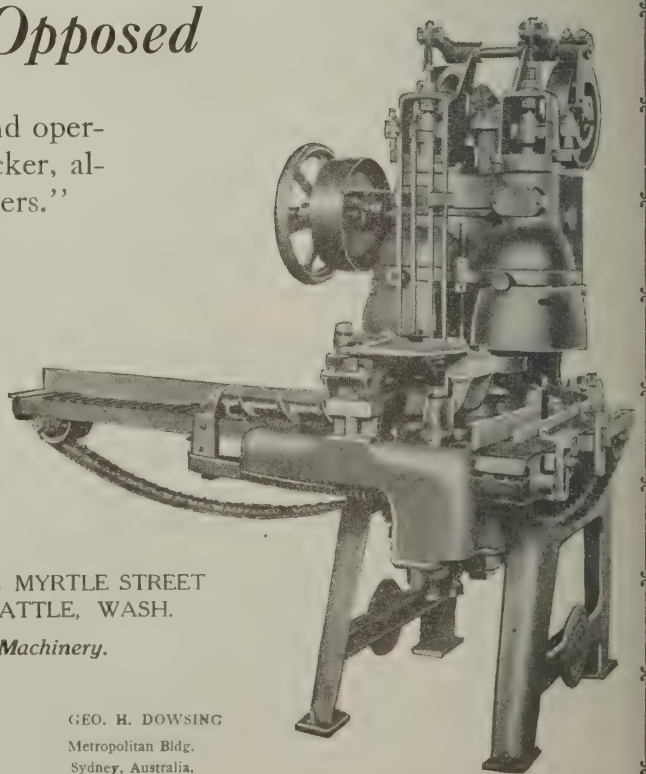
East Williamson, N. Y., August 6, 1924—Peas—Turning out well. A little above normal.

Raspberries—All ripening at once. Weather unfavorable and crop will be short.

Cherries—Now in the height of the pack. Crop about normal. Quality not extra.

Mcntpelier, Ohio, August 2, 1924—Tomatoes—Acreage is up to normal, but on account of the wet and cold spring we have only about 60 per cent of a stand, and are very late at that. Do not expect over 50 per cent of crop at the best.

English, Ind., August 5, 1924—Tomatoes—The crop was planted about two weeks late. The plants look good at present, but are needing rain very badly at this time. Have 300 acres out. Do not anticipate more than a 70 per cent crop, as some were planted entirely too late to get any tomatoes if we have an early frost.



Stringless Beans—The crop of beans is needing rain very badly at the present time. We have 200 acres

Two Rolls Diametrically Opposed

For each Seaming operation. First and Second operations on different Chucks. The second thicker, allowing for a tight rolled seam, with no "cut-overs."

Points of excellence to consider when adding Double Seamer equipment.

HAMACHEK IDEAL VINERS

Hamachek Ideal Viners during the past seven seasons have demonstrated their superiority under all conditions. Their use insures more thorough hulling, on any condition or variety of peas or beans, than is possible with the use of any other viner.

Frank Hamachek **Kewaunee, Wisconsin**

Manufacturer of Viners, Viner Feeders and Chain Adjusters. Machinery Manufacturer Since 1880

out and cannot possibly pack more than 60 per cent pack, as the vines are yellow and practically through bearing.

Elwood, Ind., August 6, 1924—Tomatoes—Acreage 100 per cent. Very poor and late. Setting exceptionally well. Needing rain badly.

Gaston, Ind., August 6, 1924—Tomatoes—Pack in this section all depends upon the weather from now on until middle of October. If we get favorable weather without killing frost until October 15th, we estimate we will have a normal pack, which is the best we can expect.

Streator, Ill., August 6, 1924—Tomatoes—Our crop will be about two weeks late. We believe we will get a 100 per cent pack, as we have more fruit on the vines than usual.

Paxton, Ill., August 7, 1924—Corn—We have approximately 2,400 acres, with an expectancy of 75 to 80 per cent of a normal yield.

Elkhorn, Wis., August 6, 1924—Peas—All finished packing August 1st. Average yield Alaskas, 70 cases per acre. Sweets, 85 cases. Quality average.

Mt. Pleasant, Iowa, August 9, 1924—Sweet Corn—Very late; 65 per cent of a crop. Other damaged by heavy winds, rains and floods.

Wells, Minn., August 8, 1924—We pack only sweet corn, Crosby and Golden Bantam—800 acres this year. Stand good, 10 days late.

Cokato, Minn., August 7, 1924—Sweet Corn—About three weeks late. Yield about 75 per cent. Very dry. We need lots of rain.

Monticello, Iowa, August 5, 1924—Sweet Corn—About 75 per cent of a stand. Two to three weeks late. Will depend entirely upon when we get a killing frost.

Vinton, Iowa, August 6, 1924—Sweet Corn—Acreage 120 per cent, as compared to 1923. Stand 70 per cent, as compared to 1923.

Prospects not good on account damage to stand by worms, wet weather and poor corn-growing weather through season.

Independence, Iowa, August 8, 1924—Sweet Corn—The condition of our crop is very unfavorable. It is about two weeks late, and we have had several severe rain and wind storms the past week, which have done considerable damage. We expect about 70 per cent of a normal crop.

Grinnal, Iowa, August 6, 1924—Sweet Corn—In this vicinity it is two to three weeks late. Stand about 75 per cent. It has made very poor growth, and, with favorable weather conditions from now on, we can only expect 60 per cent of a normal yield. Root lice working on some pieces, especially old ground.

Morristown, Tenn., August 6, 1924—Tomatoes—Acreage normal. Crops looking fine, except a good deal of wilt.

Greenfield, Tenn., August 6, 1924—Tomatoes—About 75 per cent of normal acreage. We have 110 acres contracted, but will get not over 80 per cent. The plants look fair, but all depends on weather conditions from this time on. Too much dry weather would cut it very short.

Beans—Turned out short. We have about 500 cases packed, and it is all over except late beans, which are being planted now.

Tomato prospects over the canning section of West Tennessee and Western Kentucky are what might be termed in fair condition. Some places too much rain, and others too little. I think about 75 per cent normal for the entire section is about correct.

Fordtown, Tenn., August 7, 1924—Tomatoes—Normal condition. We have more acreage than we have had for a number of years, and if conditions still remain favorable, we will have a good pack this year.

Our bean pack will be nothing, as the bean beetle has ruined the crops here.

Fruit is plentiful and a large pack of apples is looked for.

Green Forest, Ark., August 4, 1924—Tomatoes—100 per cent in growing condition, but acreage is about 75 per cent of normal.

HAIL, HAIL, THE GANG'S ALL HERE

The following was taken from an Associated Press Dispatch from Gloversville, N. Y., to The Baltimore Sun of August 11th, 1924:

HAIL FIVE FEET DEEP IN ELECTRICAL STORM

Motorists Forced to Use Shovels to Clear Highways

(By the Associated Press)

Gloversville, N. Y., August 10.—Hail accompanied a severe electrical storm which descended upon this city and vicinity early this afternoon. Near St. Johnsville hail covered highways and fields to a depth of five feet, and motorists were compelled to resort to shovels to make a way through the drifts. At other points it was said hail reached a depth of one foot.

SAUK CITY (WIS.) CANNING CO. GIVES AN OUTING TO ITS EMPLOYEES

THE Sauk City Canning Co. finished packing peas Thursday, July 31st, and the management decided to give their employees, in appreciation of faithful services rendered, a free trip to a number of nearby canning factories, to give them an opportunity to see other factories in operation, as well as observing similar work under somewhat different methods, conditions and environments which may surround a plant of this kind.

Promptly on the 1st of August at 7:15 A. M. the employees to the number of 81 appeared at the company's office, where they were lined up and photographed, after which they boarded two of the Wisconsin Power and Light Co.'s motor busses and five automobiles, which stood in readiness, and at 7:45 the "procession" started off and drove through the main street of Sauk City and Prairie Du Sac, then across the Wisconsin Rover Bridge at Prairie Du Sac to Lodi.

Here the first stop was made, and the canning factory visited of which Dr. Goeres is the manager, who escorted our people through his plant. From Lodi the trip lead through and across a section of very fine

Latest New York State Standards Specify Thorough Washing of Corn

THE New York State Canners Association realizes that the way to increase the consumption of corn is to produce a quality pack. So, when they adopted new standards for canned vegetables, the thorough washing of corn was very definitely specified in their standards for corn. These standards apply not only to fancy quality corn, but to choice and standard grades as well; in fact, to all corn canned in New York State regardless of its grade.

Other states will doubtless adopt similar standards in the course of time. The Peerless Corn Washer is the only machine on the market that will thoroughly wash corn. It has been used for years by a great majority of the packers of real quality corn.

Why not be ahead of the game by installing now the new equipment necessary to thoroughly wash your corn? We still have a few washers for delivery this season.

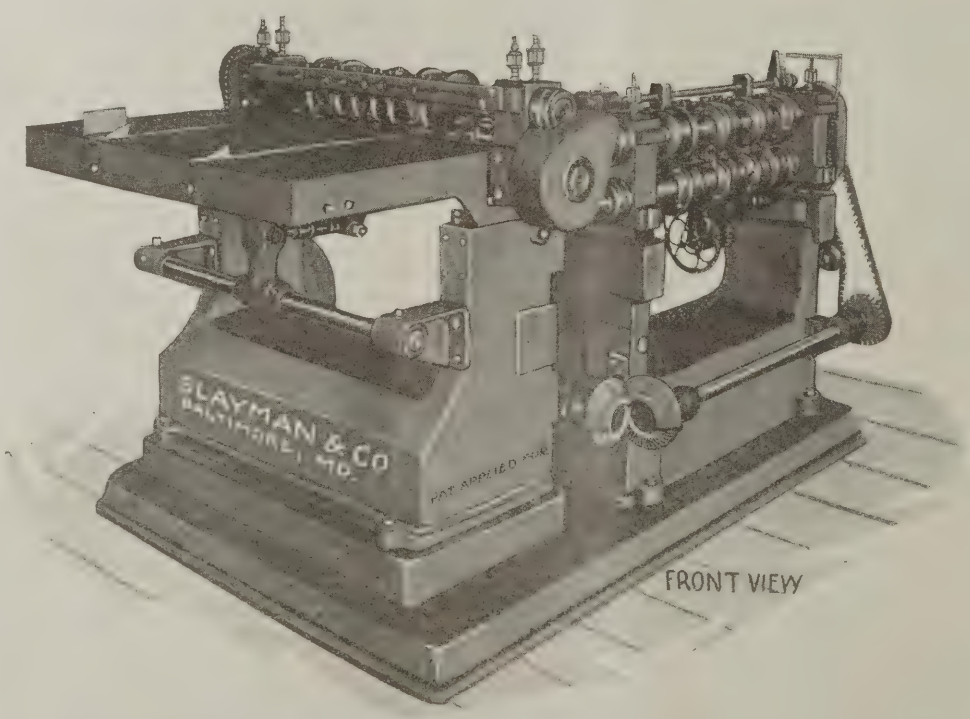
farms, beaming with grand crops of grain and corn until we arrived at Arlington, where a large and modern new plant was just about finishing its first pack of peas. Manager Blank was interviewed, who readily consented to have his plant invaded, much to the enjoyment of the visitors.

The next place visited was DeForest. Here we met the Fuhrmans, and though they were very busy directing the affairs of their plant, yet they found time enough to receive the visitors and show them through their extensive establishment. From here the trip was directed toward Columbus, arriving there about noon, when it was discovered that a trip of this kind not only creates a great deal of enjoyment and pleasure, but that it also develops a raving appetite, and to satisfy the same the Tremont Hotel was taxed to its utmost, for, as stated before, the party consisted of many, and their appetites were great, and all seemed to do justice to the culinary ability and service of the Tremont Hotel.

After dinner the great Columbus pea cannery was visited while same was in full operation. Perhaps most of the visitors had heard of the extensive plant, but only a few had had the opportunity to see the same. Through the courtesy of General Manager Fred Stare, its doors were thrown wide open, to the great joy and satisfaction of all concerned.

The trip was now continued to Sun Prairie, which plant was also in full operation. After obtaining a permit from Manager Agnew, a hurried visit was also made throughout this plant. It was also planned to visit the new factory at Waunakee on this trip; the same, however, had to be abandoned, on account of Trunk Line No. 12 having only recently been tarred, and was not yet in shape for speedy travel; hence, the party decided to take in Madison, especially the State Capitol, and a few other notable places and institutions.



At about 6 P. M. the party left Madison for the home trip over Middleton Cross Plains, Black Earth, Mazomainie, and arrived home about 7 P. M. It is needless to say that this outing was immensely enjoyed by all and each and everybody of the party, including the directors of the local company. Once more we wish to express our sincere gratitude to the managers of the various plants visited for the kind and friendly manner in which they received and showed us through their respective plants, and hope that some day we may have an opportunity to reciprocate the compliments.

SAUK CITY CANNING CO.

THE JAPANESE CANNED CRAB INDUSTRY

THE 1923 production of canned crab in Japan was 137,200 cases of fancy goods and about 40,000 cases of other grades, making a total of 177,200 cases, according to a report to the Department of Commerce from Commercial Attache Babbitt, Tokyo. About 30,000 cases of fancy and 10,000 cases of other grades were destroyed at Yakohama in the earthquake and fire of September. In 1920 there were packed 123,038 cases, in 1921 the production was 120,000 cases, and in 1922 it was 135,000 cases. Only a small proportion is retained for home consumption, the bulk of the exports going to the United States, with Great Britain taking the second largest quantities, and Hawaii,

SLAYSMAN DUPLEX TRIMMER—SLITTER

Trims the sheet absolutely true, and drops it onto the feed bed of the Slitter where it is cut into the desired sizes—2's 3's 10's etc.

THE TWO OPERATIONS —TRIMMING and SLITTING—IN ONE.

Speed 60 to 90 sheets per minute, depending upon the operator. Saves labor, handling, time, and floor space.

Built on rigid base to stand strain. Guaranteed.

CALIFORNIA PACKING CORPORATION

San Francisco CALIFORNIA

France, China and Canada buying smaller amounts. Total imports of crabmeat into the United States have been on the increase. In 1921, 2,500,000 pounds, valued at over $1,000,000, were brought in; the 1922 imports totaled 3,600,000 pounds, valued at $1,700,000, and the 1923 imports rose to 4,500,000 pounds, worth almost $3,000,000. Practically all of this came from Japan and entered through San Francisco and Seattle.

The crab used in the Japanese industry is found in the waters of the Sea of Japan and the Sea of Okhotsk, but principally along the northern and northwestern shores of Hokkaido, the inner shores of Saghalien, the Siberian coast and the inner shores of Kamchatka, and the Kuriles.

The method of catching is by nets of large mesh, with sinkers at the bottom and floats at the top, the net thus being set in a perpendicular position, the crab becoming entangled in the large mesh while ambulating on the sea bottom. No bait is used. The peculiarities of the packing of crabmeat are that it must be done near the place of catch, and soon after the catch is taken into the boats. If kept too long in the boats, a reaction occurs, in which the meat turns color and loses its pure-white, attractive appearance.

Only the legs of the crab are used. The fishermen, if the grounds are within a few hours by boat of the canning factory, take the catch ashore, where fresh water can be obtained, and cook them in boiling water, thus preventing the meat from discoloring, and then take them immediately to the factory for packing. The cooked crab legs assume a red color, much like lobster. The hard shell must be carefully broken and the meat removed whole. The sections of crab legs between the joints are fairly tubular, and this tubular shell is full of solid white meat. A thin film of red on the outside of the meat and clinging to the meat when removed from the shell is left on when packed, as it gives the product an attractive appearance in the tin and shows up well in contrast to the pure white of the meat.

Difficulties of packing make crabmeat an expensive product, as compared with salmon.

The Japanese have fishing concessions in Kamchatka, and there are a number of Japanese canneries on the Kamchatkan Coast; others are located in Hokkaido, Saghalien (Karafuto), Rishiri Island. The canneries in most cases are financed by the exporters, who thus, naturally, secure the fancy goods for foreign marketing. The labeling of the cans is usually done by the exporter at the port of shipment rather than at the cannery. Yokohama was the principal export market for crabmeat before the earthquake disaster, but since that date Kobe has been handling some of the business.

A good deal of the output of the smaller factories is really inferior and some of it is packed under unsanitary conditions. These goods are marketed through jobbers, and frequently exporting firms unfamiliar with the business are tempted to buy them up for export and consequently get into trouble due to their inexperience and their inability to get hold of the fancy goods, which, it is said, is practically all tied up by the people who finance the canneries, and who even go so far as to supervise the work of packing.

Some of the production in the past has been by floating canneries, which anchor handy to fresh water supply in the harbors or bays along the Siberian coast and cook and pack the goods right on the spot.

WHAT THE BROKERS SAY

Milwaukee, Wis., August 7, 1924.

This state was swept with a terrific storm early this week, and it is estimated that the crop damage will reach a million dollars. While general throughout the State, the storm was particularly severe along the eastern part of the State. Field after field of peas were flooded, and all of them were saturated with water to such an extent that farmers have been unable to cut, and as a result there has been but little canning done the last five or six days.

Fortunately 50 per cent of the sweet crop is in the cans, and the loss to the canners will not be as great as if the storm had come a week earlier. As the matter now stands, at least 25 per cent of the sweets still in the ground will be a total loss. Several fields were inspected on Thursday of this week, and we found that vines had already begun to rot from the water.

Corn in all sections of the State was knocked to the ground, but with favorable weather in the future will come back to its own again. We haven't, at this writing, a report as to the damage to the bean crop, but as the storm was not so great in the territories where this commodity is grown, we don't think the damage will be large.

FRANK A. INBUSCH CO.

Indianapolis, Ind., August 9, 1924.

After checking the tomato acreage in the State, we find there will be very few tomatoes packed in Indiana before the last week in August, whereas some canners will not be able to start until 10 days later. All factories are very well booked up, many of them entirely sold up. We do not know of any packers who will take additional standard business at this time. Corn is not improving as hoped for, and some packers fear they are oversold.

BERT C. KEITHLY CO.

Wausau, Wis., August 7, 1924.

There has been a good deal of talk during the past week about standards being sold at $1.00 to $1.05. Don't you believe it; there is nothing to it. We have run down a lot of these rumors, and in every case the peas were either "off-standards," "sub-standards," or the story pure bunk.

No doubt standards have been "offered" at those prices by persons posing as "brokers," who wouldn't knew a can of standard peas if they met one on the street, who have no more accounts than a rabbit. These birds make a practice of offering goods that don't exist at about a dime under the market. If they get an "order" they peddle it from hell to breakfast among the canners, giving them a thousand reasons why they should confirm. Once in a while some poor simp will fall for this stuff —more often not. Then they report back to their buyer that the goods were sold elsewhere.

There is no appreciable surplus of standard 4 Alaskas. It would not be surprising to see an acute shortage long before another pack will be available. The price today is $1.10. Some of the better lots are selling at $1.15. Standard No. 5 Alaskas are obtainable in limited quantities at $1 00—some exceptionally nice lots are held at $1.05. Standard No. 5 sweets are selling at $1.10, sixes at $1.05. No full standards can be bought for less.

The Markets

BALTIMORE, AUGUST 18, 1924

WEEKLY REVIEW

The Pea Situation in Detail—Big Pack, but There Will Be Little or No Surplus—Tomato and Corn Canning Begins—Market Weak on Early Packed Tomatoes—Fruits Are Strong and in Demand.

THE PEA COMPLEX—A year ago, when the pea-packing season had ended, everyone predicted—and it was expected—that the 1924 pea plantings and packs would be a record-breaker. The seedsmen merely had to sit still and let the canners bid their heads off for all and every kind of pea seed. And they did just that. And they went out among the growers, and each one quietly and "unbeknown" to every other pea canner, contracted for larger acreages than they would have dreamed of a few years ago. And then planting time came, and with it reports that the seed could not be gotten into the ground, owing to the cold, backward, unfavorable spring. But somehow in some way they did manage to get a pretty good acreage out—and then the yield would not be good, it was said. But the yield was pretty good, too. And so it is not surprising that the pea pack of 1924 is a good one; nor can we consider it at all astonishing that the good results were magnified by some parties in view of the preceding. The canners are still too much farmers to realize that the strongest feature of a market is truth, and the whole truth. We refer to the body of canners and not to individuals, as there are many, many canners who lay their cards on the table face up, as they should, and so let their distributors know just what to expect. There is no reason in the world to use subterfuge regarding peas, especially. The big expected pack was sold as futures, and they have advanced the general standards of peas to such a point that any surplus is needed, the consumers wanting all the peas that can be packed. There has come no trouble to the pea market due to the misleading reports, except a momentary drop in standard prices and which is of small consequence, but the effect upon the other items of canned foods has been harmful. Boldly speaking, the buyers say that if the pea canners, who are the leading members of this industry, will attempt to fool them, what can be expected of the tomato canners, and the corn canners, etc.? The tomato market, in particular, is suffering right now, the buyers saying that they suppose the tomato pack will be a record, too; that you cannot believe those d—m, lying canners, their trade journals or anyone connected with them. That is unfortunate and is a very prominent market feature today.

It is unfortunate because it misleads these buyers regarding tomatoes where crop conditions—and corn, too—are actually very bad. The Fall would have to extend to November to allow the canners of corn and tomatoes to come through with anything like a normal output, and it is extremely doubtful if that result would be obtained even with a late Fall. Therefore, if the buyers go away from corn and tomatoes in a huff and decide to wait before covering their wants, and the packs prove to be small, as they now seem certain to be, these buyers will again feel hurt, and they will feel that they have again been imposed upon. This kind of a situation does not help the market, but, of course, it is "the way of the trader."

Speaking of the recent disaster to peas in Wisconsin, Frank Stare, of the Grocers' Supply Co., said under date of August 12th:

> "The past week has been by far the most disastrous to the 1924 pea pack of any since the seed went into the ground. Commencing Sunday, August 3, torrential rains extending over Monday and Tuesday, in the very heart of the down-State canning section, literally devastated thousands of acres of peas, ready for the can, and made it impossible to harvest and deliver to the factories other thousands of acres before the peas passed the canning stage. Two hundred bridges were washed out in this area. Any number of factories never turned a wheel after this storm; they were simply put out of business. Then came the cyclone in the western part of the State, which wrecked one canning factory, and absolutely wiped out hundreds of acres of peas belonging to other canners in the track of this storm. As a result of all this the pack in Wisconsin has, doubtless, been curtailed a million cases.
>
> "Don't get the idea that there is going to be any immediate shortage of peas. There will be enough, although none too many, to meet the increasing consumptive demand. And the losses of the past week eliminates the possibility of carrying any surplus into the 1925 pack. Fancy Alaska peas are scarce right now, and standard Alasgas will be very soon.
>
> "Canners who were short on standard Alaskas—and there are a lot of them—are buying standard No. 4s at $1.10 in large quantities. By the time they get through there will be very few left. It looks like a stronger market on standard Alaskas, until they are cleaned up."

Confidential information from others in that State bear out this report, and the market may accept it as a true version of conditions today. The pea market here shows no changes in prices, and as most buyers are now receiving, or have received, good supplies of their future peas, the demand is quiet.

TOMATOES—The tomato canning season is on, the beginning having been made here with the early Jersey tomatoes, but which are very much lighter in supply than usual. These early packings will "cut a very small figure" this season. Other growers of tomatoes are beginning to make light pickings, and the season opened with a few houses the last days of this week. Indiana, Illinois and some other sections are beginning in a small way. The main crop will not be ready until September and they are all hoping and praying that it will be a long season. However, the weather is not such as to make that seem a possibility. We have had torrential rains during the past week in

most tomato sections, not only in this Tri-States region, but in Indiana and the Central West generally. And the extreme heat of the past few weeks has been replaced by much cooler weather, denoting the change to cooler times. Need we repeat the old bromide that torrential rains now will cut the yields of late tomatoes? They knock the blossoms from the vines, and beat off the small fruit; in fact, are the one dreaded enemy of a good tomato yield.

This week's tomato prices are weaker. No. 2 tomatoes in Baltimore are quoted at $1.05 as against $1.15 before. That means for the spot early packed Jersey tomatoes, and need not apply to the country canners and their seasonal crops. The wise buyer will observe that the tomato canners, as a whole, are staying off the market with further futures, will not consider them, and he should see in this a remarkable strength and indication as to the actual crop condition and prospect.

Corn—The crop has made excellent progress during the past few weeks. but some of the western sections have suffered from hail and severe storms. It is known that the severe storms have done more good to the growing crop than harm, with the exception, of course, of those unfortunate individuals who were caught, as some are always caught. The corn canners are also tuning up their machinery and beginning in a small way, and that season, now badly delayed, will be in full swing next week. As with tomatoes, the corn canners cannot see the possibility of accepting more business in face of crop conditions. The corn market remains unchanged and is very firm in price in all sections and all markets.

FRUITS—The buyers have fully awakened to the fact that fruit packing this season is to be "on orders in hand," or in other words, that there is small chance for any surplus in canned fruits this season. For this reason the market is very firm and active.

Pumpkin, which seems to be entirely cleaned up as to spots, is reported in very bad crop condition. Canners should watch their future sales and take advantage of their opportunity.

NEW YORK MARKET

Business Fair—Usual End of Season Weakness in Tomatoes—Southern Corn Held Higher Than Western—Peas Are Easy—Canned Foods Week Plans—Fruits Cause Anxiety—Salmon Pack in Question—News Notes.

By "New York Stater,"
Special Correspondent "The Canning Trade."

BUSINESS FAIR—There was no real change in the spot canned foods situation noted during the past week. Buyers were operating locally only in a small way. With delivery time for new packs close at hand, and prices on spot goods considerably higher than new pack, in most instances, buyers prefer to pick up small lots as needed to carry them until their first shipments of the new pack come along.

Tomatoes—With the new tomato season merging with the old, there has been the usual end of the season weakening in prices for old pack. Standard No. 2 tomatoes of 1923 pack are now available for prompt shipment at $1.00 to $1.05 per dozen, f. o. b. cannery, while new packed are offered for prompt shipment at the same range. Explaining these offerings of new pack for prompt shipment, one factor advises: "There is each year a quantity of early tomatoes planted for the city markets; the surplus is canned. A few of our packers are working on this stock. The quality is not equal to the later, or main, Maryland and Delaware crop, which will start about September 1st." Some future tomatoes are being quoted out by canners at 60c for 1s, 90c for 2s, $1.35 for 3s, and $4.25 for 10s, f. o. b. cannery.

Corn—Midwestern canners are quoting new pack for later shipment at 95c to $1.00 per dozen, f. o. b., for standard quality. Southern packers are offering at 95c per dozen, f. o. b. cannery. Why the Southern packers are generally 5c per dozen under the Midwestern canners on standard corn is a mystery, as the Southern pack is generally more pleasing to the palate than the average Midwestern standard. The answer probably lies in the fact that the canners in the Midwest co-operate more thoroughly through their close trade organization, and, consequently, are not menaced by the fear of some neighboring canner cutting prices and so spoiling the market for all.

Peas—The market is rather easy, reflecting recent report of the size of the pack in Wisconsin, which is running much larger than had been anticipated. Considerable storm damage was reported done to the growing crop of sweets by severe rain storms, however, and as a result the canners have withdrawn some of the low prices which were heard around the market last week. Spot holdings of peas are not large, and Southern packs of standards are finding their way onto the shelves of local retailers in larger volume than usual.

Canned Foods Week—Plans for Canned Foods Week are already being discussed with interest in the trade here, and it is evident that there will be more support of the plan in New York this season than has been the case hitherto. Definite plans for the conducting of the campaign locally have not yet been announced.

Fruits—Depressing reports regarding the progress of the California fruit pack are being received, but many buyers continue to discount these reports, and appear confident that there will be enough fruit to go around at prices which they think will pay. It is reported that the yield of pears and peaches in particular has been light.

Northwest Berries—Reports of pro-rata deliveries on Northwest packed berries are being received, and the market is stiffening somewhat on the scarcer lines. There has been a good demand for Northwestern Bartlett pears, both by the domestic trade and for shipment abroad.

Asparagus—While canners are quoting steady at list prices on their surplus stocks of asparagus, it appears that there are fairly sizable holdings of the lower grades in California, and prices are showing a downward tendency. Prices on asparagus have risen so during the past few years that the choicer grades have been placed in the luxury class, and wholesale grocers have been buying only in a limited manner.

Salmon—First vessels of the Alaska salmon fleet have started downward. It is interesting to note the disparity of reports regarding the pack, as circulated in the food trade and in financial circles. Reports in the trade are to the effect that the packs have been light; very much below expectations. Yet a leading financial news service yesterday carried a report from San Francisco telling of the sailing south of the first two vessels from Alaska waters, and adding that operations have been most satisfactory this year, so satisfactory, in fact, that the entire fleet will return loaded with either cased salmon or frozen and salted salmon. As to prices, chums are available in quantity for coast shipment at $1.20 per dozen, with reds available at $2.25 to $2.30, f. o. b. Seattle, although packers are talking $2.35 for this grade.

Sardines—Buyers continue to hold off the market for Maine sardines, and the base price of $3.75 per case for quarter keyless oils, f. o. b. Eastport, remains unchanged. Buyers are attempting to force the market to a lower level, but have met with no success thus far.

Raspberries Higher—Michigan canners have advanced No. 10 black raspberries to $8.50 per dozen, f. o. b. cannery, as compared with the previously prevailing quotation of $7.75 per dozen. Buyers have been taking Michigan berries in increasing quantities during the past few years, and the pack of the Wolverine State has become very popular with the pie fruit trade. Michigan cherries, strawberries and blackberries have met with a good demand this year, and the peach and pear packs have also sold well.

Tuna—Most tuna packers continue prices withdrawn, the strike of the fishermen having tied up cannery operations to a great extent. The canners are not so broken up over the strike as would be the case during a normal season, as the tie-up came just at a time when prices had started to tumble, with competing packers cutting quotations materially in the scramble for business.

Succotash—Carryover stocks of 1924 pack succotash are practically nil and it is evident that the supply this season will be short. Maryland packers are reported to be entirely sold out of all qualities of succotash, but will probably have stocks of new pack to offer in the near future.

Stringless Beans—There has been an active call for Maryland pack stringless beans during the past week, and canners are holding the market firm at $1 05 per dozen, f. o. b. Baltimore, with some country canners offering at 5 cents per dozen under this figure. No. 10 standards are held unchanged at $5.25 per dozen, f. o. b. cannery.

New Sweet Potatoes—Offerings of No. 2 standard sweet potatoes, f. o. b. cannery, were reported this week, after the market had been bare of this popular item for many weeks. Sweets did not take with the New York trade when first introduced. The New York trade buys with its eyes rather than with its tongue to a great extent, and the first canned sweets put on the market here were the delicious and palatable, but nevertheless unattractive, Southern yams. Since the canners have been devoting more attention to the appearance of their pack, however, the demand has picked up, and canned sweets are a regular staple with many New York stores now.

Notes—The Beechnut Packing Co. has declared the regular quarterly dividend of 60 cents per share on the common and 1¾ per cent on the preferred Class B stock, payable October 10 to stock of record October 1 on the common and October 15 to stock of record October 1 on the preferred.

Lestrade Bros. have been appointed New York sales agents for McGovern & McGovern, Seattle salmon factors.

ST. LOUIS MARKET

Market Continues Firm—Buyers Expect Larger Packs Than Estimated—Doubting Crop Conditions as Reported—Uncertainty Rules—Canners Hold Firm—Fruits Are Very Strong.

St. Louis, August 13, 1924.

By "Missourian."

Special Correspondent "The Canning Trade."

A FIRM market for all canned foods continues here, this in spite of a lack of forward purchasing. Buyers have refused to be rushed into making contracts at canners' prices. They believe that packers will have more of an unsold surplus after they have finished their pack than they expected, because they will pack more than they say they will. It is also the opinion of distributors here that the packers have not sold in actual form orders as much as they give out. At any rate, local trade is not believing the conditions in packing centers is as bad as is reported, and while distributors are inclined to buy in advance, cheaper lines than those now quoted are wanted, and since they cannot be had, buying at full price is being done in conservative volume only.

Tomatoes—Distributors refuse to accept the tomato market as it now is at the stiff prices prevailing, and canners do not see how there can be a normal pack, and until packing is in full swing, it is not anticipated there will be much market change. The demand for old packs is to cover actual orders now on hand. As it is, there is too much uncertainty to attract much buying, and purchasing, therefore, is on a hand-to-mouth basis. A belief prevails here that a late season may take place, and it will give plants an opportunity to overcome the unfavorable spring and the packs will be heavier than at first believed. In the South the situation appears serious. No one can tell, however. Much depends on the weather. If frosts are late, canners may be able to do better than they thought. Anyway, the canners do not believe there will be a heavy pack in the Tri-States.

Corn—None of the corn canners care to book orders for more new standards or extra standards. The late crop, lack of rain, and other handicaps do not encourage selling what cannot be produced. Canners say corn needs plenty of warm weather. The unsettled outlook has caused many withdrawals of new pack in all grades. In consequence, the light carryover mostly in second hands is carried with confidence. Futures are not readily available, as there are few offers being made.

Peas—Peas have been heavily sold on contract, and Alaska grades are sure to be shorter, but sweets may be sufficient to meet the shortage and leave a surplus. Since sweets are the most popular seller of the two, a condition of that kind will meet with favor among buyers. Supplies were bought early in the West. Reports have it that Wisconsin will have about 10,000,000 cases, which is a large pack as to total, but it is said that there will be a serious shortage of the large sieves. The surplus, it is said, will be in extra standards and near fancy, but fancy will be hard to get. It is said, also, that in some sections the yield has been three to six loads to the acre, on comparison to three or normal, due to heavy vineage. This has swamped packers who have not been able to take care of the peas offered them.

Fruits—The California fruit situation is a surprise. Many canners have withdrawn. Others are for the time being off the market until they can check up their outputs and find out the costs, while a few who are open to business are quoting only the ordinarily slow sellers, which are never in popular demand. Pears, peaches—of the favored grades and varieties—apricots and other items are more or less unavailable at the source. What is particularly noticeable is that all canners have the same selling ideas, and even the smaller factors, who are usually willing to undersell the larger packers, are now cautious sellers. California and Northwest reports indicate a limited production and next to no surplus after filling contracts. A considerable volume of European business is said to have been booked. Outlets abroad have been depleted of carryovers, which broadens the distribution of the new crop.

The Missouri State Board of Agriculture in a report just issued states that summer fruit prospects are fair, apples 56 per cent of normal, indicating a smaller commercial crop than last year. Some pears, plums and apples were hurt by winds and hail. Many farm apples are wormy. Howell county has a good peach crop. Peaches are very scarce north of Springfield.

The International Apple Shippers' Association is holding its twenty-ninth annual convention in St. Louis at the Hotel Chase this week. It was the largest meeting ever held by the organization, 1,500 delegates being in attendance.

The first day was taken up with registrations and committee meetings. At the formal opening Mayor Kiel delivered an address of welcome, and President J. J. Castellini, of Cincinnati, spoke.

A report of the 1924 crop was received and plans formulated for its distribution. The subject of discussion was publicity, including plans for a National Apple Week, legislation, transportation charges on freight, express and ocean shipments, refrigeration in transit, pre-cooled shipments, trade welfare, etc.

CALIFORNIA MARKET

Heavy Business on Fruits—Most Canners Sold to Their Limit—Realization That Prices Would Not Be Lower Caused a Rush—Pineapple Selling Well—A Large Pack of Tomatoes Not Expected—Salmon Pack Said to Be but 65%—Coast Notes.

San Francisco, August 14, 1924.

By "Berkeley,"

Special Correspondent "The Canning Trade."

FRUIT BUSINESS GOOD—A very heavy business has been booked on California canned fruits of late, and many packers have disposed of about all they care to. Several of the leading operators have made two general advances in prices since the opening of the market, and there is very little cutting of prices, even on the part of very small packers. The jobbing trade came to the realization some time ago that lower prices were out of the question and that advances were in order. It began to place orders quietly, but within a short time there was a real rush to anticipate future requirements, and this has definitely depleted stocks in many lines. The new lists of the California Packing Corporation and other large concerns are marked by many withdrawals, and these will be more numerous within a short time. Crops are not turning out as well as was expected, owing to the drought, and the pack of some varieties is falling below early estimates. Prominent packers prophesy a complete cleanup of California fruits this year, with other advances in the general list from time to time.

Pears—Despite the comparatively high prices quoted on Bartlett pears this year, prices made necessary by the high cost of canning fruit, the estimated pack of pears has already been largely absorbed. The California Packing Corporation has withdrawn prices on its entire list, with the exception of No. 10 solid pack pie, and will not be in the market again unless a surplus develops in some grades over the expected output. Other con-

Pineapple—A very marked demand continues for Hawaiian cerns are making but limited offerings.
pineapple and most packers have made advances over opening rates. These are not as large as on some lines of California fruits, but serve to emphasize the firm situation in the canned fruit field. The demand for crushed pineapple continues to be an interesting feature of the business and the outlook is that the

pack of this will fall considerably short of the demand that has been created.

Tomatoes—The outlook for a large pack of tomatoes in California this season is not very promising, the drought having brought about poor crop conditions in many sections. Most of the expected pack has already been disposed of, with $1.15 for No.2½ standards about the average price. Some large operators have withdrawn offerings entirely, but others are still offering small lots. Very little additional business will be booked, however, until the packing season is well under way.

The pack of fruits in the southern part of the State will be light this year, the output of peaches being estimated at but about 20 per cent of that of 1922. Apricots proved a light crop, with the fruit running to small sizes. The drought in the southern part of the State has had a very marked effect on deciduous fruits of all kinds. Many canneries are not being operated this season.

Salmon—Advices from Alaska indicate that the pack of salmon on Bristol Bay, from which the finest red fish is secured, will be but about 65 per cent of that of last year. Opening prices have not been announced by the Alaska Packers' Association, and none are expected until about the end of August, when the size of the pack will be definitely known and the first vessels of the fleet will be in port. Some packers have withdrawn prices on spot salmon, and the market is much firmer than it has been.

Coast Notes—The Oakdale section of California, long famous for its production of canning peas, is becoming well known as a producer of cucumbers for canning purposes. The output of cucumbers this season will be larger than ever before.

Dates for reduced rates on canned foods from Pacific Coast ports to the Gulf of Mexico have been altered from the original schedule, and will go into effect sooner than was at first announced. The Swayne & Hoyt Co. has announced that lower rates will be in effect on vessels of its line from San Francisco and Los Angeles on August 16, instead of on September 1.

J. F. Niswander, for several years president of the California Peach and Fig Growers, Inc., which has headquarters at Fresno, has tendered his resignation and has been succeeded in this capacity by W. B. Minturn, formerly vice-president. This organization has taken an active part in the introduction of figs to the consuming trade, as well as in the handling of dried peaches.

W. N. Rolph, vice-president of the Griffith-Durney Co., San Francisco, has returned from an European trip made in company with Mrs. Rolph.

Tillman & Bendel, San Francisco, have given up their wholesale distributing branch maintained for a time at Fresno, Cal., and are again serving the San Joaquin Valley trade direct from their San Francisco headquarters.

Suit has been filed at Stockton, Cal., against the stockholders of the Manteca Packing Co. by William H. Stitt, acting as assignee for numerous creditors of this concern, which has failed. The debts were contracted during the past two years.

P. C. Drescher, president of the Mebius & Drescher Co., Sacramento, Cal., and well known in wholesale grocery circles throughout the country, has purchased the interests of Henry Mitau, vice-president of this firm.

MAINE MARKET

Rain Does Much Good—At Work on Beans and Blueberries—Berries Will Be Short—Corn Crop Looks Promising—The Sardine Situation Is Discouraging.

Portland, Me., August 15, 1924.

By "Maine,"
Special Correspondent "The Canning Trade."

GOOD RAIN—A nice rain this week has brightened the outlook here in Maine. While the Weather Bureau reports only .45 inches, it was a soft, gentle rain, which soaked into the ground and did great good to the suffering crops. Some spots of the State had been favored with occasional showers and were in good condition, but other sections were extremely dry and the prospects for a good harvest were very discouraging.

At Work—Work has begun in the Maine canning factories this week on stringless beans and blueberries. The bean crop withstood the dry weather surprisingly well, and while the beans are not as good size as last year, nor quite as free yielding, the pack is going to be much better than we had reason a few weeks ago to expect. A few factories opened up the week of the 4th, others this week, and now all are busily engaged.

Blueberries have suffered rather more from the lack of moisture and the pack will be under 75 per cent of normal. Prices have finally been announced this week at $2.00 and $9.00 for 2s and 10s in water, with a differential of 25c on 2s when in syrup. These prices are being firmly maintained, and will be upheld; it is anticipated that the market will be cleaned up very shortly, as the S. A. P. business is already more than sufficient to consume the estimated production. Had yesterday's rain been a pelting shower, the berry crop would have been still further reduced, as the bushes are dry and a heavy rain beats the berries to the ground.

Corn—The corn acreage was very much benefited by the rain, which was general throughout the State. This help came just in time, and as it has been followed by warm, sunny weather, it has done a world of good to the corn. Conditions are reported as being, if anything, better than last year at this time, and the outlook is promising.

Sardines—The sardine situation continues very discouraging from every point of view. No fish are expected until the last of August, although it is hoped that the run at that time may be heavy. The catch along the coast from Jonesport to Rockland, which generally furnishes the bulk of the fish, has not been 10 per cent of the usual amount. The pack is, consequently, very slow, and necessarily expensive to operate. In fact, the present selling price of standards, $3.65, is said by good canners to be the actual cost of production in the factories. Goods are moving to market as soon as produced. The sardine canners, however, have had so many losing years now that they are inured to grief and are struggling along bravely against all odds.

WHAT THE BROKERS SAY

Aberdeen, Md., August 13, 1924.

Tomatoes—The packing of the new early Jersey crop of tomatoes commenced last week, and will continue for possibly a week or 10 days longer, when there will be a little lull until the regular packing season begins from the acreage under contract. These early pack tomatoes, as a rule, are not as good color as the later varieties. There is still a little surplus of last year's pack tomatoes available for immediate shipment at 60-62½c for 1s, $1.00-1.05 for 2s, $1.35 for 3s, and $4.25 for 10s. We can also buy new early pack 2s at $1 00-$1.05. For future delivery for shipment during the regular packing season the market is somewhat firmer and there are very few sellers. We are quoting future tomatoes at 60-62½c for 1s, 92½-95c for 2s, $1.32½-$1.35 for 3s, and $4.25 for 10s. The prospects for a crop of tomatoes are rather unfavorable at this time, and it all depends on the weather conditions as to the size of the pack.

Corn—Spot corn seems to be pretty well cleaned up. We are entirely sold out of crushed sugar corn, but have about a car of extra standard whole-grain shoepeg corn under packer's labels at $1.35 per dozen, f. o. b. Delaware factory. Prices on future corn have been temporarily withdrawn, as sales have been rather heavy and packers prefer to wait until they get into the packing season and see how the corn is turning out before taking any additional business.

Sweet Potatoes—We offer new pack sweet potatoes for shipment when packed, strictly standard quality, at $1.20 for 2½s, $1.25 for 3s, and $4.25 for 10s, f. o. b. factory.

Fruits—We quote No. 2 blackberries in water at $1.25, 10s at $7.25, No. 2 strawberries in water at $1.40, 10s at $5.75; No. 2 red cherries in water at $1.40; No. 2 gooseberries at $1.35; No. 2 syrup pears at $1.15, 3s at $1.70; No. 3 water pears at $1.00-$1.05, all f. o. b. Baltimore.

C. W. BAKER & SONS.

THE LAND OF OPPORTUNITY

From the Optimist

WHEN Dumas wrote the "Count of Monte Cristo" he wished to endow his hero with unexampled riches—wealth beyond the dreams of avarice—so he put his fortune at one hundred million francs, or twenty million dollars. That was as far as imagination could go in that day and generation; and it is probably as far as it can go today in almost any country other than the United States.

Opportunities for the creation of great fortunes do not seem to occur often outside of our borders, but the industrial history of the United States can reveal stories that would make Monte Cristo tame by comparison. No Arabian Night's tale ever conceived by man can compare with the actualities of American business.

The story of Carnegie; of Huntington, Hill and Harriman; of Mackay, Fair and O'Brien; of the fabulous fortunes of Standard Oil—any or all of these would make a resurrected Dumas drop dead again. But of all the classic examples of golden opportunity and the possibilities of applied industry in America, the history of the Ford Motor Company is the top.

The other day we ran across a list of its original stockholders, with the amount of stock subscribed by each. The figures are said to be approximately correct, and perhaps they will interest you as much as they did the Editor:

Henry Ford	$25,000
Alex. Y. Malcolmson	25,500
John S. Gray	10,500
John F. Dodge	5,000
Horace E. Dodge	5,000
Horace H. Rackham	5,000
Albert Strelow	5,000
John W. Anderson	5,000
C. H. Bennett	5,000
V. C. Frey	5,000
James Couzens	2,400
C. J. Woodhall	1,000
Miss R. V. Couzens	100

Of this sum only $28,000 was paid in cash.

Ford put in his car for stock and let Malcolmson have $25,500 worth of stock for guaranteeing $7,000 worth of bills. The Dodges paid no cash, but agreed to furnish materials for the amount of their stock. Most of the others put up notes, in whole or in part.

Strelow sold out for $25,000 to Couzens in order to invest in a gold mine in British Columbia. Had he stuck his stock today could be sold for $50,000,000. The gold mine was a failure.

Malcolmson sold to Ford for $175,000. His stock, it is estimated, would today be worth $250,000,000.

Bennett, Woodhall and Frey sold out soon after Malcolmson. Bennett and Frey each received $25,000 for their stock from Ford and Couzens. Ford bought Woodhall's stock for $5,000.

Miss R. V. Couzens, sister of James Couzens, took out $355,000 from her investment of $100.

James Couzens took out $39,500,000.

The Gray estate sold its stock for $26,250,000 after drawing dividends of $10,355,075.

The investment of Rackham and Anderson, attorneys, yielded each of them $17,435,750.

The Dodge brothers took out a total of $34,871,500.

The Ford Motor Company has made over ten million motor cars. There are, in all the world, seventeen million automobiles.

What Canned Foods Distributors are Doing

New Organization Plans Cooperative Buying By Retail Grocers on Large Scale— "Big Stick" For Manufacturers Accused of Favoring Chain Stores— Turnover and Profits.

War Against Advertising—Independent retail grocers have declared war against certain manufacturers of national advertised products. For several years past the feature sales of certain nationally advertised food products by chain stores at prices at or under those at which the independent retailers could buy have acted as a thorn in the side of the independent retailers. Some manufacturers have been charged with giving the chain stores preferential prices and discounts, and the plans for the independents call for a drive for equal rights in buying. To this end, the co-operative buying exchange idea of the retailers is being developed.

John H. Meyer, president of the Associated Grocers of America, a new organization of retailers, which will strive to so organize the retailers of the country that they may be put upon an equal basis with the chains in buying, outlined the retailers' plans at the recent grocers' convention at Buffalo.

"It was evident," said Mr. Meyer, in speaking of the causes leading up to the formation of the new organization, "that the conditions governing the sales policies of some manufacturers and jobbing houses were quite at variance with those generally applying to those not within 'the charmed circle' of the favored, and certain experiences were quoted which practically proved buying concessions and other devious allowances, beyond the shadow of a doubt. In fact, written evidence was offered in proof of it.

"With this before us, it was no longer a mystery as to how certain dealers could afford to sell some nationally advertised products continually at a price to the consumer below that at which the individual grocer could buy. In substantiation of this, the evidence of certain dealers continually advertising certain nationally advertised staples at a price which was below that at which we could, also pointed the way not only to the positive evidence we had, but the circumstantial as well.

"The time for the intelligent retail grocer to think in big terms is now, for we believe that his underrating himself has kept him from reaching the plane he is justly entitled to. With such an important industry as ours we should not stand idly by and permit those who would run the steam roller over us to get away with it while we are conscious.

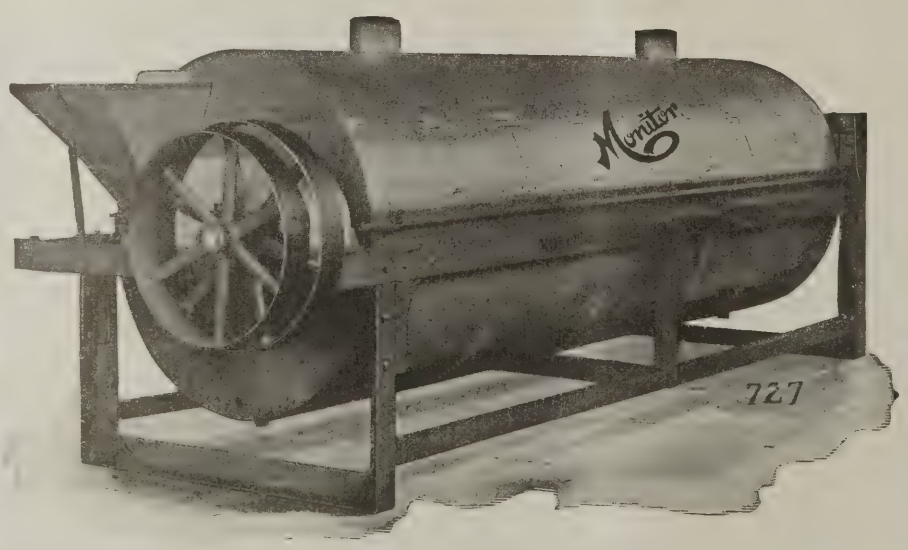
"Some comment has been heard that our jobbing grocers are frowning upon this new move, and yet we fail to understand why this is so, especially when we are told that even they are contemplating combining their purchases in order that they may better meet the same common foe against which we are aiming. It is erroneously claimed by those who profess to know our plans that we seek to buy collectively for all of those who have allied themselves within our ranks. This is but part truth, since we confess that at the present time at least this is physically impossible. We do know that the policy as laid down by us will, in time, develop an understanding such as will leave no doubt in the minds of those who are discriminating against us and will awaken them to the fact that this is unfair trading. They can no longer expect us to continue to be forced to sell their products without a fair return to us, while others more favored evidently find it a paying proposition.

"The grocer has beeen stuffed with the matter of 'turnover,' most of which is just that and nothing more, not even paying the overhead expense of doing business. So in place of listening to the glib specialty artist on the wonderful business of 'turnover,' we think it is time to 'turn about' and do a few handsprings of our own creation.

"The old-time 'regular' jobber should not feel hurt at this move, since the basic principle governing it is but the natural outcome of what any of the 'regular' jobbers could expect. We have never claimed that we will get all of the grocers into our activities, but we do find that there are sufficient of them to

justify our going ahead along progressive lines. Some jobbers have accepted the situation as gracefully as conditions will permit, and they are sufficiently intelligent to know that frowning won't stop us. There will still be retail grocers who prefer to continue less progressively than their neighbor, and perhaps feel happy. It is quite evident that there are some jobbers as well as manufacturers who have been just as careless as are the reta lers in not shaing their policies along new lines, and are growing indifferent to the real things surrounding them. Some jobbers and manufacturers have 'fallen' for the quantity allurement, only to become enmeshed in the web, from which it is hard to emerge gracefully. If one wants a striking example of this, let him read some of the advertisements of the 'big fellows' where we find nationally advertised staples offered at a cut price often lower than we pay, and right on the same line we find the dead.y parallel and silent stab of 'why pay more' for their own brands offered at a price below that of the cut price referred to. At times these comparisons show a differential on the same size as much as 10 cents. They 'rub it in' by duplicating it in their show windows, thus giving even those who can't read a chance to compare by size and at least figures.

"The theory of co-operative buying is history—it has proved its necessity and value to the intelligent dealer. Even the 'large' buyers buy co-operatively, which indicates as well as proves that its future depends upon the practical application of intelligent and forceful support of those interested. The good will of the dealer, especially the individual type, which some manufacturers appear to have overlooked in the mad scramble to get the big business will continue to be a big factor, as it always has been. When sales policies are introduced only by fear of losing the trade on other articles, and the manufacturer depends almost entirely on the consumer being catered to by advertising costing immense expenditures of money—when turnover is attempted to be made compulsory, regardless of these conditions—then it is not to be wondered at that the retailer rebels.



"Some manufacturers carry their trade-marks on their balance sheets as assets in sums varying from small amounts to millions of dollars. It has taken them many years and great cost to justify it. Some of the highest courts have held that such an asset is perfectly legitimate and that 'good will' often becomes the basis of money consideration in large transactions. With this point firmly established, is it unfair for us to assume that the manufacturer owes a duty to himself to see to it that his trade-marked product, with its contents representing only a small part of the value of the product as a whole, should be protected accordingly?

"The manufacturer has the law in his hands if he will but realize how dangerous such a policy is. We are keeping in mind recent court decisions as to how far a manufacturer can go in refusing to sell his product or to attempt to maintain a resale price. What we have in mind is that some manufacturers coddle these dealers, actually encourage them to not only sell to the consumer at ruinous prices, but actually assist them by making an allowance; first for the cost of advertising the cut price in the daily papers and giving various devious concessions, either direct price allowances, secret rebates, yearly deductions for increased sales, shelf advertising, 'thirteen for a dozen,' and various other schemes."

Turnover and Profits—E. A. Carter, secretary of the Alabama Wholesale Grocers' Association, writing on turnover and profits, says: "Instead of saving a lot of money on our expenses by rapid turnover, the expense account is only affected at the most about 1 per cent, but turnover increases gross profit percentage by eliminating losses, minimizes close-outs, and does away with the temptation to cut prices on account of large stock and does not leave the wholesale grocer a victim of market conditions which invariably work against him. This increase in gross profits, if turnover is properly handled, instead of saving 1 per cent of your expense account, will amount to 1½ per cent on your sales."

Fair and Unfair Practices—A petition for a review of the principles of law involved in the Federal Trade Commission vs. National Biscuit Company case has been filed in the United States Supreme Court. The petition seeks a review of the decision of the United States Circuit Court of Appeals for the Second District of New York, which was rendered May 5 last, overruling the cease and desist order which had been entered by the Federal Trade Commission against the National Biscuit Company. The decision of the Court of Appeals, which the Federal Trade Commission now seeks to have set aside, declared that the sales policy of the National, in permitting a quantity discount to chain stores, but refusing a like quantity discount to a pool or combination of independent retailers, is not an unfair or unlawful method of doing business.

Why The Monitor Blancher?

BECAUSE:

It does not injure the most tender stock.

It will safely give a 30 minute blanch, proving non-injurious.

It gives uniform heat from start to finish.

It discharges used water at feed end, taking in fresh at discharge end, consequently stock is constantly entering clean water.

It discharges stock through clean condensed steam.

It will not choke.

It will not mix.

No other Blancher will stand up to these specifications.

Now is the time to get a low price.

The Foundation of A GOOD LABEL

The design may be beautiful and the inks of the best quality but if the paper isn't right the label will not be right.

A good label must have a good foundation---fine paper. It must be paper that will stay white with age and it must be the right finish for color printing purposes. Also it must have the strength and texture to give maximum production on labeling machines.

We test every lot of paper we receive to make sure that it fulfills all these requirements. We use nothing but the best quality of coated and uncoated papers made for us on our order and always by the same formula.

On this foundation we build---with the taste and skill of long experience---labels that help sell goods.

CONSULT OUR TRADE MARK BUREAU

We maintain a bureau of brands and trade marks for the benefit of our customers. Write us for particulars. The service is free.

SMILE AWHILE

FAMILIAR WORDS

Traffic Cop—Just now one of them swell young cowboys that looks like a collar ad come driving a murder car up here with a flapper alonside of him and while he was waiting for the go-sign he got so fascinated or something gazing at the love-light in her eyes he didn't go when I give it to him. I whistled, and he didn't pay no attention. The guys behind him tooted their horns—nothing doing. I just naturally had to go right up to him to restore him to consciousness, and I says to him:

"Young man, don't you know when to go?"

"Oh, Rudolph," giggles the Jane, "don't that sound for all the world like papa."

SPANKER KNOWS

Young Mr. Spanker
Went to a banker
To borrow a thousand or so.
The banker was wise,
"Do you advertise?
If you do, you'll get the dough."

SLIGHTLY BALLED

Otto—Gee, I made a bad break at dinner last night!

Ditto—Don't tell us the one about the cracked plate!

Otto—No! Mother asked me if I wouldn't have some more corn. I said "Sure!" and passed my glass.—Black and Blue Jay.

KIND-HEARTED GIRL

"And why did old Steppout will that chorus girl half his fortune?"

"She once saved his life."

"Indeed! How?"

"She ignored him one time when he was accompanied by his wife."

GOOD ADVERTISING

Headline—"Laborer Drowns in Alcohol Vat."

Next Day—"Crowd of Unemployed Storms Chemical Plant."

FOOLHARDY

Mrs. Depeck—Poor young Jubbs has been shamefully jilted three times.

Mr. Depeck—He'd better be careful. His luck'll be breaking.

POOR BING!

There was a young fellow called Bing,
You couldn't tell him a thing.
He advertised groceries in a men's magazine,
And now wants to sell his swell limousine.

SPURRING HIM ON

"Why do you refuse him if you want to marry him?"

"Because he has only proposed eleven times so far, and I want him to beat the record."—London Mail.

HORSE TALK

Excited Tourist (beckoning to cabby)—Hey!

Cabby—Look here, mister, stop kiddin' my horse.—Punch Bowl.

OR A CUFF ON THE ARM

Salesman—Dese is a fine soot; all wool but d'buttins. D'ya want belt in d'back?

Customer—No; do you want a kick in d'pants?—Medley.

WEEKLY THOUGHT

Nothing's so hard but search will find it out.—Herrick.

THE CANNING TRADE

THE Journal OF THE Canning AND Allied Industries

ESTABLISHED 1878

FOR 47 YEARS THE CANNED FOODS AUTHORITY

Entered as second class matter at the Post Office at Baltimore, Md. under Act of March 3, 1879.

Vol. 47 | Published at BALTIMORE, (every) MONDAY, AUGUST 18, 1924 | No. 52

American Can

CONTAINERS OF TIN PLATE · BLACK IRON · GALVANIZED IRON · FIBRE

CANCO

How many people eat Canned Foods?

HERE'S some light on the question—from a survey by the U. S. Bureau of Labor Statistics, quoted in National Canners Association Membership Letter No. 66:

ARTICLE	% of all families using article	Av. lb. per family per year
Canned Salmon	60.8	14.4
Milk, condensed or evap.	60.5	102.9
Baked beans, canned	36.1	17.5
Canned peas	55.0	17.6
Canned corn	58.2	17.5
Canned tomatoes	50.2	67.8

There's evidently a vast market open. Millions of Americans do not yet realize the wholesomeness, convenience, economy and nutritive value of canned foods.

The job ahead of us—all of us in the industry—is to build a solid foundation of belief in *quality* canned foods. With that we can look for steady growth in favor and prosperity.

You bend every effort to pack quality foods. We strive to give you our best in Canco service and Canco quality cans that will carry your pack intact to the consumer's kitchen.

With quality foremost, surely more people will be converted to canned foods. The prize is worth trying for, isn't it?

DOUBLE PINEAPPLE GRATER
(WITH HOPPER REMOVED)

MADE BY THE
JOHN R. MITCHELL CO.
Foot of Washington St.
BALTIMORE - MD.

The large-tooth saws, on the upper spindles, coarse grind the fruit which passes down to the fine saws on the two lower spindles, from there it falls into a tub under the machine. Machine is well braced and the workmanship is of the best; gears are cut from the solid, and saws are milled from solid blanks which gives a cutting edge to two sides of the tooth. Hopper and discharge chutes are lined with white pine.

You Need It!

THE man who burns out without insurance realizes his mistake; and the food manufacturer who makes an error in the process times, or methods; or runs afoul of the Food Laws, —when he could have been 'dead-certain' what to do and how to do it, by using this book,—will also see his mistake.

Just a little mistake in process time, method of handling or ignorance about the latest and best way, and losses pile up with sickening rapidity.

WHY TAKE THE CHANCE?

Men don't deliberately produce poor goods, flat sours, slack-filled cans, off-colored, pin-holing, bad-flavored goods. Those losses—in money and reputation—come from 'taking a chance.'

THIS BOOK furnishes the answer to the man who really wants to improve his quality, and have his goods safe and always dependable.

You may think you Do Not Need It---- But the house with this book in the Safe feels a confidence, an-ease-of-mind, which no other $10.00 can buy!!

You Can Be Sure You're Right!

PRICE $10.00 postage prepaid, with order.

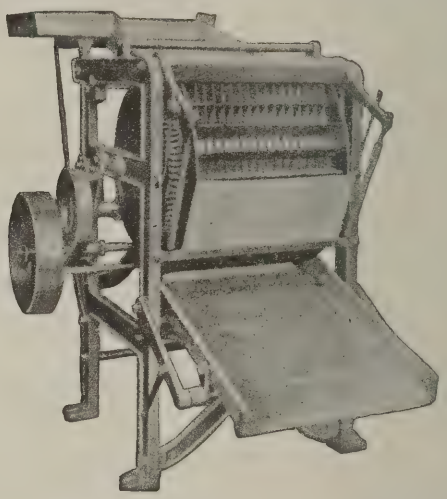
The Anderson FILLER

We took our name from this machine!

We know the kind of machine the canner must have—(we've been building canning machinery for years) and we put into this Filler everything you expect in such a machine.

It fills steadily, fast or slow, every can just as you want it—and all alike—

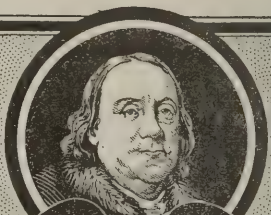


Spinach, Kraut, Tomatoes, String Beans, Pumpkin etc.

THE WILLING WORK-HORSE OF THE CANNERY.

Further details and testimonials, if you wish. But, better still,—Put it to work in your plant this year, on our guarantee.

Anderson Filling Machine Co.
Webster Street, Junction,
ALAMEDA, CALIFORNIA



LEWIS CUTTER
—FOR—
Beans, Okra, Celery, Rhubarb

Attention, Mr. Canner:-If your cutter does not cut old and stringy beans clean, then you should have a Lewis Cutter, which cuts perfectly.

We also build; Pineapple Peelers, Corers, Sizers and Slicers, Power Can Testers for any size cans, up to 5 gallon Oil Cans.

E. J. LEWIS Middleport, N. Y.

You Don't Want the Color of Your Pack Changed

If a weak sugar is used, this may happen. It cannot happen if you

For Your Benefit—

Bear Brand Aprons are made for YOU to save you money in several ways:

Because they are constructed of the finest 8-oz Sea Island Duck, strongly impregnated with pure Para Rubber, they are rip-proof, wear-proof, water and fruit-acid proof. This means a longer period of usefulness than is usually obtainable -- and a consequent reduction in your apron expense.

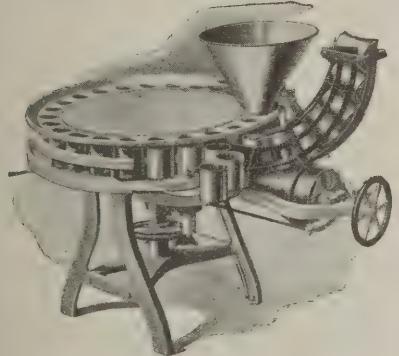
And as Bear Aprons are extremely light in weight (only 15 ounces), they bring your employes perfect comfort, permitting greater working efficiency. A comfortable employe is a better worker.

Many of the largest canners and packers, including H. J. Heinz Co., use our aprons exclusively. Severe tests proved our aprons to be superior and more economical.

COLOR: Dark Maroon
30" x 47" long—$15.50 doz.
34" x 47" long—$16.50 doz.

Send trial order TODAY — and learn how much apron service your dollar can buy. You'll be pleasantly surprised, and your employes will thank you, too, for a better apron.

Samples of fabric, showing quality, on request.



Another popular style: Protexu Brand Rubber Aprons -- slightly heavier than Bear, and black in color. Extremely durable and protective, suitable for all work--even for protection from strongest acids. 30" wide x 38" long, $12.00 doz; 36" wide by 44" long, $15. dozen.

HANSEN FRUIT AND VEGETABLE FILLER

Adjustable for No. 1, 1½, 2, 2½, 3 Cans. Machine also made for No. 10 cans.

Fills Practically Automatically But Produces Hand Pack Quality Beets, String Beans, Tomatoes, Cherries, Berries, Kraut, Etc.

Rockfield, Wis., Nov. 26, 1923.

We are glad to advise that we are very well pleased with the Beet Filler which we purchased from you and used throughout the season. It is a great labor saving device. We used it in connection with No. 2 and No. 3 cans and it gives a good fill. We can only say the best for it.

ROCKFIELD CANNING COMPANY
BY A. J. Klumb.

Sturgeon Bay, Wis., Dec. 1, 1923.

Allow the writer to congratulate you on your Hansen Fruit and Vegetable Filler. As you know, we have been experimenting for the past five years with mechanical fillers for filling No. 2 red sour pitted cherries. Up to this year when we installed two of your fillers, we had never found anything that would operate satisfactorily on cherries but since the success we have had this year with your new filler, we feel that you have a machine which will work very satisfactorily indeed.

The machine operates very smoothly without the jamming of cans and the accompanying loss of fruit and turns out a very uniform fill. We believe your estimate of capacity which you stated was 70 cans per minute to be very conservative, for we know this machine will operate very satisfactory on 95-100 cans per minute on cherries. We expect to put in more of these machines as the necessity arises and you may rest assured that we are perfectly satisfied with their operation.

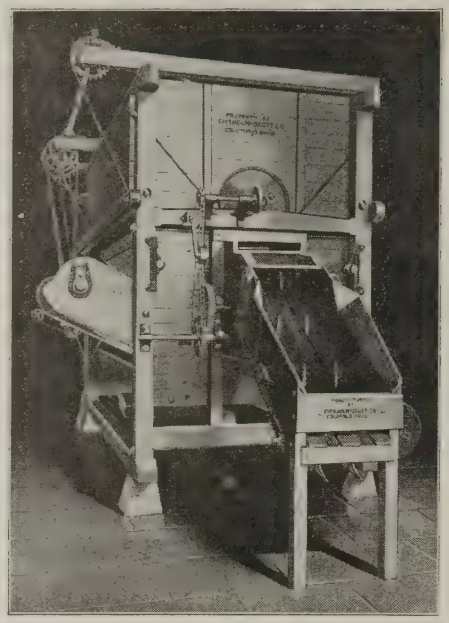
FRUIT GROWERS CANNING COMPANY
BY Edw. S. Reynolds.

Colby, Wis., Nov. 27, 1923.

We wish to advise you that we are more than pleased with the hand bean filler, or rather as you call it, the Hansen Fruit and Vegetable Filler.

We were rather doubtful as to its capabilities until we tried it out. Wish to advise you that your filling hopper on same does not need attention, and with one girl supervising the fill of cans was all the help we needed in the canning of cut beans.

We have been complimented on the uniform fill of our beans and all we can say is we lay it all to your machine.



If you have any skeptics as to the capabilities of your filler, wish you would refer same to me or my superintendent at this plant and am sure we could soon change their opinion.

Edw. Ermold Co., New York City.

CORN COOKER-FILLERS.
Ayars Machine Co., Salem, N. J.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
Morral Bros., Morral, Ohio.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

CORN CUTTERS.
Berlin Cang. Mach. Wks., Berlin, Wis.
Morral Bros., Morral, Ohio.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

CORN SHAKERS (in the can).
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mach. Wks., Berlin, Wis.

CORN HUSKERS and SILKERS.
Berlin Cang. Mach. Wks., Berlin, Wis.
Huntley Mfg. Co., Silver Creek, N. Y.
Morral Bros., Morral, O.
Peerless Husker Co., Buffalo.

Corn Mixers and Agitators. See Corn Cooker Fillers.

CORRUGATED PAPER PRODUCTS. (Boxes, Bottle Wrappers, etc.)
Hinde & Dauch Paper Co., Sandusky, Ohio.

Counters. See Can Counters.
Countershafts. See Speed Regulating Devices.

CRANES and carrying machines.
A. K. Robins & Co., Baltimore.
Sinclair-Scott Co., Baltimore.
Zastrow Machine Co., Baltimore.

CRATES, Iron Process.
Berlin Cang. Mach. Wks., Berlin, Wis.
Edw. Renneburg & Sons Co., Baltimore.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.
Zastrow Machine Co Baltimore.

Cutters, corn. See Corn Cutters.
Cutters, kraut. See Kraut Machinery.
Cutters, string bean. See String Bean Mchy.
Dating Machines. See Stampers and Markers.

DECORATED TIN (for Cans, Caps, etc.).
American Can Co., New York.
Continental Can Co., New York City.
Southern Can Co., Baltimore.
Wheeling Corrugating Co., Wheeling, W. Va.

Dies, can. See Canmakers' Mchy.
Double-Seaming Machines. See Closing Mchs.

DRYERS, drying machinery.
Edw. Renneburg & Sons Co., Baltimore.
Slaysman & Co., Baltimore.

Elevators, Warehouse.
Employees' Time Checks. See Stencils.

ENAMELED BUCKETS, PAILS, etc.
Phil Emrich, Cincinnati.
A. K. Robins & Co., Baltimore.

Engines, Steam. See Boilers and Engines.
Enameled-lined kettles. See Tanks, glass lined.

EVAPORATING MACHINERY.
Anderson Filling Mach. Co., Alameda, Calif.
Berlin Cang. Mach. Wks., Berlin, Wis.
Edw. Renneburg & Sons Co., Baltimore.

EXHAUST BOXES.
Ayars Machine Co., Salem, N. J.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

RUBBER GLOVES, factory.
Wm. Gross, Sharon, Pa.
Phil Emrich, Cincinnati, O.

Factory Stools. See Stools.
Factory Supplies. See Cannery Supplies.

FACTORY TRUCKS.
A. K. Robins & Co., Baltimore, Md.

Fertilizers.

FIBRE CONTAINERS for food (not hermetically sealed).
American Can Co., New York.
Continental Can Co., New York City.
Hinde & Dauch Paper Co., Sandusky, Ohio.

FIBRE PRODUCTS, boxes, boxboard, etc.
Hinde & Dauch Paper Co., Sandusky, Ohio.

Fillers and Cookers. See Corn Cooker-Fillers.
Filling Machines, bottles. See Bottlers' Mchy.

FILLING MACHINES, can.
Anderson Filling Mach. Co., Alameda, Calif.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mach. Wks., Berlin, Wis.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
Karl Kiefer Machine Co., Cincinnati, Ohio.
Huntley Mfg. Co., Silver Creek, N. Y.
A. K. Robins & Co., Baltimore.
Sinclair-Scott Co., Baltimore.
Sprague-Sells Corp., Chicago.

Filling Machine, syrup. See Syruping Machines.

FINISHING MACHINES, catsup, etc.
F. H. Langsenkamp, Indianapolis.
A. K. Robins & Co., Baltimore.
Sinclair-Scott Co., Baltimore.
Sprague-Sells Corp., Chicago.

FLUX
Dewey & Almy Chem. Co., Cambridge, Mass.

Food Choppers. See Choppers.
Friction Top Cans. See Cans, tin.
Fruit Graders. See Cleaning and Grading Mchy., fruit.
Fruit Parers. See Paring Machines.

FRUIT PITTERS and seeders.
Huntley Mfg. Co., Silver Creek, N. Y.

Fruit Presses. See Cider Makers' Mchy.
Gasoline Firepots. See Cannery Supplies.
Gauges, pressure, time, etc. See Power Plant Equipment.

WHERE TO BUY—Continued

GENERAL AGENTS for Machinery Mfrs.
Berlin Cang. Mach. Wks., Berlin, Wis.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

Generators, electric. See motors.
Glass-lined Tanks. See Tanks, glass-lined.
Glue, for sealing fibre boxes.
Governors, steam. See Power Plant Equip.
Grading Mches. See Cleaning and Gr'd'g Mchy.
Gravity Carriers. See Carriers and Conveyors.
Green Corn Huskers. See Corn Huskers.
Green Pea Cleaners. See Cleaning and Grading Mchy.
Hoisting and Carrying Mches. See Cranes.
Hominy Making Machinery.
Hullers and Viners. See Pea Hullers.
Huskers and Silkers. See Corn Huskers.
Ink, can stamping. See Stencils.

INSURANCE, canners'.
Canners' Exchange, Lansing B. Warner, Chicago.

Jacketed Kettles. See Kettles, copper.

JACKETED PANS, steam.
F. H. Langsenkamp, Indianapolis, Ind.

Jars, fruit. See Glass Bottles, etc.
Juice Pumps. See Pumps.
Kerosene Oil Burners. See Burners.
Ketchup Fillers. See Bottlers' Mchy.

KETTLES, copper, plain or jacketed.
F. H. Langsenkamp, Indianapolis, Ind.

Kettles, enameled. See Tanks, glass-lined.

KETTLES, process.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mchy. Works, Berlin, Wis.
Edw. Renneberg & Sons Co., Baltimore.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.
Zastrow Mchy. Co., Baltimore.

KNIVES, miscellaneous.
A. K. Robins & Co., Baltimore.
Phil Emrich, Cincinnati, O.

Kraut Cutters.
A. K. Robins & Co., Baltimore.

LABELING MACHINES
Edw. Ermold Co., New York City.
F. H. Knapp Co., Yonkers, N. Y.
Morral Bros., Morral, Ohio.

LABEL Manufacturers.
H. Gamse & Co., Baltimore.
R. J. Kittredge & Co., Chicago.
Simpson & Doeller Co., Baltimore.
Stecher Litho. Co., Rochester, N. Y.
U. S. Prt. & Litho. Co., Cincinnati.

LABORATORIES for analysis of goods, etc.
National Canners Asso., Washington, D. C.

Markers, can. See Stampers and Markers.

MARKING INK, pots, etc. See Stencils.

Phil Emrich, Cincinnati.
Marmalade Machinery. See Pulp Machinery.
Meat Canning Machinery.
Meat Choppers. See Choppers.

MILK CONDENSING & CANNING MCHY.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mchy. Works, Berlin, Wis.
A. K. Robins & Co., Baltimore.
Zastrow Mchy. Co., Baltimore.

Molasses Filling Machines. See Filling Machines.
Nailing Machines. See Box Nailing Machines.

OYSTER CANNERS' MACHINERY.
Berlin Cang. Mchy. Works, Berlin, Wis.
Edw. Renneburg & Sons Co., Baltimore.
A. K. Robins & Co., Baltimore.
Zastrow Mchy. Co., Baltimore.
Packers' Cans. See Cans.
Pails, tubs, etc., fibre. See Fibre Containers.
Paper Boxes. See Corrugated Paper Products.
Paper Cans and Containers. See Fibre Containers.
Paring Knives. See Knives.

PARING MACHINES.
Phil. Emrich, Cincinnati, O.
Sinclair-Scott Co., Baltimore.

PASTE, canners'.
Continental Mfg. Co., Philadelphia.
Dewey & Almy Chem. Co., Cambridge, Mass.
Edw. Emrnold Co., New York City.
A. K. Robins & Co., Baltimore.

PEA and BEAN SEED.
D. Landreth Seed Co., Bristol, Pa.
Rogers Bros. Seed Co., Chicago.

PEA CANNERS' MACHINERY.
Berlin Cang. Mchy. Works, Berlin, Wis.
Ayars Machine Co., Salem, N. J.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
Huntley Mfg. Co., Silver Creek, N. Y.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.
Pea Harvesters. See Farming Machinery.

Pea Hullers and Viners.
Chisholm Scott Co., Columbus, O.
Frank Hamachek, Kewaunee, Wis.

Pea Vine Feeders.
Chisholm Scott Co., Columbus, O.
Frank Hamachek, Kewaunee, Wis.

PEELING KNIVES.
Phil. Emrich, Cincinnati.
A. K. Robins & Co., Baltimore.
Peach and Cherry Pitters. See Fruit Pitters.

PEELING MACHINES.
Sinclair-Scott Co., Baltimore.

PEELING TABLES, continuous.
Ayars Machine Co., Salem, N. J.
A. K. Robins & Co., Baltimore.
Berlin Cang. Mchy. Works, Berlin, Wis.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.
Perforated Sheet Metal. See Sieves and Screens.
Picking Boxes, Baskets, etc. See Baskets.
Picking Belts and Tables. See Pea Canners' Mchy.

PINEAPPLE MACHINERY.
E. J. Lewis, Middleport, N. Y.
John R. Mitchell Co., Baltimore.
Stevenson & Co., Baltimore.
Zastrow Mchy. Co., Baltimore.
Platform and Wagon Scales. See Scales.
Picking Belts and Tables. See Pea Canners'.

PITTING SPOONS, coring hooks, etc.
Phil Emrich, Cincinnati.

POWER PLANT EQUIPMENT
Power Presses. See Canmakers' Machinery.
Power Transmission Mchy. See Power Plant Equipment.

PRESERVERS' MACHINERY.
Karl Kiefer Machine Co., Cincinnati, Ohio.

PULP MACHINERY.
Berlin Cang. Mchy. Works, Berlin, Wis.
F. H. Langsenkamp, Indianapolis.
A. K. Robins & Co., Baltimore.
Sinclair-Scott Co., Baltimore.
Sprague-Sells Corp., Chicago.

PUMPS, air, water, brine, syrup.
Ams Machine Co., Max, New York City.
F. H. Langsenkamp, Indianapolis.
A. K. Robins & Co., Baltimore.
Retort Crates. See Kettles, process.
Retorts, steam. See Kettles, process.

RHUBARB CUTTER
Rubber Stamps. See Stencils.
Saccharometers (syrup testers). See Cannery Supplies.

SEALING MACHINES, Box.
McStay Machine Co., Los Angeles, Cal.
Sanitary Cleaner and Cleaner. See Cleaning Compounds.
Sanitary (open top) cans. See Cans.
Sardine Knives and Scissors. See Knives.

SCALDERS, tomato, etc.
Ayars Machine Co., Salem, N. J.
Huntley Mfg. Co., Silver Creek, N. Y.
F. H. Langsenkamp, Indianapolis.
Edw. Renneburg & Sons Co., Baltimore.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.
Scalding and Picking Baskets. See Baskets.
Scrap Bailing Press.
Screw Caps, bottle. See Caps.
Sealing Machines, bottle. See Bottlers' Mchy.
Sealing Machines, sanitary cans. See Closing Machines.

SEEDS, canners', all varieties.
D. Landreth Seed Co., Bristol, Co.
Rogers Bros. Seed Co., Chicago.
Separators. See Pea Canning Mchy.

SEALING MACHINES, CANS, see Closing Machines.

SHEET METAL WORKING MACHINERY.
Ams Machine Co., Max, New York.
E. W. Bliss Co., Brooklyn, N. Y.
Cameron Can Mchy. Co., Chicago, Ill.
Seattle-Astoria Iron Works, Seattle, Wash.
Slaysman & Co., Baltimore.
Stevenson & Co., Baltimore.
Shooks. See Boxes, Crates, etc.

SIEVES AND SCREENS.
A. T. Ferrell & Co., Saginaw, Mich.
Huntley Mfg. Co., Silver Creek, N. Y.
N. Y.
Sinclair-Scott Co., Baltimore.

SILKING MACHINES, corn.
Huntley Mfg. Co., Silver Creek, N. Y.
Sprague-Sells Corp., Chicago.
Slicers, fruit and vegetable. See Corers and Slicers.
Sorters, pea. See Cleaning & Grading Mchy.

SPEED REGULATING DEVICES (for Machines, belt drives, etc.).
Sinclair-Scott & Co., Baltimore.
Huntley Mfg. Co., Silver Creek, N. Y.

STAMPERS AND MARKERS.
Ams Machine Co., Max, New York City.
Steam Cookers, continuous. See Cookers.
Steam Jacketed Kettles. See Kettles.
Steam Pipe Covering. See Boiler and Pipe Covering.
Steam Retorts. See Kettles, process.

STENCILS, marking pots and brushes, brass checks, rubber and steel type, burning brands, etc.
A. K. Robins & Co., Baltimore.

STIRRERS FOR KETTLES.
F. H. Langsenkamp, Indianapolis.

STRING BEAN MACHINERY.
Berlin Cang. Mchy. Works, Berlin, Wis.
Chisholm-Scott Co., Columbus, Ohio.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
Huntley Mfg. Co., Silver Creek, N. Y.
E. J. Lewis, Middleport, N. Y.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

Supplies, engine room, line shaft, etc. See Power Plant Equipment.
Supply House and General Agents. See General Agents.
Switchboards. See Electrical Appliances.

SYRUPING MACHINE.
Anderson Filling Mach. Co., Alameda, Calif.
Ayars Machine Co., Salem, N. J.
Karl Kiefer Machine Co., Cincinnati, Ohio.
A. K. Robins & Co., Baltimore.
Sprague-Sells Corp., Chicago.

Tables, picking. See Pea Canners' Mchy.

TANKS, METAL.
Berlin Cang. Mchy. Works, Berlin, Wis.
F. H. Langsenkamp, Indianapolis.
Slaysman & Co., Baltimore, Md.

TANKS, glass-lined steel.
F. H. Langsenkamp, Indianapolis, Ind.

TANKS, WOODEN.
Balto. Cooperage Co., Baltimore.
Testers, can. See Canmakers' Mchy.
Ticket Punches. See Stencils.
Time Controllers, process. See Controllers.
Tin Lithographing. See Decorated Tin.
Tipping Machines, See Capping Machines.

TOMATO CANNING MACHINERY.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mchy. Works, Berlin, Wis.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
Huntley Mfg. Co., Silver Creek, N. Y.
A. K. Robins & Co., Baltimore.
Sprague Cang. Mchy. Co., Chicago.

TOMATO PEELING MACHINE.
A. K. Robins & Co., Baltimore.

Tomato Seed. See Seeds.

TOMATO WASHERS.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mach. Wks., Berlin, Wis.
F. H. Langsenkamp, Indianapolis.
A. K. Robins & Co., Baltimore.
Souder Mfg. Co., Bridgeton, N. J.
Sprague-Sells Corp., Chicago.

Transmission Machinery.

TRANSPLANTING MACHINE
Trucks, Platform, etc. See Factory Trucks
Tumblers, glass. See Glass Bottles, etc.
Turbines. See Electrical Machinery.
Variable Speed Countershafts. See Speed Regulators.
Vegetable Corers, etc. See Corers and Slicers
Vegetable Parers. See Paring Machines.
Viner Feeders. See Viners and Hullers.

VINERS AND HULLERS.
Chisholm-Scott Co., Columbus, O.
Frank Hamachek, Kewaunee, Wis.

Washers, bottle. See Bottlers' Machinery.
Washers and scalders, fruit, etc. See Scalders.

WASHERS, can and jar.
Ayars Machine Co., Salem, N. J.
Berlin Cang. Mchy. Works, Berlin, Wis.
Hansen Cang. Mchy. Corp., Cedarburg, Wis.
A. K. Robins & Co., Baltimore.
Washing and Scalding Baskets. See Baskets.
Windmills and Water Supply Systems. See Tanks, wood.
Wiping Machines, can. See Canmakers' Mchy.
Wire Bound Boxes. See Boxes.
Wire Scalding Baskets. See Baskets.

WIRE, for strapping boxes
Wrappers, paper . See Corrugated Paper Products.
Wrapping Machines, can. See Labelling Mchy

WYANDOTTE—Sanitary Cleaner.
